

## Apple sets big Mac on IBM

by Robert Parry  
APPLE is back in the battle for office micros. Tuesday saw the launch of the eagerly-awaited Macintosh, plus a revamp of Lisa at just over half its present price.

With Macintosh, Apple is out to claw back from IBM the pole position among micro makers. It is banking on applications software already selling fast on the IBM PC to boost the hardware which, like Lisa, breaks the IBM-PC mould.

Microsoft's Multiplan spreadsheet is already available in a version tailored to fit the Macintosh environment, and Lotus's 1-2-3 is imminent.

Macintosh hardware, as expected from the persistent leaks from the 100 or so software houses that have been playing with Macintosh over the past year, is very much along the same lines as Lisa, but a lot cheaper.

It is built around a single 50-chip logic board carrying the 68000 processor, 128K of RAM and 64K of ROM holding the operating system, graphics subsystem and toolbox software to tie in applications.

Like Lisa, it has a high resolution black and white screen - nine inches diagonal on Mac rather than Lisa's 12-inch screen - to give the graphic desktop display. Mass storage comes from a single in-built floppy drive, a 3½-inch unit modified by Sony to Apple's specifications. By running it at a variable speed, 400 Kbytes can be fitted on to standard Sony-style hard-jacketed media.

These are boxed in a tall unit - in save on desk space - which with the keyboard and mouse weighs 20lb, well in the "transportable" weight range.

A link box to IBM network controllers, to be called Apple-

Line, will be available soon.

Application writers have around 500 calls into the toolbox firmware to integrate packages into a standard Macintosh environment.

Apple is using a carrot rather than a stick to get them to write application packages in the standard way, says chairman Steve Jobs, who believes people are rejoining in using the toolbox and "connecting the dots in the ROM".

Language dependence in applications is kept apart, allowing easy translation of packages for different national markets.

With the operating systems software and, for the first three months at least, the word processing MacWrite and graphics MacPaint packages thrown in, Macintosh will sell for \$2,495. The UK price is not yet fixed, and will depend on the dollar rate when shipments start.

Three new Lisa models are set to arrive in the UK before Macintosh, which sits at the bottom end of a four-machine Apple 32 System line. A stripped down Lisa 2, with 512K of RAM and no Winchester disc costs \$3,500.

A five Mbyte version, a direct replacement for the now defunct original Lisa, which sells for \$8,200 in the US, costs \$4,500, and a 10 Mbyte internal Winchester machine will sell for \$5,500. UK shipments should start next month.

Like Macintosh, all the Lisas have a single in-built modified Sony microfloppy, now the exclusive transfer medium among the 32 system family.

Software is upwards compatible, so Macintosh applications will run on Lisa 2, exploiting the extra memory available.

Macintosh will be sold through all authorised Apple dealers.

## Polls aid is all in family

by John Kavanagh  
A NEW software firm with a nine-year-old trainee programmer and a prospective company secretary aged five has claimed a UK first with its inaugural product.

CT Software (Wokingham) has launched an £11 package called Electronic Polling Day, which helps political parties ensure that all their supporters turn out to vote. The first order has come from the Wokingham Liberals in Berkshire and there has been "lots of interest countrywide", according to a company spokesman.

CT Software was formed by Norman Collins-Tooth, who works in training for a UK computer firm. His wife, Margaret, a former programmer at UK firm Business Computers, is managing director.

Their children, Christopher and Nicholas, are listed as the other joint proprietors.

"We bought Christopher an Oric microcomputer last summer and he's very interested," says

Margaret Collins-Tooth. "He has learnt Basic programming at home. Nicholas wants to be the company secretary but her typing's not up to scratch yet."

"We want to involve the children. Their views on what we are doing could be a great help."

Norman Collins-Tooth, a member of the local Liberals, developed the package for the Oric, Sinclair Spectrum and BBC computers.

Convincing returns are entered so all potential supporters' votes are stored. On polling day, poll numbers can be entered as people vote. The system can then produce lists of supporters, who have not voted so party members can go and remind them or offer them lifts to the polling stations.

The package can also display the likely result of the election using the canvass returns or the poll numbers of those who have voted so far.

Margaret Collins-Tooth says she knows of no competitive package.

BAKER... His comments seem to leave Butcher on a limb...

## Baker corrects Butcher's view

by John Kavanagh  
THE UK is facing up to the problems of moving from the older industries to the new with greater realism than at any time since the war, said Information Technology Minister Kenneth Baker last week.

Delivering the London Business School's Stockton lecture, he said these new technology industries would provide the main source of growth and new jobs over the next 25 years. Baker repeated the government's view that most of these jobs would be in service industries. But this time there was also a good word for manufacturing.

"It would be very easy to write-off manufacturing," he said. "But it is impossible to envisage the British economy without a large element of manufacturing employment. There is growing evidence that as we pull out of the recession, manufacturing companies will share in the recovery."

Computers would not only increase the number of jobs in certain fields; they would also increase the number of occupations. There would be a great need for training and re-training as the UK went through this "deep structural change" - but this change was vital if the new sources of national wealth were to emerge. The change would bring more leisure time and demand new social patterns.

Baker's comments, which reflect government policy, seem to leave industry under-secretary John Butcher out on a limb. Earlier this month Butcher told his local Coventry constituency that it was "foolish and misguided" to talk about information technology as the panacea for industry and heralding an age of leisure.

Butcher said that information technology would not change working patterns; indeed, 1984 would be a year of growing overtime.

The UK is now Europe's biggest consumer of integrated circuits, which means more sophisticated equipment is made here than anywhere else in Europe, said Kenneth Baker when he opened Ferranti Electronics' new factory in Oldham, Lancashire, last week.

BUTCHER... "Misguided."

## Burroughs replaces B6900 mainframe line

by Dave Madden  
BURROUGHS yesterday announced a replacement for its B6900 mainframe line.

The machine, called the A9, uses emitter-coupled logic (ECL) technology. Burroughs rates the machine at three mips, and says that the A9 takes only half the power space and cooling of the current 1.5 mips B6900, which will be phased out this quarter.

At the top end, a 12 Mbyte A9F will cost around \$600,000. Main memory can be expanded to 24 Mbytes in increments of 6 Mbytes.

AMDAHL... Attracted \$100m.

## Trilogy super computer suffers setback

by Dave Madden  
TRILOGY has run into trouble in the development of its new circuit technology which will delay the introduction of its supercomputer.

The company has announced that the final metalisation layer on the first prototype of its "waterfall" semiconductor is overheating and shorting. It said that this will put back first shipments of the Trilogy machine from the summer to the fourth quarter of 1985.

A spokesman said last week: "We had hoped the layer would function properly, but the problem is not insurmountable."

A revised metalisation phase will be implemented within a month, and Trilogy should know if it has worked by the end of March.

The news will be a blow to DEC, which intends to use Trilogy's technology as the basis of a new generation of Vax machines.

Prototyping set-backs appeared inevitable given the nature of the circuit integration that Trilogy is

attempting to get from its 2½-inch devices.

But the delay does emphasise the risk that investors in Trilogy have taken. Trilogy's plans, said Gene AMDahl's reputation, have attracted more than \$100 million. Sperry bought a 15% stake in the company, and an option on the technology for \$42 million, while DEC is in for 9% and a similar option, for \$26 million.

### TAKE A DIFFERENT VIEW OF DL/1

Altergo Products' FQS Friendly Query System allows you to view your corporate data in a new way.

Access is completely ad-hoc and performed by end-users - with no reference to data processing, and with complete security. DL/1 and IMS/VS databases as well as conventional VSAM and ISAM files are accessed directly online.

FQS runs on IBM mainframes through CICS/VS and SHADOW II so provides an ideal extension to your existing teleprocessing applications or is an immediate benefit to new users.

Call us today for further information.

## Tebbit prepares to meet IBM president Opel

by George Black  
SECRETARY OF State Norman Tebbit will meet IBM president and chief executive officer John Opel in New York next Friday to discuss its trading policy with the UK.

It is virtually certain that he will protest to Opel about IBM's recent letter to UK customers on their obligation to notify the American authorities of movements of their machines between end-users.

But trade officials in London stressed that the meeting had been arranged before the IBM letter fuelled the extra-territoriality dispute.

They said it was regular practice for secretaries of state visiting the US to contact the corporate headquarters of major investors in the UK.

On the same day Tebbit will meet the chairman of the New York Stock Exchange, William E. Blanton, and other leading industrialists.

In a five-day visit he will have talks with US Commerce Secretary Malcolm Baldrige in Washington which will cover the new US Export Administration Act. He is also likely to seek support from a number of officials, senators and congressmen for the British case against a clampdown in technology trade.

The Defence Department has been pressing for much tighter controls to be implemented in the new Act.

Tebbit will be addressing the US Chamber of Commerce, the Washington Export Council and the British-American Chamber of Commerce with speeches which will sum up the British computer community's case for free and fair trading conditions.

In the spring Tebbit is expected to go to California in a bid to strengthen trade links with Los Angeles and San Francisco - but it is not yet known if he will visit Silicon Valley.

When he called at the American Embassy in London last week to outline his intentions, Tebbit is said to have played down the technology trade issue and indicated that other issues such as steel were more on his mind.

But he will be keen to take the chance for a strong representation on the new Export Act, as it has been laid open for public comment until the middle of February.

In the spring Tebbit is expected to go to California in a bid to strengthen trade links with Los Angeles and San Francisco - but it is not yet known if he will visit Silicon Valley.

## US banks go for Chaps clearing

THE two largest US banks, Citibank and Bank of America, will take part in the electronic clearing system, Chaps, due to be launched by British clearing banks on February 9. The decision contradicts advice from the American Bank's Association of London.

## Cobol in decline

THE decline of the Cobol language may have started, according to the Computer Weekly/Datapro user satisfaction survey published this week (pages 16-17). Results of the survey, based on over 1,000 user responses, suggests that fewer users program in RPG, but that Basic, Assembler, PL/1 and Fortran are more frequently used than last year.

## Bell to lecture

GORDON Bell, the man behind the design of many of Digital Equipment's most successful minicomputers, will give the second BCS Jubilee Lecture, which is sponsored by Computer Weekly. Bell, who joined Encore Computer Corp in July 1983 as chief technical officer, will talk on computer evolution. His lecture will take place on Wednesday, March 14, at the Royal Society, London.

BELL... To give lecture.

O'CONNOR... "There will be less red tape."

## CCTA promises autonomy

by John Riley  
THE newly installed head of the CCTA's office automation division has promised more autonomy to local managers in deciding which equipment they buy.

Michael O'Connor, whose move to the Central Computer and Telecommunications Agency (CCTA) was announced this week, also says that there will be less red tape when the public sector buys office automation systems in the future.

"There will be a progressive shift of responsibility from the centre to the departments so that when buying office automation systems local managers will make their own decisions," O'Connor says.

The CCTA is the government's own information technology advisory body, and says, says O'Connor, encouraging devolution of responsibility in line with the wider government Financial Management Initiative programme.

However, the transfer of responsibility away from the centre does not mean that the CCTA will collapse.

## ICL users demand price lucidity

by John Riley  
ICL USERS are demanding a clarification from ICL on the way it is pushing through its latest round of software service and licence price increases.

Chairman of the ICL User Group, John Atkin, says that "ICL's announcement is vague, and the way of working out the amount payable is complicated; I don't understand how the prices are being worked out".

ICL's announcement of the price changes was made in December, but many users still do not know how they will be affected.

The most complicated area concerns 2900 users, where software service and licence increases and hardware maintenance costs decrease vary from product to product.

ICL said last December that salesmen would visit each 2900 VME installation and work out the new charges on site. However, they have been late doing that, and users are getting impatient.

For users other than 2900 users, ICL announced that it was making a 10% increase in software service charges. That announcement has annoyed System 10 and System 25

users, who had a 5% increase in software charges last summer.

In addition, ICL has made special deals available to users of the ageing 2903 and 2904 machines, as well as the System 10, as well as 120 and 220 users, where maintenance charges are pegged for the processors alone, as long as users take out two year contracts. These machines are also those most widely serviced by Third Party Maintenance Companies (TPMs).

Atkin says that "ICL should have sent a salesman round in every user as promised before Christmas but that didn't happen. What I'm afraid of is that the first users are going to know about the increases is when they get their quarterly bill at the end of February. By then it will be too late."

"Some people will be horrified and some will be relieved. I see increases overall ranging from 0 to 30%, with in some cases, even decreased bills," he adds.

The third party maintenance companies believe that the charges are aimed at them in part. Keith Meadows, managing director of the prominent DPC Holdings, recently made a submission to the

## Second magazine makes Acorn see red

by John Kavanagh  
A SECOND magazine is in trouble with UK microcomputer firm Acorn Computers for showing how to copy programs from cassette tape to disc. But this time there is an extra twist, for the magazine, *Acorn User*, is being taken over by a publishing company part-owned by Acorn founder Chris Curry.

In December Acorn took *Personal Computer World* to the High Court to prevent it publishing a similar article. The magazine paid £65,000 in an out-of-court settlement and was then able to sell the issue.

But *Acorn User* had already been distributed before Acorn heard of its article. "It was too late for us to do anything about it," says David Johnson-Davis, managing director of Acorn's Acornsoft software subsidiary. "We are understandably upset about it. We have consulted our solicitors and we are now thinking about what to do."

These articles have appeared just as Acornsoft has introduced an offer to take back cassette versions of its programs in exchange for half-price disc versions.

The magazines point out that details of how to make the copies were already on the Micronet 800 software and information service, available through the national Prestel videodata network.

Curry's new publishing firm, Redwood Publishing, has been set up with former *Daily Express* editor, Christopher Ward. It expects to have 10 journals by the end of the year.

Johnson-Davis says Curry's investment will not affect any Acorn action against *Acorn User*. And *Acorn User* editor, Tony Quinn says Acorn will have no influence over the magazine.

NIXON... "It is IBM's concern to play a closer role in higher education."

## IBM aims to flood the schools

by Philip Hunter

IBM UK has launched a multi-million pound programme to spread its name and computers through British schools and colleges, and IBM Europe is set to give away 1,300 Personal Computers to educational establishments.

IBM UK chairman, Sir Eddie Nixon, last week committed the company to a £3.2 million programme to help schools and universities develop computer-aided education, with further announcements expected to bring the investment up to at least £10 million over the next four years.

The main part of the initial programme is a £2 million joint project with Cambridge University's engineering department, to bring computers into the lecture theatre for applications like electronics blackboard and animation.

IBM is investing £2 million in this project over three years. It will spend £400,000 more giving away 92 Personal Computers to 67 selected colleges and polytechnics, plus a further £800,000 sponsoring projects involving the PC in schools.

The Cambridge University project is the first under IBM's recently announced "IBM Institute" programme and Nixon says that more such collaborative ventures will follow.

"It is IBM's concern to play a closer role in higher education," he says. But it is clear that the strategy is part of a worldwide programme to make students familiar

with IBM hardware, and therefore more likely to continue as IBM users afterwards. Cambridge University is already a big IBM mainframe user.

Other major computer-makers have recently moved to increase their share of the education market by announcing price cuts or giving away software. Apple and Commodore recently announced price cuts of around 30% to schools, while Research Machines in giving away around £2,000 worth of software to schools buying its network system.

Apple UK says it is considering a plan along similar lines to IBM's to establish itself in universities. "We would leave the application areas open to universities and perhaps offer a discount on our hardware," says a spokesman.

Apple's Lisa and Macintosh computers would be involved in the scheme, rather than the ageing Apple II, 2,000 to 3,000 of which have already been supplied in UK schools and colleges.

ICL has no scheme to collaborate directly with universities in development of computer-based course material, but for several years has been supporting individual research projects through its University Research Council. Like its competitors, the company is looking at ways of getting more computers into colleges, but has lost interest in the schools market.

ICL recently sold to Acorn a subsidiary that specialised in education software for schools.

## Lords speed through Cable Bill amendments

by our Parliamentary Correspondent

THE Lords have made a quick start to the committee stage of the Cable and Broadcasting Bill, getting through amendments to the first eight clauses in the first sitting.

But peers admitted that they did not understand many of the technical issues involved, and that parliament was really legislating, if not in the dark, then at least in the twilight.

Noble Lords confessed that they had very little knowledge of how cable operators would carry out their tasks. But Lord Elton, Under Secretary at the Home Office, said it was already clear that few programmes would be originated by the cable operators themselves.

Programme services would be offered to cable operators on a national scale by a number of new companies or consortia, he said.

An indication of those companies which had banded together could be gained from the published list of 10 or 11 pilot projects approved in December 1983.

Elton gave Lord Aylesford a pleasant surprise by accepting his amendment to limit the size of the Cable Authority to no more than 10 members. Elton said that the Home Secretary had intended from the start to have just a chairman, deputy and five others.

Elton explained that only services broadly comparable with broadcast TV and radio would need a licence from the cable authority. Other services, closer to printed publishing than to television, like Prestel for example, would need no licence.

But they would still be covered by the general laws on obscenity and libel.

Elton described the idea of licensing printed newspapers as Orwellian, and said that it would be inconsistent to compel operators offering only electronic news to have a licence, and not newspapers.

The Lords was also at committee stage on the Telecommunications Bill. Opposition peer, Lord Bruce of Donnington, is trying to introduce a new clause to the Bill to provide for the setting up of a Telecommunications Council for referral of disputes arising from decisions taken by the Director of Telecommunications.

## Welsh sell US arm to terminal maker

by John Riley

APPLIED Digital Data Systems (ADDS), a leading US terminal manufacturer, last week bought Welsh company Data Type Terminal's US operation for \$700,000 and royalties.

ADDS will now manufacture and market Data Type's Auto-graph X-Series of Teletypes and Teletext compatible graphics terminals in the US. This will give ADDS the product it needs to take on its arch-rival, terminal market Teleview.

"We have closed our US operation, transferred the staff to ADDS, and passed out our complete distributor network for the X-Series," confirms Gerry Tufts, chairman of Cwmbran-based Data Type. The company has been selling 40 to 50 terminals in the US each month, but expects to gain from ADDS' sophisticated mass production facilities.

"Data Type gets \$700,000 as a lump sum and a royalty on each machine sold," adds Tufts. "We have plans to develop jointly one and probably two new products based on Data Type's graphics expertise and ADDS product engineering."

However, Tufts has not closed all his options in the US. He intends to continue to market an option board for Teletype graphics through a separate distribution network. Data Type will still manufacture terminals at Cwmbran for the UK market, which takes about 100 terminals a month. Ironically, the UK company is also Teletype's largest distributor in the UK.

David Laws, ADDS president and chief executive, says: "This is part of our strategy for acquiring product lines developed by others as technical platforms. We are looking for companies with good products, but which are faltering because of poor marketing."

Laws is using that strategy to expand into all sectors of the terminal market. Until now, ADDS, a wholly-owned subsidiary of NCR, has produced terminals using only teletype protocols. It recently moved towards the IBM 3270 compatible market with Viewpoint 78, which uses a separate converter.

Ultimate systems division sold 30 hardware systems based on its own peripherals and Magnuson processors. Meanwhile Ultimate was also selling distribution industry software on Digital Equipment Corporation's minicomputers. And its success in the IBM compatible processor market led it into the IBM software business — which brought the takeover of Global Software.

Global specialises in general accounting packages and competes with big firms like Management Science America and McCormack and Dodge.

Ultimate had sales of \$14 million in 1983 — including \$3.2 million worth of Magnuson processors and Storage Technology peripherals. This year it expects to more than double that to \$31 million, with \$8.6 million worth of hardware.

"We are getting substantial development funds," says George Pilmann, head of Ultimate. "And we're looking for more products. We want to expand all sides of our business into Europe."

## Bristol opts out of software centre

by John Riley

BRISTOL University plans to opt out of the South West Universities Regional Computing Centre (SWURCC) at Bath, a major UK software and networking development centre. But it could miss out on government cash in the future.

Bristol has approached the Computer Board, which finances university and regional computer centres, about splitting off from the twin ICL 2980 mainframe facilities it shares at the independent centre with four other universities.

However, a questionmark hangs over what Bristol stands to gain by the move, as there is not enough cash in the kitty to boost its own local facilities. The situation also raises fears about the long term future of SWURCC itself.

Last year SWURCC came under close scrutiny by a committee set up by the Computer Board, headed by Geoff Manning, director of the Rutherford-Appleton laboratory. The resulting internal report recommended that SWURCC should keep going but that it would have to lose staff.

The Manning report also dashed any hopes that SWURCC may have had about becoming a national computing centre like the two at Manchester and London. But it recommended that SWURCC should get £6 million from the Computer Board over the next 10 years.

SWURCC has many tie-ups with industry for contract research work. It was a pioneer in packet-switched networks and is currently working on several development projects for ICL, including building the Unix operating system into a VME environment.

Bristol is cagey about its reasons for wanting to leave SWURCC. "We've had a good service from it," says Alan Grant, head of Bristol University's computer centre, "and we wouldn't want to imply

that we're unhappy with it. But our decision is linked to where we go in the future."

Grant, who is not wishing to comment further, adds that Bristol does not make as much use of SWURCC as it used to. Bristol currently has links with the London University Computer Centre, which has a Cray 1 supercomputer.

However, if Bristol hopes to get a cut out of the grant allocated to the south-west region to compensate it may be disappointed, as the Computer Board is siphoned for cash at present.

"If Bristol were to withdraw in 1986, it would want finance to improve local facilities," says Computer Board secretary Edwin Herbert. "The Computer Board would consider it as a local case, but the demands on the capital budget are very tight."

"It costs as much to keep open a regional centre for four users as for five," he adds.

that we're unhappy with it. But our decision is linked to where we go in the future."

"It costs as much to keep open a regional centre for four users as for five," he adds.

## Amdahl boosts its mainframes

PLUG compatible manufacturer Amdahl has introduced a device which, it claims, boosts the processor performance of its 580 large scale mainframes by up to 35%.

Called an accelerator, it is designed to let users upgrade their systems temporarily to cope with peak loads or provide back-up. The company says that it is unique, and can save users the expense of installing additional CPUs, which may only be needed on rare occasions.

Tony Whalley, Amdahl's services manager, explains that the device works by using software techniques to modify pipeline operations, and achieve optimal processor performance. It will allow a model 5840 to reach the performance of the next machine up in the range.

The accelerator is activated or turned off by single console commands. It was originally pioneered on the company's 470 series.

Users cannot use the device as a permanent upgrade because of an hourly charge for its use, which makes it prohibitively expensive, says Whalley.

## Pick gets a European boost

by George Black

THE Pick operating system is to get a European boost as a result of a \$2.8 million deal between French hardware maker Bull and the US Ultimate Corporation.

In the past Ultimate has bought the hardware for its turnkey Pick-based system from Honeywell in the US, which has caused some difficulties with local support. But

now Ultimate has signed its first contract with the Paris group for the supply of minicomputers over the next four years.

The move follows the ending of an exclusive licence from author Dick Pick to French systems house Intertechnique to handle his software. The French company had made little impact on the Continent with Pick. Until now

Ultimate has sold only about half a dozen systems in Europe. But now there are plans to set up European distribution channels, beginning in Scandinavia.

The hardware will be maintained by Bull and the software by Ultimate's UK distributor, Universal Computers (UCL), of London.

UCL managing director Nick Drescher says it is logical to start the expansion through Scandinavia, where the Microdata Reality machine is already strong.

McDonnell Douglas's subsidiary, Microdata (formerly CMC), runs Pick on its Reality system and had tried to prevent it being spread by its author on to other machines. But the attempt failed and the operating system was later made available on the Honeywell DPS6/Level 6 hardware adopted by Ultimate. Drescher himself is an ex-Microdata employee.

## Prime buys IBM-like plans and sits on them

by Keith Holder

MINI-MARKET Prime has bought IBM compatible hardware designs but claims to have no plans to use them.

The company has made a \$200,000 non-exclusive deal with American US micro manufacturer Computer Devices for its designs for an IBM-PC lookalike.

A spokesman for Prime says that there are no plans to use the technology for any particular product at present. He adds: "We simply felt it was an excellent opportunity to acquire good technology at a very good price, and we acted on that."

The deal covers mother board and RAM designs and ROM source code. It includes a 5 1/4 inch floppy disc drive adaptor, which Computer Devices recently developed in a bid to make its micros

compatible with off-the-shelf IBM-PC software diskettes.

The company filed for protection under Chapter 11 in the US court, and backing was withdrawn before the product could be brought to market.

According to Computer Devices' president, Robert Moore, the deal with Prime is part of a company plan to license technology used on its machines.

The deal authorises Prime to use or sub-contract the use of the design.

Although Prime has denied any intention to use the Computer Devices designs to develop its own IBM compatible micro, Steven Selzer, the company's group manager for workstations, says that the company regards the technology as very important, and will pursue it vigorously.

## Magnuson comes back from the brink

by John Kavanagh

US MANUFACTURER Magnuson Computers has come back from the edge of bankruptcy and is ready to start full trading in the IBM compatible processor market again. And one of its mainstay customers will be the huge US peripherals firm, Storage Technology, which has great ambitions in the packaged systems market following its \$12 million takeover of Global Software last month.

Magnuson was formed in 1977 to make and sell rivals to IBM's 4300 medium-sized mainframes. In 1981 there were takeover talks with Storage Technology and then National Advanced Systems, but they came to nothing.

Last March Magnuson filed for protection from its creditors under US bankruptcy rules. The previous year it made a loss of \$21.6 million on sales of only \$18.4 million.

Magnuson was allowed to continue trading last year while sorting itself out — and Storage Technology became a big customer. In nine months the company's new

hardware systems based on its own peripherals and Magnuson processors.

Meanwhile Ultimate was also selling distribution industry software on Digital Equipment Corporation's minicomputers. And its success in the IBM compatible processor market led it into the IBM software business — which brought the takeover of Global Software.

Global specialises in general accounting packages and competes with big firms like Management Science America and McCormack and Dodge.

Ultimate had sales of \$14 million in 1983 — including \$3.2 million worth of Magnuson processors and Storage Technology peripherals. This year it expects to more than double that to \$31 million, with \$8.6 million worth of hardware.

"We are getting substantial development funds," says George Pilmann, head of Ultimate. "And we're looking for more products. We want to expand all sides of our business into Europe."

## OUT NOW! 811 IDEAS FOR YOUR COMPUTER

In the Inmac catalogue of ideas for your computer check to see what is in the latest issue for you:

Cables, cables and more cables! How to order custom-built cables. When to use screened cables. How to choose the right EIA RS-232 extension cables for your VDU's and how to connect your Apple, Commodore, or other micros to Qume, Diablo, NEC printers. Compatible cables for connecting new peripherals to your DEC, Data General, Hewlett Packard, IBM, Osborne and Tandy computers.

Lifetime Floppies Read about Inmac Plus — the floppy with a lifetime guarantee! Choose from our range of 100% error-free disk cartridges, flag-free disk packs,

each with a 3-year replacement guarantee.

New Ideas! Dozens of exciting new products — many never seen in Europe before now — and lots of helpful hints on getting more from your computer department.

Service and Quality — a promise you can rely on! We promise a next day delivery service of our products, a 30-day risk-FREE trial, and a 12-month trouble-free quality replacement guarantee.

Send today for your FREE catalogue with no obligation to purchase — but be warned: you will want to buy once you have read the Inmac catalogue ideas book!

# Software house banks on a first

by Donald Kennett

US-BASIS banking software house Hogan Systems believes it has the first system that can give international banks a global picture of their operations. But UK-based software firms have dismissed Hogan's claims.

The company acquired the system in December by buying its designer, New York-based Henco Research. It launched it in the UK last week, because it regards London as the world centre of international banking.

Hogan's director of European operations, Rich Warren, says: "We think we're first. Banks have got to know how much they have got and what their exposure is at any given time. And we are the only company that can offer a global picture of their position."

The UK banking software market is currently dominated by Arab, Ilex and BIS. But Hogan believes its rivals' products are getting old and have the disadvantages of being based on smaller machines and of not having integrated foreign exchange, loans and accounting applications.

The three firms listed by Hogan scoff at these claims. "A lot of firms have come to the City roar-

ing like a lion and later gone out like a lamb," says John Wills, marketing manager at BIS Software. "We have 280 staff in London alone; Hogan has 20. Our Midas system has been around for some time, but it's constantly updated. We've announced three new modules in the last six months."

The UK-based firms use Digital Equipment Corporation computers and the IBM System 34, 36 and 38. They say they use this size of equipment because that is where demand is.

Hogan's IBMS runs on IBM mainframes from the 4300 upwards, under MVS and DOS/VSE, using the CICS teleprocessing monitor and IMS, DL/I or IDMS database management systems. It is designed to accept input online from bank branches and to provide online analysis of level of activity, exposure and profitability by customer, branch and product.

Its advantages are claimed to include control in a changing business environment and increased productivity by eliminating the need for manual consolidation of separately produced figures.

Warren says: "Institutions can't bring their own resources to bear on producing this kind of system

for themselves - they've got to buy it in. There seems to be a thirst for this kind of product in Europe."

Hogan Systems was formed in 1977 and set up its UK subsidiary last April. It was looking for a UK distributor when Warren persuaded its management to set up a subsidiary instead.

Warren was European sales and marketing manager for Cincom and he contacted Hogan while looking for systems that Cincom's Total database management system could be interfaced to.

Warren says: "Software companies basically sell a bag of wind for a lot of money, so the quality of their people is vital. We try to hire the best we can, and our staff turnover is low."

The company's revenue per employee climbed from \$90,000 in 1981 to \$146,600 last year, while the industry average remained constant at \$80,000, according to Warren.

Revenue for the nine months to December 31 was \$20 million, with net profits of \$2.4 million, compared with the equivalent period a year ago when revenues were \$12 million and profits \$2.6 million.

WARREN... "We think we're first."

## Olivetti wins part of £3m deal with South Africa

by Donald Kennett

OLIVETTI and UK software house Systems Designers have won a £3 million contract for the South African public viewdata system.

The other contenders on the shortlist were GEC, Sperry and a consortium from France. IBM was invited to tender but withdrew its bid, advising the Post Office to wait another year before going ahead. IBM has suffered major delays to its implementation of the West German Bundespost's Bildschirmtext system.

The contract covers software enhancements to the trial system until the full system comes into service in the summer of next year. The full service will run on a network of seven DEC Vax superminis in Pretoria, Johannesburg, Capetown and Durban.

It will have a main database with 5 million pages for information services and a further 200,000 pages for message services. Subsidiary nodes will have cache databases to hold information frequently accessed from the main database.

A spokesman for SDL says that the service will differ from British Telecom's Prestel by placing more emphasis on gateways to external computers and by making use of CEPT (Conference of European Postal and Telecommunications Administrations) display standards. This follows the example set by Bildschirmtext.

## Wordplex picks PC compatibles

by Keith Holder

WORD processor manufacturer Wordplex has turned to US micro maker Corona Data Systems for a range of IBM PC compatible machines for office automation.

A multi-million dollar OEM deal has been agreed for machines already seen under Corona's own label. Alan Adler, OEM sales manager for Corona, says that this is one of several such deals in progress.

Corona, says Adler, is looking to supply its machines to companies which have developed a strong presence in more specialised markets. "Wordplex is a quality company in office automation; we are very pleased to be doing business with them." This is the first time Wordplex will market a machine

not built at its own factories.

Wordplex is the second-largest supplier of word processors in the UK, with over 5,700 units installed. UK turnover was £19.4 million last year, an increase of 30% on 1983, and the company is hoping to push this to £25 million this year. The UK accounts for around 35% of sales.

Three machines are offered by Wordplex. The first is a standard PC model, with 128 Kbytes of RAM, expandable to 512 Kbytes, based on the Intel 8088 processor. It features full IBM PC compatibility, high resolution 12in screen and two 320K floppy disc drives.

Next comes the XT model, which internally is identical with the PC, but has a 10 Mbyte Winchester disc drive.

Lastly, there is a portable version. With a weight of over 20lb, however, its maker admits that this puts the machine more into the transportable class. It carries the same specification as the PC, but the screen is shrunk to 9in.

All the machines run MS-DOS and use Corona's version of Basic. A PC tutor package to help users familiarise themselves with the product is included in the price.

Optional extras include colour boards, Epson printers, word and mouse. Software packages offered include the Multiplan worksheet, Lotus 1-2-3 and the Friday electronic filing system.

Roger Winder, Wordplex's director of marketing, strongly denies that the introduction of these machines will damage sales of the

company's word processor range. "What most people don't realise," he says, "is that word processing packages designed to run on micros are only suitable for occasional use, and won't cope with the workload that, say, an office secretary would require."

He adds that the introduction of the micros is only the next step in the company's bid to become a supplier of complete systems for office automation.

The system approach will become more apparent when the company launches its System 8000 file/resources network connector next month which allows micros, word-processors and peripherals to be used either as a distributed system or connected to the Rascal Planet network.

## AGENT WANTED

To market and support MVS systems software products. Top Secret is the fastest-growing security product in the world. Single image Software is the market leader in multiple-cpu shops. If you are currently active in the IBM systems software market-place, tell us why you can sell and support our products in the UK.

FLUCK... "Teach concept."

## Micro diploma is in offing

by Philip Hunter

UK SCHOOLS and technical colleges could next year be offering nationally recognised diploma courses on practical microcomputer applications. The Royal Society of Arts, one of the leading national examining boards, is looking closely at a diploma course being taught this year at five schools and an adult technical college in Milton Keynes.

"They want to take it off us and validate it nationally," says a spokesman for the Milton Keynes Industry-Education Liaison Committee, which produced the idea for the course.

The course is a joint initiative

between schools and local industry in Milton Keynes, to provide instruction in microcomputer operation and use of business software, such as financial spreadsheets.

"Our aim is to teach the concept rather than specific skills," says Andrew Fluck, head of computing at Stantonbury Campus, a local school involved in the course. "The idea is not to give specific instruction in programming, but to teach general details of how to handle a silicon office."

The course includes 40 hours of direct teaching, and 40 hours' unsupervised use of micros, spread over a school year. There are eight sections, including viewdata, ac-

counts software packages, commercial applications, and there is a visit to see how local businesses use micros. The course ends with a practical business project, such as using a word processor to prepare a report.

Fluck says there are plans to extend the course to cover more advanced applications, such as integrated business packages.

At the same time the present course may become part of the foundation training for science students at universities. Schools in Croydon are also offering a diploma course aimed more at 12-13 year olds.

## BT policy has put UK ahead, says Butcher

by Nuala Moran

INDUSTRY Minister John Butcher claimed last week that the UK had stolen a march on other European PTIs because of the government's policy of liberalising British Telecom.

This would lead to London becoming the value added network services (Vans) centre for Western Europe, he said. So far 72 companies have been licensed in the UK for over 200 Vans.

"We have created the most liberal Vans regime in the world and privatisation later this year

will stimulate competition and innovation which will be the key to the growth of Vans experience," said Butcher. He added that this would lead to "London having the same presence in telecoms services as it does in financial services."

Butcher was speaking at the opening of Mohawk Data Sciences' (MDS) electronic mail centre in London. Called Winc (the Worldwide Integrated Communications Centre), it is tied into an international network.

The centre in London which

uses DEC hardware is linked to another Winc centre in Connecticut. Winc was available in the US for seven years and Richard Harcus, marketing manager for Winc, says that pressure from US subscribers wanting to link to European subsidiaries is one of the factors that influenced MDS setting Winc up here.

Winc is based on a central computer dialling subscribers at predetermined intervals 24 hours per day. An MDS Series 21 computer installed at the subscriber's office sends messages to the central com-

puter and accepts incoming data from the network. Foreground tasks, such as word processing, can continue during the time the terminal is connected to the host.

There are eight subscribers so far, including Ford, Memorex and Perkin-Elmer, and Harcus says he expects to sign up four more by April. According to Harcus, the Winc service is cheaper than phone or telex.

"Winc costs 50% less than telex going from the US to the UK and 10-15% from the UK to the US," he says.

## SALES BRIEF

### BT's buys from Ferranti reach £12m

BRITISH Telecom has now spent over £12 million on Ferranti terminals since its split from the Post Office in October 1981. The latest £500,000 order for 300 FT7 programmable terminals brings BT's stock of Ferranti VDU's to over 6,000, as well as 700 FT7 cluster controllers.

The FT7 can be linked to BT's existing ICL and IBM mainframes, providing dual emulation from one terminal.

### Refuse collection

LAMSAC's refuse collection system, Ross, has now found its way into Australia. After winning several orders in the US, Lamsac, the Local Authorities Management Services and Computer Committee, has signed a contract with the Local Government and Shires Associations of New South Wales, which will market the Ross product, designed to improve efficiency of rubbish collection.

### NCC gains rights

ICL HAS granted the National Computing Centre exclusive rights to market its audio-visual training package for the VME operating system. This means that UK ICL users will be able to rent the package under the NCC's rental scheme, and overseas customers will have access to it from the NCC International Division.

### Ireland contract

HONEYWELL has taken the £2.5 million contract for the second phase of Ireland's local government computerisation. The contract was awarded despite the fact that Honeywell has no manufacturing base in Ireland, although some rival companies do.

### Champs in China

THE Champs hotel management systems, marketed by IBM's Software Sciences, has been installed in two hotels in China, including the 2,150-room Lido Hotel at Peking airport. Champs handles hotel administration, including restaurant point of sale, guest billing, bookings and telephone monitoring.

### Far East deal

SHORTLANDS Computing Services of London has signed a £500,000 export contract with CSA, a software house based in Singapore, to market and distribute business software in the Far East. Involved are multi-currency packages for Unix-based micros, embracing general ledger, purchase ledger, cash book and cost ledger.

### Gould's first

GOULD SEL has taken its first order for its new mid-range 32/67 super-mini, from Birmingham University's electronic and electrical engineering department. The machine, for use in post-graduate research and undergraduate teaching, will be implemented with the unit operating system. A typical 32/67 configuration costs about £100,000.

### Dairy automation

APV INTERNATIONAL, Sussex-based maker of automated manufacturing equipment, has taken a £1 million order to automate a dairy in Reykjavik, capital of Iceland. APV International is part of the APV Group, based in Crawley in Sussex, which turned over £400 million last year.

### Electricity control

THE Midlands Electricity Board on Tuesday switched on a £2.3 million telecontrol system supplied by Ferranti. The system will provide remote control of substations and automatic reduction of voltage according to predefined rota or surge in demand.

# NCR prepares to attack the office

by Paul Walton

NCR is set to launch a new mid-range machine to take on the competition from industry giants in the office automation market.

The company is buying in systems software and some hardware to add to its own efforts to sell what it calls "departmental architecture" - integrated systems based on a common bus with Ethernet connections.

The company's new range of machines, the V-series, is to replace its current 8500/8600 mainframes and is aimed to compete directly with the IBM 4331/4341. It is to be launched in May and scheduled for installation by the end of the year.

Nicknamed "Instant Ready", the range uses NCR's proprietary 32-bit chip set which was first used in the 9300 super mini and a distributed version of the company's VRX (Virtual Resource Executive) operating system for the first time.

It will offer continuous service of the Tandem Non-Stop style through a capability of linking the hardware components and using redundant processing capacity on the 32-bit chips. Users will have the option of buying a conventional processor first and adding the continuous processing as an optional extra.

Henry Thornhill, NCR UK's man in charge of the V series, says that it will "move away from being tightly-coupled, or having the operating system in one central processor, to be a loosely-coupled multi-processor".

Instant Ready's departmental machines because they sit on a common bus, or network, onto which all other NCR products are linked through the SCSI (or Small Computer Systems Interface).

The VRX operating regime will begin to overlap and interwork with the IRIX (or Interactive RX) mini systems. Around the office,

NCR will support links via Ethernet.

The heart of NCR's range will be predominantly based on the Unix System V operating system: both the 9300 Vax-like and the Tower office processor will interwork through Unix.

The NCR Decision Mate V micro, currently an 8/16-bit (CP/M-86 and MS-DOS) double, will soon get true 32-bit working and Unix making it a triple operating system workstation, according to NCR.

In the UK, the company has set up a product marketing group to smooth over systems integration and marketing. Graham Miller, director of the group, says that NCR "is now committed to becoming the supplier of office automation by the mid-1980s", and adds that this would be achieved by swinging the focus away from individual products and "concentrating on the complete system

MILLER... "Committed to becoming the supplier of office automation by the mid-1980s."

## What do you think about structuring?

by George Black

THE controversy over use of structured methods within data processing departments has prompted *Computer Weekly* to initiate a survey on their use.

Last November, a scheme put forward by the National Computing Centre (NCC) to bring structured methods into its systems analysis courses met with considerable criticism.

The examinations board of The British Computer Society, which is under NCC supervision, says the new approach must be followed from December of this year.

The board, however, has been accused of forcing the pace, and of running the risk of deterring students from entering examinations.

Some 13,000 people have passed the examinations since

the late sixties, and basic systems certificates continue to be awarded at the rate of about 1,000 per year.

Datusolve Education, whose general manager, Don Yeates, is chairman of the BCS Systems Analysis Examination Board, has agreed to do most of the research on the proposed survey.

*Computer Weekly* readers are asked to complete the form below and return it to CW Structured Survey, Room 1218, Quadrant House, The Quadrant, Sutton, Surrey, SM2 7AS. A representative selection of installations which respond to the survey will be asked if they can be visited so as to obtain more qualitative information. A report on the survey's conclusions will be printed in *Computer Weekly*.

Name .....

Address .....

Tel. No. ....

1. Do you use structured methods for analysis and design? Yes ☐ No ☐

2. If yes, which methodology? .....

Do you use structured programming techniques, and if so, which? .....

Why did you change to structured methods? .....

What benefits did you expect to get? .....

Have the expected benefits materialised? .....

What specific structured systems tool do you use? (eg dataflow diagrams, structured walkthroughs, data dictionary, structured English, decision tables, data structure diagrams, others.) .....

3. If no, did you decide not to change because of specific problems, and if so, which problems? .....

Do you plan to take steps towards structured methods? .....

Within the next six months? ☐ 6-12 months? ☐ 12-24 months? ☐

# dBEST.

dBASE II® is, quite simply, the best-selling database management system made for any computer, ever.

And because it is so powerful yet so easy to use, it has become the standard for managing data with a micro-computer.

Over 150,000 users.

So far. Doctors and lawyers, accountants and salespeople, stockbrokers and students, big businesses and small are all managing their data better with dBASE II. All over the country, around the world, users have found that dBASE II is the best solution to all their information needs.

Knowledge is power. With dBASE II, you can quickly and easily create a full business information system that does exactly what you need done. A system that will handle today's problems yet grow with you.

All of your data is at your fingertips with dBASE II. Using simple English-like commands, you add, delete, edit, display, print and manipulate your information.

Once you've decided on what you want done, you save the instructions so that even your least experienced personnel can perform the most complex business functions with two words: Do Invoices, Do Payroll, Do anything that needs to be done.

A legend in its own time. Already, books have been written about it. Hundreds of independent businesses are based on it. And other microcomputer programs measure themselves against dBASE II.

To see why, visit your nearest computer dealer and ask for a demonstration. Then take a package home and use it for 30 days. If it's not everything we said it was, return it and get your money back.

But we think you'll keep it. Can over 150,000 users be wrong? For the name of your nearest dBASE II dealer, contact: Ashton-Tate (UK) Limited, Cofferidge Close, Stony Stratford MK11 1BY. Telephone: 0908 568866

FRANK SL... "Expected 2,500 registrations turned into 30,000."

## MPs slam Data Bill again

by George Black

THE Data Protection Bill returned to the Commons last Monday and passed its second reading amidst a mounting wave of criticism of its potential effectiveness.

Critics of all political colours have told the government that its plans will not work, despite the amendments made by the Lords. The main point that they make is that the number of registrations will be too large for the resources of the registrar to handle.

Home Secretary Leon Brittan made an effort to conciliate the Bill's critics by telling the House: "There may well be further improvements still to come." But this had little effect on those who believe that the scope of the Bill is too wide.

At a recent briefing of a British parliamentary committee, the Swedish data protection commissioner, Jan Voss, said they had expected 2,500 registrations and now had 30,000 to be handled by

30 staff. The UK registrar is expected to appoint 20 staff. But in 1982, the Home Office listed 180,000 British businesses with a turnover of at least £250,000.

This week, Ted Cluff, secretary general of the Institute of Data Processing Managers, said that many other smaller businesses would also be involved because amendments to exempt common files such as accounting would allow very few firms to escape registration.

One MP estimated that Britain would need seven commissioners and 300 staff to be able to cope.

Cluff commented: "The Bill won't work. It'll be a terrible waste of our members' time and money but it will probably be enough for the government to be able to ratify the Council of Europe convention."

The National Council for Civil Liberties (NCCIL) doubts whether it would even achieve that aim.

General secretary Larry Gostin says: "The British Bill is the wea-

kest in Europe and may well not comply, because of the Home Secretary's sweeping powers and the exemptions for police and national security. These do not exist in any of the other European countries which have laws on the subject."

The Consumers' Association has come out in support of the NCCIL's campaign for clerical records to be covered by the legislation. It recently carried out a survey on privacy.

"People want and expect personal information to be kept confidential, but they trust few organisations to do this," says director Peter Goldman. "Even those they trust most - doctors and hospitals - do under certain circumstances disclose private information."

Finance and credit card companies are particularly distrustful on confidentiality, according to the survey. Nearly half those questioned did not believe their employers always kept information confidential.

## Tebbit's DoTI plan aims to win exports

by George Black

SECRETARY OF State Norman Tebbit has shaken up the Department of Trade and Industry to make it push exports and to strengthen the telecoms and information technology divisions.

In so doing, he may have made it impossible for a future Labour government to split trade from industry as the Wilson government did in the mid-70s on taking over from the Heath government.

The merger of trade and industry was begun by Cecil Parkinson shortly after the general election last summer and has now been completed by his successor.

In an introduction to a new leaflet explaining the changes, called *Aims*, Tebbit writes: "The distinction between service and manufacturing industries in home and export markets matter little to the creators of wealth, and the new organisation ensures that industrial and commercial policies are designed in harmony from their inception, rather than co-ordinated after leaving their separate stables."

Industry divisions such as telecommunications and information technology will gain control over their own export and regulatory affairs, which were formerly handled by the trade side.

Official sources said that Tebbit intended to give more backing to

efforts to diffuse new technology both into British manufacturing and engineering industry and into the government itself.

Observers on the Labour side, however, view the announcement as more of a muscle-flexing gesture by Tebbit in warming up for a struggle with Chancellor Nigel Lawson.

They point to Tebbit's assertions that his is "the other main economic department beside the Treasury" and "the only department beside the Treasury to have two permanent secretaries".

Tebbit's keenness to underpin worthwhile computer ventures is bound to come under critical scrutiny from Treasury officials trying to keep expenditure down and achieve tax cuts.

But at the same time, official sources emphasise that the re-organisation is one of method, not of policy. Tebbit sticks closely to the approach of his predecessor, Cecil Parkinson, in his commitment to fighting protectionism.

Labour's campaign document for the last general election pledged the party to set up a new Department for Economic and Industrial Planning, to end the conflict between the DoTI and the Treasury. But last week, a party spokesman could not say if this was likely to be the policy when the next election came round.

## NEC plans second UK factory

A DECISION is pending in Tokyo on plans which the Nippon Electric Company (NEC) has to set up a second factory in the UK. The factory will make telecommunications equipment. NEC already has a chip factory in Livingston, Scotland, which started production in October 1982. At the moment, 200 people work there and this number is planned to go up by 600 by the end of 1985.

## Davidson moves

BURROUGHS' general marketing manager, Iain Davidson, has left the company to take over as Data General's UK sales manager. Davidson replaces John Filmer, who was recently appointed to head Data General's Australian operation.

## PPL personnel

UK APPLICATIONS software supplier Package Programs Limited (PPL), which had a turnover of £5 million last year, has entered the computer personnel recruitment field. Chairman Roy Taylor says that the new division will cover the whole industry and expects it to account for about 2-3% of his turnover next year.

## Windsor start-up

US LOCAL network company Ungermann-Bass has set up its own UK operation. The Windsor-based subsidiary is headed by Ron Davis, formerly network product manager at Ungermann-Bass's UK distributor Thame Systems. Davis says that the growth of UK business means direct support is needed.

## March for books

MARCH will be Computer Book month, and 150 nationwide book-sellers will stage window displays of computer books and software. John Wiley and Sons will sponsor the event, and will exhibit its own publications as well as others it distributes, including books from the National Computing Centre, Sigma Technical Press, and software from Acornsoft.

## Times 10

LAST week's Micro News story about Apple and its Macintosh said that the planned production for the new micro would be 4,000 units per month by the end of this year. That should have been 40,000 Macintoshes a month - a rate of around half a million per year.

## Keele researches

THREE ICL Perq workstations running on the Unix United operating system will go to Keele University's Computer Science department for a three-year £195,000 government-funded project to try to boost the reliability and functionality of data management in distributed computer systems.

## Net earnings up

MOTOROLA has reported net earnings up 37% in 1983, at \$244 million, on sales up 27% at \$1.27 billion. Earnings rose from \$63 million to \$95 million in the fourth quarter.

## Profits up 80%

NORTHERN Telecom, now North America's second largest telecommunications manufacturer, has reported operating profits up 80% at C\$227 million on revenues up 10% at C\$3.3 billion. Fourth quarter net was up 50% at C\$67.0 million on revenues ahead 25% at C\$974 million. The company, which is controlled by Bell Canada Enterprises, saw its 1983 Canadian revenues dip 14% but it is making inroads into the US markets.

SCHRYVER... "Choice of processor is irrelevant."

## Lynwood aims to trap IBM users

by Philip Hunter

IBM users in the UK now have an independent British source for intelligent terminals.

Lynwood, which claims to be the leading privately-owned UK maker of intelligent terminals, last week launched Traps, a transaction processing package which enables its Alpha terminals to take over forms handling and validation tasks from the host mainframe.

The company has also launched an IBM 3274 emulation package for its Alpha terminal range, offering the standard IBM features plus high resolution graphics.

Lynwood makes two terminals, the eight-bit Beta, based on the

Z80A, with 8K memory and costing around £1,000, and the 16-bit Z8000-based Alpha with 192K internal memory for between £1,400 and £2,000.

The colour version of the Alpha costs £1,000 more. Technical director Andrew Schryver says that the actual choice of processor for the terminal is arbitrary. "The choice of processor is irrelevant, as IBM has shown," he says.

Managing director Hector Brown claims that Lynwood was one of the first companies in the world to use a 16-bit processor in a terminal in 1975. Last year, the company turned over £5.3 million, and Brown says it is heading for

£9.5 million for year ending June 30, 1984.

The company manufacturers at Alton in Hampshire, and has offices in London and Harrogate, plus subsidiaries in Holland and Switzerland.

Total staff is 200, but Brown says this should increase in 1984 with new offices planned in the Midlands and Scotland.

In the UK, the company handles its own marketing and support, but sells through distributors abroad.

The company recently bought Dyadic, a small UK specialist in software written in the APL language.

## Benefits cuts will hit ICL package

by John Kavanagh

ICL's troubled local authority package which handles social security benefits has hit new problems because of government plans to cut benefits by £230 million.

ICL and the 40 users of its housing benefits system say they cannot make the changes in time for the start of the new financial year on April 1.

But other suppliers and their users are confident that the deadline can be met, even though social security minister Dr Rhodes Boyson has not yet announced all the details of the changes.

The housing benefits rules took effect last April. By the summer, local authorities - traditionally ICL's staunchest allies - were saying its failure to deliver a working system had cost them extra work and long delays in getting out rates and rents demands and rebates.

This week, Guildford city data processing manager Tim Russell said: "We're very concerned about the proposed changes. After our experience of the last year it doesn't look as if ICL will do it in time."

"We're considering moving to a hybrid system which would be mainly manual - and the computer part wouldn't be ICL. We are talking to other suppliers."

Brian Thompson, treasurer at Wychavon District, says ICL had not provided programs to run year-end routines yet. "They can't be working on those routines and on the changes," he says.

Thompson adds: "We will have to carry on providing benefits under the old rules and then recover the payments later. This could mean asking money back from pensioners."

But Thompson also blames civil servants. "I don't think people in

Whitehall appreciate the impact of what they're doing," he says. "These changes will be introduced at the year end, our busiest time."

But other companies' users are more optimistic. At Babergh District, which uses a system from F International, assistant treasurer Mike Cheese says there will be "no problem".

"It's a nuisance, but it will be done on time because most of the changes will be handled by simply amending parameters," he says.

NCR local authority manager Phil Gieghorn says: "If the changes are as we expect, there should be no problem."

Geoff Rees, managing director of Business Micro Systems, says: "There's no question, it's a problem. If they settled on the details today we could just about produce a code which would be tested by use but not by users."

## MSC starts adult IT scheme

by Nuala Moran

A SCHEME to provide adults with information technology training is being launched by the Manpower Services Commission at nine of its regional Skillcentres. The first of these courses will take place either at Plymouth, Birmingham or Letchworth later this month.

An MSC spokesman says: "The idea is to set up something rather like an ITEC for adults. The training will definitely be practical, including computer technology, CAD/CAM and so on."

ITECs (Information Technology Education Centres) are designed to give practical experience to school leavers with 'O' and 'A' levels.

The kind of skills taught are usually related to local industries. The idea is to create a commercial environment, and ITECs are registered companies.

country so that they can "meet the challenges of the new technical age", are being looked at by the government. The plans have already been approved by the MSC itself.

Reorganisation began last year when the 87 Skillcentres were placed under the Skillcentre Training Agency.

The Agency was told to make the centres self-supporting by going out into the market and selling their services on a trading account basis. According to the MSC's plans, this should mean full cost recovery from 1986/87 onwards.

Most of the Skillcentre's business is in the Training Opportunities Programme (Tops). Last year, plans were announced to change the computer training offered by Tops following complaints by the industry that the courses were not producing people it could use.

# Microdata 1000

All systems go in a desk top workstation

The new M1000 workstation is a sophisticated desk top system for comprehensive business facilities and graphics. Communications protocols allow integration into any other Microdata network - and IBM.

The big plus which comes with the M1000 workstation - and with no other - is the proven easy-to-use Pick-based Really operating system. This creates the Microdata Relational Environment enabling the executive to have, at his fingertips, relevant management information from the total company database.

A 'Natural Language' facility enables the end user to use the system lucidly whilst Microdata's 'ALL' fourth generation Application Language Liberator gives the d.p. professional a powerful tool for software development.

Our One Thousand Hot Line will tell you more. Call Hemel Hempstead (0442) 61266 and find out why the Microdata approach to desk top computing produces all the right answers. Don't settle for less.

Microdata Information Systems Limited  
Maylands House, Maylands Avenue,  
Hemel Hempstead, Herts. HP2 4PL  
Tel. (0442) 61266. Telex: 825068.  
Microdata is a McDonnell Douglas company.

# Burroughs begins its big A9 drive

by Dave Madden  
BURROUGHS has launched the first in a new family of mainframes which will succeed its current generation from the B1900 up to the large-scale B7900 models.

The first in the new line, the A9, replaces the B6900 system. The company is currently developing the rest of the series.

Burroughs is anxious to show that the A9 system remains object code compatible with the company's other mainframes - from the 5900 to the 7900.

Like the 7900, the system consists of a central processor unit (CPU) surrounded by functional subsystems - handling memory, input/output, data communications, for example. But Burroughs claims that its implementation of its own architecture within the CPU is a radical departure.

The main component of the CPU is a multiple logical processor. With this device each set of

hardware instructions is considered a micro-program or "task", and the A9 multiprocesses these "tasks".

By offering three logical processors within a single A9 complex, the system does not have to work on the object code in the exact order in which the compiler emits it. In effect, Burroughs introduces an element of parallelism to increase performance.

Mario Fennell, manager of the A series, explains: "We have two choices in improving throughput - we can increase the clock rate, or as in the A9, we can develop an intelligent processor."

Rather than handle operators sequentially, the A9 Multiple Logical Processor will look at a series of instructions and process them concurrently where they are not inter-dependent. Fennell says: "This is a fundamental enhancement and it is not technology-dependent."

The other obvious development from the B6900 is that the A9 is built around a 100K emitter - coupled logic circuit technology - from Fairchild - which brings an improvement in power consumption and reliability.

There are three models in the range. An entry level A9B comes with a CPU and six Mbytes of main memory. Memory is expandable to 24 Mbytes in the A9F, which also has a cache memory system.

Burroughs says that its architecture makes a major rating irrelevant, but the input-output subsystem can outpace a peak six Mbyte per second data transfer rate of 4.5 Mbytes per second over time. The A9F is 100% more powerful than the current B6900.

All the machines run the Burroughs master control program system software and the company says that existing B5000/B6000 program libraries can be used

FENNELL... "Multiple logical processor is a fundamental enhancement."

without modification.

It is releasing a new query system, ERGO - extended retrieval with graphic output.

UK prices are yet to be settled, but it looks as if the A9B will cost

£260,000, the A9D £360,000, and the top-end A9F £460,000. The A9F will be the first machine available in the UK, with shipment due in the third quarter of 1984.

Burroughs has decided to

produce the A9F first as the direct replacement for the B6900, which is now dropped.

The A9B and A9D are seen as natural upgrades for Burroughs 1800/1900 and B5900 users.

## Field service cash will slump, predicts report

by Keith Holder

FIELD service revenue in Europe will be on the decline by 1985, according to Input's annual review of the maintenance market\*, published last week. It is the first time that a drop in this market has been forecast since the company began its surveys.

Users will spend less, and rely more on independent service companies. That will cause the market to experience a "correction" based on price, technological and economic factors, says the report.

More reliable machinery and fault-free or fault-tolerant equipment will also make it easier to survive on less service support, the report says.

All is not gloomy for the maintenance industry, however: the downward trend will be short-

lived, and completely reversed by 1987. Engineers will remain in demand to cover new territories, products and services, the report concludes.

The report also highlights user dissatisfaction with maintenance in Europe. Response times, lack of capabilities, software service, cost and the time taken for repairs to arrive are the chief criticisms.

The story is similar for service, with low quality and delays two of the main complaints.

What users want most, says the report, is more spare parts, better training, faster response times and better diagnosis. Only 1% of people questioned wanted more frequent visits.

\*European field services programme 1983 annual report, Input, 35 Piccadilly, London W1V 9PB. Tel: 01-439 8985.

## Thorn buys again

by Donald Kennett

THORN-EMI's latest expansion into videodata services has been to acquire the videodata interests of Mills & Allen, the poster advertising, money broking and insurance group.

Mills & Allen was one of the earliest information providers on Prestel, and its operations included managing databases for a number of other companies.

These activities have been merged into Thorn-EMI's Datasolve division, which was itself an earlier acquisition and which has already been an "umbrella information provider" - managing databases on Prestel on behalf of other companies - for some time.

Mills & Allen's information provider operation joins two other similar services bought in last year from the Financial Times in December (Prestel) and from Link House Publications in May.

As part of the same deal, the company's interests in computer-based training have moved into Datasolve Education, the division that runs conventional training services and which has been involved in the Manpower Services Commission's Youth Opportunities Training scheme.

The core of this part of the deal is Mills & Allen's training software-writing program, Combat, which runs under the UCSD P-System on a number of microcomputers including the IBM-PC and the Sirius.

The videodata activities come under Datasolve Retail, whose general manager, Richard Dove, says: "We consider it strategic. We hope to follow these acquisitions with subsequent acquisitions. We want it first as a business in itself, to make money, and secondly to move past that into interactive services to back up that business."

Dove sees his initial markets as the travel industry, home banking, teleshopping and insurance. "But it's early days for videodata activity," he says.

His company already runs an automated book ordering system called Teledirect, which is based on 150 Texas Instruments microcomputer terminals in bookshops pooled by Datasolve's mainframes. The service is four years old and it already handles 25% of all book trade orders. These include all W. H. Smith's book orders, although W. H. Smith collects them all itself and passes them to Datasolve over a single-link. Datasolve passes them on to more than 2,000 publishers.

"In February last year, we introduced a Prestel Gateway to the system to aim at the cheaper end of the market," says Dove. "It's my belief that this is the route for major expansion."

The retail division is looking at systems for polling point-of-sale terminals and is running trials of a service using hand-held data collection terminals, from which sales reps send in orders via an acoustic coupler each night.

# Philips has doubts about Bull liaison

by Jack Gee

AH alliance planned between Bull's state-owned Bull and Philips Data Systems to market Smart memory cards with identical technological specifications appears to have run into a last-minute hitch following doubts by the Dutch multinational about the advantages of the venture.

"There are benefits in having a common system," Herve Nora, head of Bull's memory card division said last week. "Together we can open up the market. If we join forces on using the same chip, we make ourselves more credible."

Bull, which has put the card's memory and microprocessor on a single chip (Motorola 6805 with 2 K of ROM, one K of EPROM and 40 bytes of RAM) is backed by the French Telecommunications Authority in its efforts to persuade Philips to follow suit.

At present, Philips is using two chips, one a standard Intel 8048 microprocessor, the other an EPROM.

"We agree there are advantages in using the same component," says Andre-Jacques Selezoff, advanced projects manager at Philips Data Systems' Paris headquarters. "But that's not the entire story."

Selezoff added: "Bull's interest in getting agreement on a joint system is clear as this would increase the sales of a firm which lacks the worldwide marketing power of Philips. So Philips' interest in common component supply is certainly not as strong as Bull's."

He added: "Philips, which got its card to the testing stage both in France and the US well before Bull, is geared to attack a much broader sales area than our French colleagues."

Selezoff pointed out that Philips has sold 100,000 banking terminals all over the world and

can rely on finding clients for the Smart card among the long list of banks already using the terminals.

"Our computer products are being made to 20 of the 70 countries which make Philips goods. This score of countries are obvious targets for our memory card."

Alain Turbat, manager of the French Telecommunications Authority's memory card project group, said: "We are strongly in favour of having a single chip on both the Bull and Philips cards. The single chip offers better security - the memory is controlled by the microprocessor and cannot be broken into. It is also cheaper and easier to embody in the card."

French Telecom is a partner with France's leading banks in trials of the Bull and Philips Smart cards at shops, banks and to pay telephones in Blois, Caco and Lyon.

Backing introduction of a single chip card, Roy Bright, head of telematique, the marketing arm of the French Telecom, said: "This is the way to make France's Smart cards really convincing on the export front and to win orders before the US and Japanese competitors move in."

France's Ministry of Posts and Telecommunications plans to issue 1.5 million multi-service Smart cards this year.

They will be used for public pay telephones, payment of videotex services - telebanking and telepayment for products ordered electronically by videotex - as well as for France's fourth television channel (PAY TV) and as a payment mechanism for delegations at conferences and exhibitions.

The card will also be used by customers of France's postal cheque clearing bank which currently operates 7.6 million accounts.

## Unknown Scan grows

by Nuala Moran

AN optical character recognition (OCR) system which will read documents for data input at 2,000 characters per second will be launched in the UK by Scan Optics in March.

At this rate of input it is claimed the system can do in five seconds what it takes a data entry clerk at a terminal an hour to do. Such systems typically cost about £500,000.

Although Scan Optics has been around in the US since 1968, it is relatively unknown in the UK because until now it has sold through ICL. The company is going into direct selling under its own name. It has spent £250,000 setting up a sales and service organisation, going from four staff to 14, with more to follow.

At the same time it picked up two big contracts - with Barclaycard worth \$3 million, and with the Driver and Vehicle Licensing Centre (DVLC), said to be worth £1 million.

UK general manager John Woods thinks that these two showpiece contracts plus the investment in service and support will give Scan Optics the credibility it needs to go after blue chip companies and government contracts.

"Our typical customer is a large

sophisticated organisation which knows it has a problem," says US vice-president Clarence Rife. "Data entry has always been a bottleneck. What we have to offer is a cost justified solution - a straightforward increase in productivity."

"Our success in the US has allowed us to branch out in the UK and we have the knowledge and experience to know where our products fit best," he adds. Scan Optics Inc is based in East Hartford, Connecticut.

Woods expects the UK company, which is a wholly-owned subsidiary of the US company, to have a turnover of at least £2 million in 1984. "The market in the UK is worth at least £50 million," he adds.

Scan Optics is also poised for the image processing market. Rife says: "We have the capability, and the techniques for storing massive amounts of data are not quite there. But I think they will be in three to five years. Then the industry will explode, there are so many potential applications."

Image processing involves storing complete pages of data, for example drawings, exactly as they appear. The technique could be used for storing fingerprints or signatures.

WARD... "It's basically a one-stop shop for computing needs."

# High Street micro competition heats up

by Philip Hunter

COMPETITION is increasing fast for High Street sales of business microcomputers, with two big UK suppliers, Applied Computer Techniques (ACT) and Intelligence UK, planning national networks of shops.

ACT, like the huge US Computerland group, is franchising the stores under the condition that no directly competitive products are stocked, and that 80% of the products are from ACT. The stores will sell both the Sirius and

Apricot computers, and offer end-user support.

The plan eventually is to open 200 stores throughout the UK, with 20 in London, under the banner ACT Computerworld.

Intelligence is taking a different approach by aiming at vertical markets, with no plan to franchise the operation.

"The idea is that we man the retail outlets with the same sort of people as our systems house," says Intelligence managing director Ashley Ward.

The company last week opened

its first store in the City of London, aiming to take £1.2 million worth of business in the first year from the City's financial community.

The shop will stock the five makes of personal computer currently being distributed by Intelligence: the ACT Apricot and Sirius, the IBM-PC, and Wang and Seiko computers.

"It is basically a one-stop shop for computing needs," says Ward. Included in the support package will be training for end-users, ranging from basic word processing

to use of the powerful financial spreadsheet package Micromodeller, which the company supplies.

Ward says other stores will open elsewhere in the country to address different vertical markets such as manufacturing and engineering. He sees ACT Computerworld as a serious competitor, but dismisses Computerland, and other franchise groups.

"Computerland is not geared up to handling the more sophisticated prospects," he says.

## Data General recruits five top professors

by John Kavanagh

FIVE top US university professors are to advise mini-computer firm Data General on the long-term use of new technologies.

Data General president Ed de Castro said their experience would be "a resource of very significant potential value".

The five are: Dr Michael Derouzos, professor of computer science and electrical engineering and director of the computer science laboratory at Massachusetts Institute of Technology; Dr

James Meindl, professor of electrical engineering and director of the integrated systems centre at Stanford University; Dr David Patterson, associate professor of electrical engineering and computer sciences at the University of California; Dr Raj Reddy, professor of computer science and director of the robotics institute at Carnegie-Mellon University; and Dr Patrick Winston, professor of computer science and director of the artificial intelligence laboratory at Massachusetts Institute of Technology.

DE CASTRO... "Value."

## Burroughs closes down factory

by Nuala Moran

BURROUGHS is to close its cash dispenser factory in Croydon, Surrey, with the loss of 259 jobs. Property, with the loss of 259 jobs. The closure is part of a worldwide programme of rationalisation of its manufacturing capacity.

The move to Burroughs' factory at Plymouth, Michigan, would not involve any expansion there, said a spokesman.

The Croydon factory, opened in 1970, was purpose-built for Burroughs. The spokesman says there are no plans to use it for any other purpose. "The closure is wholly because of over-capacity and rationalisation."

Plans to double the size of the Livingston factory to 200,000 square feet were announced last year.

# USA

## DATA COM '84

The exhibition will feature:

- 34 leading U.S. firms.
- Modems, multiplexers, converters.
- Computer interfaces and peripherals.
- Network processors and management systems.
- Disk drives, graphics and V.D.U.s.
- A MUST for all professionals in the computer equipment/maintenance and service fields.

at THE AMERICAN EMBASSY, Grosvenor Square, London W.1  
For tickets contact: GREGORY D. STOLOFF on 01-829 4304

## Bleasdale Computer Systems Ltd

Francis House Francis Street London SW1P 1DE  
Telephone 01-828 6661 Telex 28905 ref 1044

Well - here's why.

Bleasdale Computer Systems is the leading European UNIX system company - which provides a level of support that importers of American computers cannot match.

- Bleasdale was the first European company to design, manufacture and deliver UNIX computers and has been installing these systems for over two years.
- Bleasdale has continued the development of its range of computers to ensure that they stay technically advanced.
- Bleasdale's development team of system engineers has tuned the UNIX software to provide optimum performance with the hardware. Independent benchmarks show that the Bleasdale 68000 UNIX computers comfortably outperform all other UNIX superminis - bar none.
- Bleasdale has in-depth UNIX systems expertise and provides a design service which enables systems to be configured to meet users' specific needs.

- Bleasdale has been working with the leading UK and European systems companies for the last two years developing a wide range of applications to run under UNIX on the Bleasdale computer.
- Bleasdale provides a support service, during normal office hours, where users who have queries on UNIX can get immediate answers to their questions. This service also includes being able to run diagnostic tests remotely via modem.
- Bleasdale provides a 24 hour maintenance service staffed by engineers who specialise exclusively in Bleasdale UNIX systems.
- Bleasdale runs a comprehensive and highly practical training programme regularly in London, or at customers' premises.

So - if you're thinking of buying UNIX computers - why don't you talk to Bleasdale - "The UNIX Systems Company".

"UNIX is a trade mark of Bell Laboratories"

10/11/84 13:30

## SOFTWARE FILE

## Logica puts Rapport on the Perq

LOGICA'S Rapport relational database is to be marketed on ICL's Perq workstation through the ICL Tradepoint distribution scheme. It will be run under the PNX Unix-based operating system with the window facilities. Rapport is also to be delivered to the US firm Perq Systems Corporation (formerly Three Rivers) in which ICL holds shares.

## Bureau launch

BUREAU ADP Network Services has launched a project management system called APECS/8000 to run on a range of machines from micro to mainframe and under the Unix operating system. The system uses critical path techniques to help managers plan and control project schedules, resources and costs.

## Into business

THE BBC Micro is edging into the business world with the addition of an API package from Inner Product of London. It is to be called Acumsoft API and will be available in two months under the CPM business system.

## PC collaboration

ASTON Technology of Birmingham and Interactive Data Machines of Doncaster are to collaborate to make the application generator System Builder available on the IBM-PC under the Pick operating system. Aston has the rights to the generator, while IBM has the rights to Pick on the PC.

## Unix conversion

ORACLE Corporation of California has converted its relational database to run under Unix System V. Oracle is to sell the product itself in the UK and Ireland after ending its two-year distribution agreement with software house CACI. President Larry Ellison claims the product to be 98% operating system-independent.

## Productivity tool

TANGENT Computer Services of Essex is to sell the Canadian software productivity tool for IBM mainframes called tableBASE. An agreement has been announced between Tangent and Data Kinetics for the tool.

Software File is compiled by George Black

## Overload solution arrives in the UK

A NEW solution to the problem of mainframe overload is about to come on the market in this country.

It is a hybrid - both nationally and technically. Devised in California by the partnership of American David Britton and expatriate Englishman Geoff Lee, it is to be imported by Thorn-EMI's subsidiary Software Sciences.

The trick they claim to have figured out is how to relieve the large machine with a back-end processor running a relational database.

According to Britton, mainframes which evolved on the standard Van Neumann architecture were never well-suited to commercial data processing, having been created for scientific work. The result was that in putting sophisticated database software on to them, the system would seize up with as few as four users.

The problem is common, he claims, when running IBM's SQL package on a 4300 and will not be much alleviated when it offers DB-2 running under MVS on a more powerful machine.

Similar troubles occur with most other makes of hardware. In 1979 he and Lee, who were systems builders for BASF, tried to interconnect BASF in backing the idea of a hardware-independent database machine. But they say BASF did not know what they meant. So they raised £11.5 million capital for their own firm to do the development - most of it from the UK, including a contribution from the British Technology Group.

They appointed as project leader Robert Epstein of Berkeley University, with which they still have close ties. They admit that the scheme turned out more difficult than anticipated; it has been very delayed in coming to market. But they now claim over 100 US users.

Several delegates said that though there was no alternative to backing Unix at present, the directors should broaden the scope of the programme to give the UK greater independence in the future.

After the private meeting, Alvey software director David Talbot's only comment was: "Well, at least I didn't get any bricks thrown at me."

Mark Dowson, of Imperial Software Technology, one of the critics

claims, when running IBM's SQL package on a 4300 and will not be much alleviated when it offers DB-2 running under MVS on a more powerful machine.

Similar troubles occur with most other makes of hardware. In 1979 he and Lee, who were systems builders for BASF, tried to interconnect BASF in backing the idea of a hardware-independent database machine. But they say BASF did not know what they meant. So they raised £11.5 million capital for their own firm to do the development - most of it from the UK, including a contribution from the British Technology Group.

They appointed as project leader Robert Epstein of Berkeley University, with which they still have close ties. They admit that the scheme turned out more difficult than anticipated; it has been very delayed in coming to market. But they now claim over 100 US users.

Several delegates said that though there was no alternative to backing Unix at present, the directors should broaden the scope of the programme to give the UK greater independence in the future.

After the private meeting, Alvey software director David Talbot's only comment was: "Well, at least I didn't get any bricks thrown at me."

Mark Dowson, of Imperial Software Technology, one of the critics

They have signed a deal for Software Sciences to distribute and support the product in the UK. It will be able to take up to 64 host machines.

Prices will start at about £50,000. Britton claims that an IBM-PC and his purpose-built add-on will have more power than a 4300 running a package.

Timing will be of the essence. Field leader was Intel, with a machine which may have been pitched at too low a level to gain much success. It was the same snag that held up Britton-Lee.

"We don't want to leave too much to the user, so we have to get it right before the launch," he says.

IBM itself meanwhile will probably follow with such a device. Software Sciences marketing director Fred Eldridge said such systems would have important implications when the new data protection law forced users to store their data more securely.

ELDRIDGE... Important implications under privacy law.

## Alvey reliance on Unix is questioned

DOUBTS about the Alvey Programme's commitment to Unix were raised at a seminar attended by representatives of 100 British firms last week.

The directors of the national fifth generation plan were warned it would be unwise to rely on enhancing an American product while speculation was mounting about a possible technical embargo.

Several delegates said that though there was no alternative to backing Unix at present, the directors should broaden the scope of the programme to give the UK greater independence in the future.

After the private meeting, Alvey software director David Talbot's only comment was: "Well, at least I didn't get any bricks thrown at me."

Mark Dowson, of Imperial Software Technology, one of the critics

claims, when running IBM's SQL package on a 4300 and will not be much alleviated when it offers DB-2 running under MVS on a more powerful machine.

Similar troubles occur with most other makes of hardware. In 1979 he and Lee, who were systems builders for BASF, tried to interconnect BASF in backing the idea of a hardware-independent database machine. But they say BASF did not know what they meant. So they raised £11.5 million capital for their own firm to do the development - most of it from the UK, including a contribution from the British Technology Group.

## New Ada ideas are flooding in

Michael Pickett, senior Ada consultant of the CACI group, continues the series he began last October on Ada development.

A PROGRAMMER really has quite an easy job. There are only two things to be done: get the system working and keep it working. Unfortunately, that can turn into a lifetime's work if insufficient attention is paid to any particular aspect of the lifetime of the system.

It is usual to consider a computer-based system as having a life cycle rather than a lifetime. In that often it replaces an earlier (perhaps non-computer based) system, and it is expected that one day it will be replaced in its turn by something better.

During that life cycle the system evolves from something that can best be described as a need or a want (not the same thing) to an artefact which, to a greater or lesser extent, reflects that initial concept. On the way many phases can be identified, but there is as yet no standard classification for these phases.

A typical life cycle model might encompass the identification of the need, an initial statement of requirements, an analysis of the requirements resulting in a specification, conversion of the specification into a design for the system, followed by a specific implementation of that design.

The life cycle does not end there, though. Often along the way compromises are made; facets of what is to be done are misconstrued; sometimes even mistakes are made. More fundamentally, time has passed and the need is different. Materialisation and practical application serve to demonstrate both weaknesses and limitations in the concept. Imagination and creativity are given a new lease from which to work. And so the system evolves yet further.

The development of Ada to date is an interesting example of this

life cycle process. By the early 1970s, the US Department of Defence found that its expenditure on software for computers embedded in military equipment was in the region of \$3.5 thousand million a year, largely due to it was thought at the time, to a morass of totally inadequate programming languages which rapidly sucked in the money and showed very little return.

Although deeper investigation revealed that it was the approach to the whole life cycle of the systems that needed review, the

single life cycle model and stick to it at all costs. Real life cycles are not like that. Sometimes extra phases have to be introduced; sometimes phases have to be iterated, as in Ada with Strawman and Woodenman. Ada also had a special phase after 'Timman', a choice between two ways forward: whether to select and standardise on an existing language, or to develop an entirely new language.

In the event, no existing language met the functional requirements as specified in Timman, so a specification for the design of a

new language meeting these requirements was evolved and published as Ironman.

The design phase of the Ada life cycle was undertaken initially by four contractors, but again the phase was iterated, Ironman giving way to Steelman and only two of the contractors continuing with their designs. Eventually just one of the designs was retained and, after considerable refinement, became the Ada language we have today.

Publication of this initial statement of requirements provided the basis for the next stage, the analysis of requirements. The analysis was such that the requirements were refined and republished as Woodenman, to be followed by further analysis and eventually the publication of a functional specification, Timman. It would be wrong to define a

## MICRO NEWS

JACKSON... "Now running at \$100 million a year."

## Altos shifts into OEM business

Robert Parry, Altos micro maker, is refining his act. It has effectively dropped its 8080 products from the line of multi-user business micros, to concentrate on machines using the Intel 8086 processor family allied to the Unix operating system.

And it is starting to move hard into the OEM market, relying on big inroads here to boost turnover to the half-billion dollar mark.

"We are running at \$180 million a year right now," says president Dave Jackson, who reckons to hit \$140 million next financial year and nearly double that the year after.

"The jump will come through getting into the OEM market," he says. "We already have deals with CDC and ADP, and have been stacking large DEC system houses. But I am looking to get about 30% of business through the OEM market, which means bringing in new OEMs."

And bringing in new OEMs means taking them from Convergent Technologies. By the end of the year new machines using Intel's 286 16-bit will be coming from Altos, and will now be aimed squarely at the market presently served by Convergent. Altos will still be working on a high-end OEM machine using Motorola's 32-bit 68020 - just in case it is what the customers want, says Jackson.

"We still sell our 8086 line, but the future looks better with the Intel devices. All the majors have gone with them - especially IBM."

He adds that the 68000 machine is a "goldmine" now, as it sells itself, with no advertising or developing spending.

On the way in Altos' recovery from last year's slack time, caused by falling sales on early products before the new 8086 line really got going, says Jackson, there will be hefty management changes. A clutch of new board members are being recruited, the most recent being LSI Logic's Wilf Carrigan, like Jackson an expatriate Briton made good in California.

Jackson himself is to step aside from direct control of the company. A new president - a good marketer from the computer industry says Jackson - will take over the running of the company.

"We will start acting like a billion dollar company, start taking the risks needed," he adds.

## Forecasters see a semi boom

by Keith Holder

BUSINESS is booming for semiconductor manufacturers, and the industry is set for a bumper year. This is the conclusion of three major research organisations.

Mackintosh Yearbooks, which looks at the European market, estimates an increase in demand of 5.9%, taking the value of orders to \$82 billion.

The strength of the recovery in the semiconductor industry has surprised even the manufacturers, adds the latest Icebreaker Report, and has found the major corporations short of capacity.

Don Beadle, National Semiconductor vice-president for marketing and sales in Europe, admits that his company "has demand above our ability to ship, especially in logic and linear circuitry".

Europe is trailing last year's US recovery, but the battle for market share is hotting up as demand continues to grow.

This has prompted NatSemi to allocate \$200 million for increasing production capacity and research and development, of which some \$50 million will be spent on the company's UK facilities.

But the Japanese stand to gain most in terms of European market share, according to US market research company Dataquest. It estimates that Japanese manufacturers will reach revenues of \$340 million, a rise of 57% over 1982, giving them 10% of the market.

Toshiba UK marketing manager for semiconductors, Phil Paterson, says the company has already had a good year in 1983 - he hopes to double its market share to 3% by 1986.

He confirms that, like NatSemi, Toshiba was running flat out at the moment and plans are at an advanced stage to increase production capacity.

Dataquest says that sales of MOS devices, particularly memory chips, is a major reason

for the advance of companies like Toshiba, Fujitsu and Hitachi in Europe.

Their gains have been almost entirely at the expense of the US companies. European manufacturers have remained relatively stable as a group.

Intel, Motorola and NatSemi all say they expect to increase market share, through new releases and increased demand for popular chips, provided they can make them fast enough.

But Intel has already run into trouble under-estimating the demand for its 80186 and 80188 16-bit processor chips. Despite plans to triple production of the two chips, shortages are expected this year. These may be partially resolved by signing up a second source, like the company's technical partner, Advanced Micro Devices.

One thing the majors all seem confident of is that this level of demand is not transitory.

## Package aims to tempt dealers

PROGRAMMES Technology, subsidiary of the telephone sales outfit Programmes Limited, is on the hunt for dealers to sell its own-label machine. But it claims to offer more than just the Programmes General micro: it is putting together a whole marketing package, including identifiable sales leads and a telephone sales campaign from its parent company.

"Our thinking is that machines come out at the rate of two a day," says Programmes Technology marketing director Martin Hill-Wilson. "You've got to do something that will interest dealers. We don't think a touch-screen or mouse is the way to do this."

"We have a reliable eight-bit business micro and some good software, but the general application market is difficult to identify. Programmes Technology was set up in September last year, not two years ago as stated in an earlier issue."

## This is ridiculous!

Don't put your customers in this position by selling PCs to businesses that are liable to grow. We'll know that a business might start by buying a computer with one job in mind, but it seldom stays that way. If it's bought for accounting, they'll soon get the idea of adding financial planning, word processing and numerous other applications. In a business that's growing that means more and more people will want to use the computer, eventually at the same time. And if you've sold them a PC they can't. On the other hand, if you'd sold them an Equinox multi-user multi-processor system at the start, they could have expanded as the need arose.

## Quash computer queues with Equinox

Equinox. One of the best self-contained, multi-user, multi-processor systems available. Built to very high standards

# RESEARCH

## Down-to-earth academics tempt the purse-strings

Funding for research comes readily to those projects with commercial potential, as David Casey finds out

TO DESCRIBE a scientist as an academic a generation ago was to recognise his commitment to research in a teaching environment, free from the pressures of commercialism. In the most materialistic world of 1984, that same label is more often applied scathingly to a researcher whose activities have little prospect of commercial exploitation — a potential drain on resources which are already stretched by public spending cuts.

Central government funding currently provides 80% of finance consumed by postgraduate research in our universities. To say that the British taxpayer must see an equitable return on the invest-

ment would be to deny any broader educational role for these establishments in our society. Political overtones apart, for Whitehall to intervene in the allocation of finance to universities would permit an unacceptable degree of state control in research. The present Secretary of State at the Department of Education and Science, Sir Keith Joseph, readily agrees that the system of funding this sector through the University Grants Committee (UGC) is the most acceptable approach. There is even a commendable degree of detachment shown by otherwise controversial local authorities, which control the bulk of finance reaching the polytechnics.

Like its paymaster, the UGC is quick to delegate responsibility for postgraduate research. It operates by grant-aiding the universities. Funds available each year seem to be allocated on a completely arbitrary basis — in practice, however, the committee claims it takes several factors into account before announcing the grant to each university.

But what those factors are, and the extent to which they influence the size of the grant, is not revealed. It is admitted that the technological requirements of each establishment have a bearing; how

far the previous track record of a university in productive research influences the committee must be a matter for conjecture. Such circumstantial evidence on the part of a body disbursing public research funds is regrettable. Greater disclosure of the criteria could help the universities structure their programmes in applied technology to a pattern coordinated by the committee. Far from imposing authoritarian control, such an approach would ensure that research projects of national importance were funded, and that there was still a fair allocation of money for more rarified "pure" research.

With the system as it is, however, pitched battles rage within the universities for most of the academic year, while it is decided how the grants are to be divided between competing interests. In an environment where personalities have greater influence on the outcome than the merits of their case might deserve, an undue proportion of the funds available for research may be directed into strictly "academic" channels.

One factor which does not seem to have a bearing on UGC deliberations is the amount of money received each year from the specialised research councils and charitable institutions. The Science and Engineering Research Council (SERC) includes computing and its applications in its responsibilities. With a total of £200 million worth of research grants outstanding in March 1983, SERC funds research in areas as diverse as polymer engineering and aspects of archaeology.

The funds committed at that time to information technology and Alvey programme subjects stood at £26.7 million — a 13% slice of the SERC research cake. Rather more open about its activities than the UGC, SERC states among its objectives "identifying and supporting areas of special importance, particularly where the national interest is concerned" and the training of graduates in areas of science and engineering which are of importance to British industry. With its selection criteria drawing on these objectives, the

council recommended just over 2,100 projects in the last financial year. The support approved was £84 million; a total of 4,600 applications had been made for £228 million. Information engineering projects supported by the council took the lion's share of the funding — accounting for only 10% of the total number of grants, this sector was awarded 20% of the funds.

Compared with the total resources of SERC and its counterparts in agriculture and medicine, the ability of the charitable institutions to finance research is minuscule. But institutions like the Wolfson Foundation, with its Technology Scheme, do have an important role in higher education.

Dr Leonard Rotherham, a former vice-chancellor of Bath University, is adviser to the Wolfson trustees on grants. He explains that there is no particular bias towards computer hardware or software. "The fund covers any branch of science, provided that the research can eventually be applied to an industrial application," he says. "This definition may be widely interpreted, but at the end of the third year of a project, we would expect the research to have yielded some positive advantage."

To 1983, the trustees made a total of 19 grants from the fund — the largest was £180,000 for a materials science study — and Dr Rotherham expects around the same number to be awarded this year. The spread of disciplines supported under the Wolfson Technology Scheme is broad, but computer-related projects have received their fair share. The University College of North Wales at Bangor, for example, was able to develop software for the optimisation of circuit design — inherently theoretical, but with direct commercial applications. One of the organisations well placed to find that critical stage is Investors in Industry (Ii), the new incarnation of the Finance For Industry group, which includes ICFC and is jointly owned by the Bank of England and the UK clearing banks. Its Technical Development Capital (TDC) sub-

JOSEPH... Agrees funding through UGC is most acceptable approach.

due to be opened by the Prime Minister later this month. Perhaps the most significant of the projects funded from this source is the Barclays chair of microcomputer applications in industry at Manchester — a £250,000 endowment originally provided to finance a professorship and two research fellows. The incumbent, Professor Frank Sumner, explains that one project had been commercialised and had helped the unit expand to 10 staff without eroding the capital of the endowment. "Yunan, a company wholly owned by the university, has a £750,000 turnover from the VuWriter scientific word processing developed here in the department."

Ian Duffell, manager of Barclays' high technology team, is encouraged by the work in the universities. But he believes that the bank should not be funding pure research in the commercial sector. "It is not what the depositors expect from a clearing bank. Our expertise lies more in providing the range of financial support beyond the research phase, with venture capital where appropriate from the merchant bank, leasing companies and the bank's development capital fund."

Duffell does not accept that Barclays is only dabbling in high technology. "Our total investment in this sector now exceeds £1 billion — as much as the bank's commit-

ment to agriculture." Developing its role as a catalyst in the funding of high technology, Barclays is sponsoring Technart at the NEC from February 21 to 25. The 120 exhibitors hope to attract visitors prepared to license developments or help their research progress to production. One person likely to take the opportunity provided by Technart to meet the higher education sector is Dr John Waller, who co-ordinates relations between the universities and the British Technology Group. BTG, the umbrella for the old National Research and Development Corporation (NRDC) and National Enterprise Board, invests between £2 million and £3 million a year in about 100 university projects.

Dr Waller explains that, because few university staff have a background in marketing, the preferred route is to license the development to an established British company. He sees software ventures as the main exception, however. "There are many examples where academics can do very well."

And the price of BTG support? There is an equity stake of up to 25% — which the group will hope to sell at a profit in a reasonable time scale — and the assignment of patent or licensing rights to BTG.

David Casey is a freelance journalist.

complex products are now getting into the hands of non-professionals

expect to have experience of the whole field: image processing, for example, is very different from dialogue.

When Brian Oakley was asked about the four areas which the Alvey directorate had specified for research, he described man-machine interfaces as the Cinderella of the four.

And, indeed, when compared with solid specific subjects like software engineering and VLSI, the problem of man-machine interface does begin to sound a little airy-fairy.

All pervasive, covering all aspects of a company's business, spread throughout a firm's operations or a university's disciplines, requiring and touching upon diverse skills from psychology to mathematics — in fact, meaning all things to all men — the area is as difficult to define as it is to limit.

Plessey's Chris Barrow has been seconded to the Department of Trade and Industry to head the Alvey team on man-machine interface. Why Barrow? His answer is that question expresses many of the problems he has to face.

"My interest was really in telecommunications," he explains, "and then I became interested in office automation, where the user interface is all-important. Man-machine interface is a fairly specialised field, but it does cover a lot of skills. No one person can

strategies and producing a document on the subject. To do this, the group has had to call for help from over 200 people in industry, academia and government departments.

Three areas have already been defined: human interfaces, focussing on interactive interfaces from the human to the machine; pattern analysis, which will include image and speech processing; and some display work.

Although the document makes reference to each of these areas, it does not expand on any of them. Starting this month, a series of workshops is to take place concentrating on the different areas involving 30 to 40 experts in the relevant fields.

The five workshops, which are residential and will each last for two days, are expected to produce concrete ideas for possible areas for research. Fairly short reference will be taken, says Barrow, and they will be expanded by the specialist groups to ensure covering all areas.

When the output from the groups is assimilated, probably by the beginning of March, some clear idea of research should have emerged. But it will be a daunting task, and if the process seems cumbersome and vague, then it is because it is necessarily so — the nature of the subject being what it is, and with 200 people from widely differing backgrounds and disciplines all itching to have their say.

One reason the interface is so important is that complex products are now getting into the hands of non-professionals. The rapid increase in the number of novices using or wanting to use a computer has made it in industry's interest to perfect a product which makes that easier.

One company which is trying to do just that is Linsyst, headed by Ian Litterick. With funding from the British Technology Group (BTG), Litterick has worked on a one-handed keyboard which is now at the prototype stage.

Litterick sees the product as being the basis for several ideas. "It was designed for a pocket computer with a flat fold-out screen," he says. "The brief was simply that they keyboard should be smaller in size than a paperback book, and that there should be a key for each letter like the Qwerty keyboard on a normal typewriter."

"It is easy to use and simple to learn," he says. "There are really possible areas of use — either a company could simply use it as a keyboard and integrate it into other machines, or substitute it for a normal Qwerty keyboard for desktop use, so that it takes up less space, and leaves room for a desk full of papers — making it really a tool among other tools."

Linsyst hopes to be "in close negotiations" with manufacturers over the next six months.

Other projects are more long-term.

At GEC, for example, Peter Collins wears two hats in his involvement with man-machine interface work.

Collins concerns himself with speech and image processing but points out that all the product units within GEC are working on more short-term projects with a view to launching products within a year or two.

Much more so than other areas mapped out for Alvey funding, the ground for unifying the various disciplines touching on man-machine interface must be laid before the Alvey directorate can proceed. In this way, the project will take longer and be more complex than probably any other begun under the present UK initiative.

Judith Morris is editor of Computer Talk.

### RESEARCH

## Pinning down the airy-fairy

Man machine interface has no concrete definition or limits. Judith Morris finds out how research is dealing with it

WHEN Brian Oakley was asked about the four areas which the Alvey directorate had specified for research, he described man-machine interfaces as the Cinderella of the four.

And, indeed, when compared with solid specific subjects like software engineering and VLSI, the problem of man-machine interface does begin to sound a little airy-fairy.

All pervasive, covering all aspects of a company's business, spread throughout a firm's operations or a university's disciplines, requiring and touching upon diverse skills from psychology to mathematics — in fact, meaning all things to all men — the area is as difficult to define as it is to limit.

Plessey's Chris Barrow has been seconded to the Department of Trade and Industry to head the Alvey team on man-machine interface. Why Barrow? His answer is that question expresses many of the problems he has to face.

"My interest was really in telecommunications," he explains, "and then I became interested in office automation, where the user interface is all-important. Man-machine interface is a fairly specialised field, but it does cover a lot of skills. No one person can

Complex products are now getting into the hands of non-professionals

expect to have experience of the whole field: image processing, for example, is very different from dialogue.

"I have had a very wide experience," he adds, "which qualifies me as well as anyone to look into this problem."

So what is the problem? Immediately, it is to define the area and to try and bring the different aspects and applications of it together.

"Some of the areas mapped out for funding," says Barrow, "such as VLSI, for example, which is a very 'high profile' area — are more obvious than others."

"Man-machine interface is not a high profile area, but it does cover absolutely everything we create in the information technology field. It is not easy to bring it all together."

"For example, there is no part of the university scene which covers it. The Applied Psychology Unit at Cambridge is doing work on it and computer science departments up and down the country are looking into it, but it is an inter-disciplinary subject."

Because there is no university or company which has an office with the words "man-machine interface" on the door, the Alvey group under Barrow's direction is having to start more or less from scratch.

At the moment, a large number of people are involved in the study at many different levels. Like the other topic areas picked out by Alvey, the directorate will be making

strategies and producing a document on the subject.

To do this, the group has had to call for help from over 200 people in industry, academia and government departments.

Three areas have already been defined: human interfaces, focussing on interactive interfaces from the human to the machine; pattern analysis, which will include image and speech processing; and some display work.

Although the document makes reference to each of these areas, it does not expand on any of them. Starting this month, a series of workshops is to take place concentrating on the different areas involving 30 to 40 experts in the relevant fields.

The five workshops, which are residential and will each last for two days, are expected to produce concrete ideas for possible areas for research. Fairly short reference will be taken, says Barrow, and they will be expanded by the specialist groups to ensure covering all areas.

When the output from the groups is assimilated, probably by the beginning of March, some clear idea of research should have emerged. But it will be a daunting task, and if the process seems cumbersome and vague, then it is because it is necessarily so — the nature of the subject being what it is, and with 200 people from widely differing backgrounds and disciplines all itching to have their say.

One reason the interface is so important is that complex products are now getting into the hands of non-professionals. The rapid increase in the number of novices using or wanting to use a computer has made it in industry's interest to perfect a product which makes that easier.

One company which is trying to do just that is Linsyst, headed by Ian Litterick. With funding from the British Technology Group (BTG), Litterick has worked on a one-handed keyboard which is now at the prototype stage.

Litterick sees the product as being the basis for several ideas. "It was designed for a pocket computer with a flat fold-out screen," he says. "The brief was simply that they keyboard should be smaller in size than a paperback book, and that there should be a key for each letter like the Qwerty keyboard on a normal typewriter."

"It is easy to use and simple to learn," he says. "There are really possible areas of use — either a company could simply use it as a keyboard and integrate it into other machines, or substitute it for a normal Qwerty keyboard for desktop use, so that it takes up less space, and leaves room for a desk full of papers — making it really a tool among other tools."

Linsyst hopes to be "in close negotiations" with manufacturers over the next six months.

Other projects are more long-term.

At GEC, for example, Peter Collins wears two hats in his involvement with man-machine interface work.

Collins concerns himself with speech and image processing but points out that all the product units within GEC are working on more short-term projects with a view to launching products within a year or two.

Much more so than other areas mapped out for Alvey funding, the ground for unifying the various disciplines touching on man-machine interface must be laid before the Alvey directorate can proceed. In this way, the project will take longer and be more complex than probably any other begun under the present UK initiative.

## hoskyns Gold

One of the biggest areas of growth in the rapidly expanding world of computer technology is the personal computer.

Now, for the first time, there is a special service that recognises the needs of volume users; that is designed to help them get the best out of the new opportunities that the personal computer presents. That service is Hoskyns Gold.

Hoskyns is probably the largest and most respected

### At last there's a service which recognises the needs of the volume personal computer buyer.

Independent supplier of computer systems to the commercial sector in the UK — and can offer you, the corporate personal computer user, an unparalleled range of benefits. Using Hoskyns Gold you can:

- Purchase any of the leading personal computers through Hoskyns Business Centres: the IBM range — the PC and XT, and soon the PC Junior and XT/370; the Digital range, from the Rainbow DECmate-II to the Professional; Apple's Lisa and Macintosh and the Hewlett-Packard 150.
- Qualify for the highest discount level when you buy any mix of machines from Hoskyns.

Hoskyns Business Centres, Africa House, 64-78 Kingsway, London WC2B 6BL.

MAKING COMPUTERS WORK FOR YOU

Johnnie 1210

Barclays has invested in university projects as a commitment to "social responsibility"

ment would be to deny any broader educational role for these establishments in our society. Political overtones apart, for Whitehall to intervene in the allocation of finance to universities would permit an unacceptable degree of state control in research. The present Secretary of State at the Department of Education and Science, Sir Keith Joseph, readily agrees that the system of funding this sector through the University Grants Committee (UGC) is the most acceptable approach. There is even a commendable degree of detachment shown by otherwise controversial local authorities, which control the bulk of finance reaching the polytechnics.

Like its paymaster, the UGC is quick to delegate responsibility for postgraduate research. It operates by grant-aiding the universities. Funds available each year seem to be allocated on a completely arbitrary basis — in practice, however, the committee claims it takes several factors into account before announcing the grant to each university.

But what those factors are, and the extent to which they influence the size of the grant, is not revealed. It is admitted that the technological requirements of each establishment have a bearing; how

far the previous track record of a university in productive research influences the committee must be a matter for conjecture. Such circumstantial evidence on the part of a body disbursing public research funds is regrettable. Greater disclosure of the criteria could help the universities structure their programmes in applied technology to a pattern coordinated by the committee. Far from imposing authoritarian control, such an approach would ensure that research projects of national importance were funded, and that there was still a fair allocation of money for more rarified "pure" research.

With the system as it is, however, pitched battles rage within the universities for most of the academic year, while it is decided how the grants are to be divided between competing interests. In an environment where personalities have greater influence on the outcome than the merits of their case might deserve, an undue proportion of the funds available for research may be directed into strictly "academic" channels.

TAYLOR... "We often take a seat on the board, but it is certainly not to control the business."

## RESEARCH

Support for microcircuit engineering operations previously funded by SERC may be reduced, warns Hedley Voysey

# Alvey could stultify university work

ONE of the ironies surrounding the creation of the Alvey Directorate is that it may stultify some areas of work within British universities. The simple reason is that the scale of funding for Alvey schedules of work will act to reduce the level of support for university operations in microcircuit engineering that would previously have been funded by the Science and Engineering Research Council.

Tracking developments in Very Large Scale Integration (VLSI) in the UK is difficult. On the one hand, some significant developments are revealed rather belatedly so as to avoid any possible reduction in their commercial advantage.

On the other hand, there is so

much fragmentation of the UK development activity that many interesting pieces of study fail to be linked up with other work and so soon peter out in their impact.

There is also a perverse feeling of exhaustion among workers in the microcircuit engineering field. After striving to get the Alvey idea to the starting gate, it seems too much to expect an extended period of ideas to follow on immediately.

Just as the Alvey study arose from near-panic about Japanese expressions of intent, it seems that new UK ideas need prodding into circulation by US industrial achievements.

For instance, the MicroVax has emerged from Digital Equipment, and this has served to re-focus some attention in the UK on the

design methods used to create the MicroVax.

Although there is nothing very startling about the methods used, it serves to remind UK firms that Digital Equipment chose contractually to exploit the services and products of Silicon Compilers Inc. Therefore, some industrial houses have taken a renewed interest in what is available in silicon compiling services here in the UK.

"Silicon compiling" is the rather informal term used among design engineers to cover aspects of computer-aided engineering in microcircuit logic design.

By analogy with classic program compilation, the aims of a complete silicon compiler are to start with functional descriptions of what the chip is to do, and by completing all the transformations involved automatically, to arrive at the end with a physical layout for use via a particular chip-making process. This idealised view accounts for the use of the term.

In practice, silicon compilers try to use the logic design habits of earlier technologies and help in the correct design of chips. Since there is a constant need to let the designer intervene in the chip design as basic constraints on what can be done emerge, the process of using a silicon compiler is a highly interactive one.

The real achievements in this field so far have enabled designers to detach themselves from detail which distracts them when making basic design decisions. At the same time, the design aids should give opportunities for fine tuning of designs to optimise final chip performance when this is essential.

Clearly, a silicon compiler used for gate array implementations is a different animal from one dealing with putting a volume microprocessor scheme on to a chip.

Although there are few comparable design tasks awaiting completion in the UK equivalent to the one faced by Digital Equipment (in creating the MicroVax), the route taken by Digital has served notice on many UK electronics firms that products are better designed in silicon these days than on printed circuit boards.

Bill Talbot, who once headed up engineering in ICL and who now consults as Talbot Technology, believes that "if appropriate methods are used, the advantages of designing in silicon can be considerable for many major UK enterprises".

The last year has seen some favourable light shone on the work of Lattice Logic of Edinburgh, which can be regarded as originating its design system from within Edinburgh University. Lattice Logic would not claim that it had produced a silicon compiler on a grand scale, but its methods do abstract designs to a degree.

The versatility of the system has been rather fully demonstrated by adapting the whole box of tricks to work with Ferranti's gate array processes, which are not at all like the processes for which it was originally built.

David Eglon of Lattice Logic has some warm words for the Ferranti chip-making system: "It enables both analogue and digital tricks to be combined and it can provide a quick way to evolve a new product to fill a market demand from within the UK instead of relying on imports."

Eglon does not think that the Ferranti process has yet reached the end of its life by quite a fair margin.

Although the whole business of gate array design is somewhat old hat, the fact remains that for many

UK firms the logic that needs about 1,000 gates fills many of the needs that are not met by very large volume standard products.

The development required is the fastest possible turnaround in prototyping the design at reasonable cost: a combination that may bore real researchers to tears, but it is hard to find today and it has significant effects on industrial competitiveness.

The splendid quality of work done at GEC is respected, but the more amazing things done with silicon-on-sapphire by GEC are mostly of use to the military for the moment. Although the same is not true of Plessey's gallop into gallium arsenide, because it has large scale potential in fibre-optic based digital transmission circuits and satellite communications systems, the fact remains that the media attention on the topic is unrelated to most industrial criteria.

Innos suffers in the same way because its achievements are not exotic enough for the media. The achievement is worthy of note. It is a silicon house that has made the transition to complementary metal

Taking the whole span of work in the US into consideration, it leaves the impression that a fundamental change is taking place in design habits. As yet this is simply not true in the UK

oxide silicon (CMOS) using a process which is akin to the Bell Laboratory development.

It is fairly obvious that Innos cannot turn itself into a jobbing house to serve the custom design needs of the UK. However, it has plans to exploit its trendy design system to carry out semi-custom designs where volume is large.

The design goodies produced via the Innos team may be just what the Alvey Directorate section working in VLSI under Dr Bill Fawcett is looking for, in at least some part of the project.

If the VLSI project is to have any meaning, there will need to be a breadth about its design systems, because what is needed to produce special signal processing answers to VLSI is not necessarily a design system which serves some other set of digital functions. There is still a need to blend the analogue and digital pieces of designs.

Real advances in silicon compiling methods are being made in our universities, but it is doubtful if these will be coerced in time to transform the design practices of most of the middle rank firms to beat overseas competition.

This research feature is continued on page 35.

JULY

## What a source!

You know what they say. About there being lies, damned lies and statistics?

Well fortunately, there are ABC figures as well. And they are in black and white for anyone to check on. (At least, they are for all the publications that matter.)

So remember, although there are quite a few publications that claim to reach computer professionals, it pays to check their sources.

### computing

The industry's most widely read weekly.

# Yes. What a sauce!

We hope this advertisement will set the record straight, once and for all. Computer Weekly's ABC figure for July-December 1983 is 120,139 while Computing's ABC figure, over the same six month period, and not June-December as they have mistakenly quoted, is only 110,920.

What makes us even more confident that our figures are more accurate is the fact that each Computer Weekly reader is verified every 12 months, unlike our competitors who wait 3 years.

In addition, our circulation is updated with newcomers to the market from unique applications at Computer Weekly's own shows: COMPEC and the regional COMECS.

So, to summarise, Computer Weekly has always been the best read journal in the business for reaching key job-hunters and purchasing decision makers at all levels.

And still is.

### An International Assignment With a Difference

Week-ends basking in the sun

If you happen to be one of the DEC engineers that we are looking for, you could be alongside a crystal clear pool with a beer in your hand, or maybe indulging in your favourite outdoor week-end activity. These are just some of the perks that we, the leading supplier of DEC systems in South Africa can offer you.

You should have had at least 3 years hardware support experience on DEC 11, 70, VAX 750 and VAX 780 range of CPUs, have peripheral qualifications consistent with regional support capabilities and be prepared to enter a two year agreement or alternatively be considering permanent residence in South Africa.

We are a well established international organisation who, in exchange for your qualifications, can offer a £15,000 p.a. package, benefits which include excellent career prospects, job satisfaction, excellent pension fund, medical aid and car scheme, a renewable contract or permanent post, return air fares and relocation allowance, as well as initial accommodation.

If you would like to consider a move to sunny South Africa, in the first instance, telephone or write for an appointment to our consultant,

## JOBS IN SALES AND MARKETING

A technical bent is a plus for those looking for a position . . . Steven Sorsino looks at the state of the market

# Find how it works before trying to sell

"Moog is so excited. He's just discovered packaging."

TIME marketing and selling of computer equipment appears to present no problem in job creation. As with most areas of the industry there is a shortage of good skilled people.

Some areas, like selling peripherals, are so cut and thrust that huge sums have to be spent to push "name" products: so sales and marketing workforces are usually quite large here.

Traditionally, sales positions have been the less well paid of the two jobs, but there are perks, usually including company car, and sometimes substantial bonuses.

Marketing posts in many cases have become extremely creative, and some companies involve marketing personnel in designing products as well as in promoting them.

There are many routes into sales and marketing, not least from engineering or technical backgrounds. Sales staff who know how products work (and can show customers how they work) are valuable contacts for the customer — and quite valuable to a company, too.

It can also pay to be technically minded in marketing positions. Knowing the good and bad points of products is the first step towards knowing how to promote them.

As for marketing jobs in the computer industry, "the world's your oyster," says one marketing executive. "Computers are being used in every avenue of life and new markets are being developed everywhere."

The world needs an endless supply of people who understand the capabilities and failings of computers to sell and market them.

Within the peripheral business, marketing becomes a little more difficult, says Phil Mobsby, a marketing manager for Dataproducts in the UK. "You're marketing to the industry, not to the whole world," he says, and it can be difficult to organise volume shipments.

"In our company, we like sales and marketing people to be adaptable. We also like them to understand the history of the particular part of the industry they deal with," is his comment.

"Because the company is still

fairly small in the UK, we need people with a little experience. We don't really have the facilities for training of the ICLs and DEC's."

For smaller companies the computer industry is a "dogfight," he adds. "It's the survival of the fittest."

There is hope, though, for graduates and YOP scheme youngsters, says Mobsby. "Training schemes operate within most of the big companies, and failing that there is always the micro business."

Micros are fairly easy to under-

stand for students because of their college or school training and the widespread use of the home computer.

There is a 17-year-old in the south-east who, for a price, installs home computers and explains to parents and children alike how to use them. He will explain the documentation that comes with the computers and answer any questions a family might have, as well as suggesting applications that no one in the family may have thought of.

The bottom end of the computer market is a bit like the hi-fi market. Some users are now becoming so knowledgeable that they can buy the right equipment for a system, thus no longer needing an OEM or systems integrator.

The user will "buy all the bits and bolt them together," as one marketing director puts it.

These kinds of people are identifying a niche and filling it to the best of their abilities. And it is these people who will become the sales and marketing managers of the future.

Trying to market printers is difficult, said a spokesman for Anadex, although printer sales increased overall in 1983. The problem is that not many people take an interest in individual peripherals and sales or marketing pitches can often be wasted on the potential buyer.

Where sales were once made to

data processing managers, who knew a company's output requirements, most volume printer sales are now made to system dealers. The dealers then package the printer with a keyboard and terminal for the business systems market. The printer does, of course, have a different name on the front.

"This makes sales and marketing jobs much harder," he says. One answer is to improve the products.

Another is to cut prices. Anadex has done both, increasing the speed of its printheads by 20% and cutting the prices of all its printers by a similar figure.

According to Gianluigi Bertino, OEM sales manager for Olivetti Peripherals Equipment, a college or university education cannot do too much for individuals who want to get into sales or marketing of OEM products. There are, however, "lots of opportunities within micro-associated industries for people who want this kind of job."

Olivetti takes on graduates for marketing and sales. "They become involved in project planning from a very early stage — this is a most important part of any operation," he says.

Marketing personnel take part in product launches within Olivetti, then following the success or otherwise of the launch they analyse and launch further new products based on the results.

"In the industry as a whole, there are plenty of opportunities for people wanting to work in sales and marketing," says Bertino. "About 15% of Olivetti's resources are spent on sales and marketing — it's that important."

Mobsby adds: "There are all kinds of new directions that sales and marketing posts can take. New areas are developing all the time and these will require new people to take them up, with new ideas."

Steven Sorsino is features editor of Systems International.

## Micro Sales Opportunities

Blue Chip manufacturer with substantial user base, one of the first on the scene with every intention of staying in front is currently seeking Sales Professionals as a result of continuing expansion.

**Major Accounts  
£27K on target**

To sell the entire product range to the Times Top 500 companies.

**Dealer Manager  
£23K on target**

To take over responsibility for well established territory (London and West) whilst recruiting and developing new accounts including OEMs.

You will need to have a good track record of selling within the computer industry, and have an understanding of commercial software. For Major Accounts, knowledge of a vertical market would be a distinct advantage. For Dealer manager proven ability to negotiate and broad experience of competitive hardware is essential.

Terms of employment are excellent and include an Executive Car, Private Health Insurance, exotic conventions, carefully designed incentive plans and genuine opportunities to progress into first line management.

To apply, please telephone or write quoting ref. 7557.

The Sales Recruitment specialists...

## SALES PROFESSIONALS ... Review your potential with UCA...

With the start of 1984 many companies are looking towards new markets for their products, and UCA now have over 100 current Sales and Sales Management opportunities in London, the Home Counties, Birmingham and Glasgow.

Training opportunities also exist for people with applications experience in the banking, medical or accountancy professions interested in a career move into the challenging (& highly lucrative) sales field.

**Micro Sales Account Manager  
Home Counties**

**o.t.e £27,000+  
2.3 Litre Car**

Our Client is one of the microcomputer market leaders and has substantially increased its turnover each year and looks set to do so again. They can now offer several new opportunities and will represent an exceptional career move if you have at least 2 years business systems experience and enjoy selling software based solutions. CP/M, MSDOS, VAX or UNIX products experience would also be an advantage.

**Business Model Sales  
London**

**o.t.e £25,000+  
BMW Car**

Following the UK launch last year of one of the U.S.A.'s most successful mainframe and micro Business Models, demand has been so high that two superb new opportunities can now be offered in this field where every major computer user is a potential customer. Our Client is a top-grade organisation and is keen to talk to sales professionals with a proven track record and a working knowledge of accounting systems or financial models.

For further details and an informal discussion in confidence, please ring 01-958 3131/6138 now up to 9pm each evening.

(7525)

**UCA**

Computer Services Recruitment Consultants  
UNIVERSAL COMPUTER ASSOCIATES LTD  
12 ADELPHI, LONDON WC2E 7AP  
01-958 3131/6138

are an established Life Assurance Company (a member of the world-wide Winterthur Swiss Insurance Group), currently situated close to Liverpool Street Station. The company intends to relocate to Hampshire within the next 2 years.

Expansion of our systems has taken place over the past few years and we now operate large and complex real time and batch systems on two ICL 2958 processors. In addition, two Systime mini computers (DEC-PDP11) are used, running under RSTS/E.

As a result of the company's commitment to further major development, we have the following requirements.

**Systems Analyst  
c. £11,500**

Candidates should have a minimum of 2 years experience, preferably gained in a financial environment, that has covered the major phases of a development project. Knowledge of ICL IDMS would also be a distinct advantage.

**Analyst/Programmer  
c. £11,500**

For this position the ideal candidate should have 3-4 years experience including a solid ICL COBOL background coupled with sound systems experience. Formal systems training would also be desirable.

**Assistant Operations  
Supervisor c. £10,000**

Applicants will probably have held a senior position in the operations area such as chief operator or shift leader and will therefore be able to work on their own initiative. Sound experience in most of the following areas is essential:

— DME Operating & Utilities  
— VME Operating  
— Q2+ Macro Writing  
— VME SCL Writing

However the most important attributes are self motivation, adaptability and the genuine desire to make a varied and all round contribution to the running of the operations section.

In addition to regular salary reviews, we offer a generous benefits package which includes a staff mortgage scheme, non-contributory pension, flexitime, season ticket loan, free lunches and a Christmas bonus. A relocation package will also be available as appropriate.

If you think you have the drive and relevant experience for any of these requirements please call Christine McLean on 01-734 7394, to discuss the positions or send your CV to this address.

**WARWICK  
WOODWARD**  
43-44 GREAT WINDMILL STREET,  
LONDON W1V 7PA.

# We have the name... Have you the talent!

## NEWBURY — SOFTWARE SALES AND MARKETING

We are Micro Focus — one of the fastest growing software product companies in the world. Our prestigious new headquarters building is located in Newbury, Berkshire, with additional offices in the USA.

Micro Focus has a unique product line enabling the use of COBOL on a wide range of micro-computers, backed up by a powerful set of development tools. In 1983 we achieved an extremely successful flotation on the Unlisted Securities Market and are now implementing an ambitious programme of growth.

With that background, Micro Focus is the perfect environment for ambitious Sales and Marketing professionals — energetic self-starters with a real desire to succeed in our expanding market.

Can you contribute in one of the following areas?

French/German Sales  
French Sales  
European Sales

Knowledge of software, an understanding of the micro software market and a technical background will all be useful. A proven track record in selling is essential. For European Sales communication ability in French/German is vital.

Product Marketing  
Marketing Services  
Marketing Communications  
Public Relations

We seek bright, articulate people with the experience and flair to contribute in these fields. A background in the software industry is essential with the ability to demonstrate proven success in your current area of expertise.

With a growth rate such as ours the career and salary opportunities are exceptional. Your drive and commitment can thus be well rewarded. As well as excellent remuneration, benefits will include relocation assistance where appropriate.

For further information concerning any position contact:  
Miss Ann Jackson Micro Focus Group Limited  
26 West Street, Newbury, Berkshire.  
on 0635-33518 (Direct) or 32646 x223  
or clip and return the FREEPOST coupon to Myriad quoting  
RW 0202IMF

## A SENSE OF ACHIEVEMENT

### SYSTEMS AND PRODUCT SALES EXECUTIVES TO £35,000 + CAR

The highest standards of excellence, across a broad spectrum of applications, has earned Software Sciences an enviable reputation for providing successful systems. A professional approach combined with technical expertise, has enabled us to become one of the largest systems houses in the UK.

An increasing market for our services internationally has produced opportunities for accomplished Sales Executives to contribute to our progressive and substantial growth.

Applicants should have a proven track record of creating capital value sales from initiation, through bid preparation and negotiation to successful close.

Experience of one or more of the following is essential, Commercial Systems, Office Automation, Software Products, Civil C & C, Military C & C, Defence. A working knowledge of technical and operational requirements in these disciplines will probably have been gained with a manufacturer, systems house or systems engineering company.

In return we offer a high basic salary, initial commission guarantee, company car and an excellent range of company benefits. Assistance with relocation will be given where necessary.

To apply, please telephone our consultant Francesca Drinkwater or send a detailed C.V.

Location:  
Farnborough, Hampshire.

## SALES '84

There are a few people  
who could make  
Isaac Newton turn  
in his grave...

There are a few professionals who through one simple quality, ambition, can put paid to the theory what goes up must come down. This sheer determination to get ahead keeps their careers progressive and optimises the scope of their responsibilities. But they need the right environment. In only a few years HAL Computers Ltd have grown through a policy of high standards, aggressive marketing and a commitment to some of the best products to become the largest independent peripheral distribution house in Europe. Few other companies can rival their success or opportunities. If you want to get to the top and have the ability this is the company where you will find the head room.

### OEM SALES EXECUTIVE £20K + OTE First Year

With a top product range that includes such names as Toshiba, Amlyn, Tandon, Xebec and SyQuest, your role will be to develop and service a client base that stretches from the North Midlands to the Scottish border. This position is ideally suited to a top flight sales executive with a proven track record in hardware sales based in the North.

### TEST EQUIPMENT SALES EXECUTIVE £20K + OTE First Year

With either a sales or engineering background in electronics equipment you'll be responsible for selling a range of peripheral test equipment in the SW, West, Wales and NW regions.

To find out more about these excellent opportunities call  
Richard Nash on: 01-734 9723  
and 01-581 5829 Evenings  
& Weekends.

Computer Technology Recruitment Ltd.

## SALES SUPPORT CONSULTANTS

£12-14k + CAR  
+ SUBSTANTIAL  
BONUS

HERTS BASE

Our client is one of the world's leading manufacturers of computing, telecommunications and office automation equipment. Operating directly in most European countries the company develops commercially orientated systems using hardware, software and networking resources appropriate to requirements.

As a result of expansion, and in preparation for the launch of a major new product set, we are now seeking to recruit additional pre-sales support consultants who will be based in Hertfordshire and provide support throughout the United Kingdom. Suitable applicants could come from a wide variety of backgrounds where analysis and project management skills are used but should have experience in one of the following areas:-

- Office Automation, LAN's, WAN's etc.
- Commercial D.P. systems
- Turnkey systems based on minicomputers.

The role, an unusually diverse one involving pre-sales systems analysis in order to understand customer requirements and formulate viable hardware/software solutions, also includes organising and participating in exhibitions and seminars, the preparation of major proposals, and project managing the initial phases of systems installation.

Ideal applicants will be those who can combine commercial experience and personal skills with a good level of technical competence. In return the company offers genuine career development opportunities (technical, project management, man management, sales, marketing etc), an excellent salary package and all the benefits associated with large companies such as BUPA and a generous relocation package.

For details of this outstanding opportunity telephone Kevin McCourt (0734) 595316 at our Reading office. Interviews will be held at several locations throughout the South of England.

## SALES ENGINEER

Gresham Lion, a leading systems designer for both the MOD and commercial market are currently seeking an ambitious Sales Engineer who has already cut his teeth in the world of visual display terminals or other peripheral equipment.

We are looking for a professional man or woman who can talk to original equipment manufacturers and users fluently and knowledgeably about our products and the need for incorporating them within a commercial environment.

You will be joining a successful team and because the North will be your exclusive territory it would be preferable if you lived in the Greater Manchester area.

We offer a very attractive salary package including a generous commission scheme, expenses and naturally a company car.

For more information please write to Richard Hancock, enclosing a c.v. to Gresham Lion plc, Gresham House, Twickenham Road, Feltham, Middlesex.  
Tel: 01-894 5511. (Out of hours 01-898 7177).

GRESHAM LION PLC

## SALES MANAGER

to launch new company.  
£35,000 p.a. + car Berkshire  
and SENIOR SALES EXECUTIVE  
£25,000 p.a. + car

To assume total responsibility for the sales drive of this new company, you should be IBM trained with an in-depth knowledge of its plug compatible market.

With an agreement to sell reliable Japanese high-speed band printers, the company is poised for a publicity launch in the Spring. This venture will represent a new specialisation within a group already turning over in excess of £9 million per annum. Rapid growth has resulted from successful penetration into markets as diverse as electro optics and microcomputers.

Reporting directly to the Group Chairman, you will have complete autonomy over the sales function. The holding company is geared to maximise the efficiency and profitability of its subsidiaries. Consequently, each company is judged by its margins rather than the size of its turnover. All services are centralised and maintenance support are of the highest calibre.

In addition to this Sales Manager, we also wish to identify a young sales executive for whom self-motivation and commercial acumen are second nature. The growth potential for both positions is tremendous. In the case of the senior post it could be exceptional - the Managing Director has yet to be appointed.

For further information on either position telephone  
Marc Zundel on 01 236 7222 (or 01 602 0685 evenings/  
weekends), or write to him with full career details at:

**ZUNDEL LITTLE**  
49 Queen Victoria Street, London, EC4N 4SA.  
Telex: 883968 HEADS

All applications will be treated in the strictest confidence.

## Marketing Services Manager

Computer graphics  
negotiable salary  
+ car

Sigmex is the wholly-owned sales and marketing subsidiary of Sigma Electronic Systems, Europe's leading designer and manufacturer of computer graphic display products.

In this newly-created position, you will be responsible to the Marketing Director for managing and motivating a team providing all commercial aspects of marketing in a highly technical field. You will also be expected to provide marketing consultancy services worldwide in support of overseas subsidiaries and agents.

A professional marketer, probably in your 30s and educated to degree level or equivalent in a business discipline, you must have sound and wide-ranging marketing experience gained within the computer industry, with specific responsibility for scientific and industrial markets. Well-developed communication skills and powers of persuasion are a prerequisite.

Salary will be made attractive to high-calibre men and women who meet our requirements; benefits are what you would expect of a highly successful international organisation.

Please send full cv, including current salary, or write for an application form to Mike Short, Personnel Manager, Sigma Electronic Systems Limited, Sigma House, North Heath Lane, Horsham, West Sussex RH12 4UZ. Telephone: 0403 50445.

**SIGMEX**

## JOBS IN SALES AND MARKETING

## Technical Support Manager

State-of-the-art computer graphics systems  
Neg. salary  
+car

To qualify for this demanding new position, you must have successfully provided technical support in the computer industry for at least three years.

You will certainly need to have gained a thorough knowledge of operating systems, telecommunications and graphics. Aged around 30, your academic qualifications will include a degree in computer science or another numerate discipline.

Match our specifications and you could be the specialist we need to develop and manage a team of applications software specialists and technical support analysts.

You will be responsible to the Marketing Director of Sigmex - the wholly-owned sales and marketing subsidiary of Sigma Electronic Systems - for providing high-quality pre and post-sales technical support on the most advanced computer graphic display products currently being designed and produced in Europe.

The first-class remuneration package includes a substantial negotiable salary and will be attractive to high-quality candidates. Usual large-company benefits plus relocation assistance for the man or woman appointed.

Please send full cv, including current salary, or write for an application form to Mike Short, Personnel Manager, Sigma Electronic Systems Limited, Sigma House, North Heath Lane, Horsham, West Sussex RH12 4UZ. Telephone: 0403 50445.

## SENIOR SALES EXECUTIVES

### NOBODY DOES IT BETTER!

In fact, only one other manufacturer does it at all!

Our client manufactures a computer system that is so predominant and successful that to mention the particular market place would instantly reveal the product concerned. Yet it is only one of a range of minicomputers with a system price ranging from £25,000 to £500,000. The company has a considerable reputation for product excellence and its ability to sustain a growth rate of 30% per annum is in no small way due to the through-range competitiveness, as well as being one of the very few computer manufacturers able to provide commercial end industrial turnkey systems without necessarily having to rely on external systems houses.

Last year the company once again enjoyed considerable success with the top echelon of the sales force earning in excess of £50,000, due not only to effective selling, but also aided by a high level of pre- and post-sales support and low staff turnover - the hallmarks of a happy company!

This continuing expansion has consequently created a demand for additional sales people in

## LONDON & HOME COUNTIES

### MIDLANDS & NORTH

We are therefore seeking a couple of sales people from a hardware systems or computer services background, who really understand industrial and commercial applications. This is an opportunity that will particularly appeal to talented sales people who feel that their potential is not really being activated.

Our client offers a very attractive compensation plan with low sales targets and high earnings with a company car and guaranteed minimum first year earnings of around £20,000. Yet, this guarantee is not set against new business commission earnings!

Please contact Alasdair Scott, Lindsay Howie, or Mike Lintord, quoting reference SSR/G14

OPPORTUNITY IN DATA COMMUNICATIONS  
for experienced data communication engineer with commercial interest in becoming our

### U.K. SALES ENGINEER/ SALES MANAGER

The product we are going to sell is a new generation protocol converter and associated equipment, manufactured in Holland.

More than one thousand units were ordered in the first year of sales in Holland and Germany.

The man we are looking for must be familiar in great detail with asynchronous and synchronous protocols such as IBM BSC/SDLC, Burroughs poll/select, etc, and must be able to quickly familiarise himself with all aspects of (RS232 based) data communication procedures.

His commercial interest and management capabilities should enable him to simultaneously build up and take full responsibility for our U.K. operations. Drive and ambition are absolutely essential.

Having representative housing in the vicinity of London with a spare office room and telephone to start operations would be an asset.

Our proposal:

- A fixed salary plus percentage of the U.K. result
- Company car and expenses
- Reasonable refund for office space and telephone (if available)
- Two to three months' training in Holland (one-year trial period)

If you are interested, write and supply us with the following details:

- Education, experience, references, photo and personal data
- Location of your house and description of the office (if applicable)
- Requested salary and emoluments

INCA Amsterdam, 15, P.O.B. 211

## We need five easy Sales Executives for Scotland, North West Midlands and South East England

We're not saying it's an easy life, but selling Videcom products is different. You'll have an unbeatable range of business solutions with more to offer than the competition. The successful salesmen will have experience in large system sales to government, nationalised industries or large commercial accounts.

You will be totally responsible for sales and marketing development in your area. You may be given National Accounts, but should have an appetite for competitive sales.

We'll pay you well, provide a company car and offer the sort of fringe benefits you'd expect from an international company.

### We're Videcom

In the last years, we've designed, we've made a name for ourselves around the world by designing and manufacturing a wide range of terminal systems and micro computers.

We're British, we're successful, we're over 100 strong and growing fast.

If you think you're right for us, send us an application form and your CV to: Sales Manager

## RESEARCH

# Alvey starts the productivity flood

John Lamb describes one of Alvey's key areas - software engineering

THE first time most people in this business heard of the term software engineering was when it popped up as one of the four key areas of research in the Alvey programme. Since then, no self-respecting software company has been able to do without some mechanical aid to programming. But like so many things in computing, there is little that is new in the idea of software engineering. It is all about improving speed with which systems are produced and quality of the final product.

"As far as I'm concerned, software engineering means doing things properly"

velop software by the seat of our pants; software engineering is a recognition of the fact that a lot of the work involved in building software is repetitive.

"What one hopes is that the software industry will adopt a similar approach to civil engineering, in which there are well recognised methods of doing things, and so improve software productivity and quality."

There are certainly good reasons for improving the way in which software is produced. A survey of user expenditure carried out by Computer Weekly in conjunction with IDC Europe and published in September 1983, revealed that data processing staff accounted for 41% of the total spent on computing, amounting to about £2,641 million in 1982. This figure compares with the £2,020 million spent on hardware and £977 million that went towards buying software and computer services.

Robb Wilmot, managing director of ICL, claims that many users have a backlog of applications development that will take them three years to clear.

"Our group strategy is to offer high value solutions to high volume problems," he says. ICL, like many other firms, sees a ready market for any product which can either speed up the production of applications or allow end-users to adapt existing systems.

But what exactly is software engineering? According to Parker, it is a collection of methodologies and tools which help in the administration, production and testing of a software system.

Researchers have attempted to draw up procedures or methodologies which will guide designers and programmers in a formal way. Some of these procedures, like

structured programming, have been around for some time. Others, like the Vienna Definition Methodology are less well known.

"It's a matter of understanding how the software development process works, and producing formal rules," says Parker.

One of the latest concepts is that of prototyping. Prototyping is an attempt to make sure that whatever designed technique is used in building a system, the design process is flexible enough to take account of changes in the original problem. It involves building little models or incomplete versions of a system which end-users can experiment with.

"The benefits of some systems are inherently difficult to visualise," says James Johnson of Hallmark Cards Inc, who is an expert in data processing productivity.

"Assume, for example, that a manufacturing plant has a batch scheduling system and that a project team is asked to determine the feasibility of a real time system."

"In a feasibility study, it is almost impossible to define how a totally different method of operation will affect an entire plant. In this situation, the best way to understand the consequences is to observe a system in operation by implementing a working model."

Johnson points out that unlike existing methods of building a system, which attempt to produce a feasible system first time, prototyping is trial and error, with lessons learnt along the way being built into the final version.

Along with these new approaches to producing programs go new programming tools: fourth generation languages, data dictionaries, relational databases, application generators, development systems and so on.

In fact, there is such a plethora of systems that users are confused about how to employ them. One MIZ9 user reports that although he has a data dictionary system supplied with his machine, he has yet to use it because he cannot spare anyone for the time it would take to master it.

Another user, Rob Herson of Massey Ferguson, complains that there are not enough general purpose tools. "Not all these tools are what they are cracked up to be."

"Each one tends only to cover 20% of the ground you want to cover," Massey Ferguson is looking for a set of integrated productivity systems.

It has certainly taken time for many of these software tools to reach users. Mapper, Sperry's integrated database which enables end-users to construct their own small programs, has been kicking around for 10 years, but it is only in the last two years or so that it has found success.

Investment in productivity tools has been very low indeed. "If you compare the way programmers use source editors with the facilities available on a word processor, you wonder why those facilities aren't available to programmers," says Parker.

Part of the reason is undoubtedly the cost of such refinements. Mapper 10, for example, will set a user back £134,000, although price cuts are promised.

Sperry claims that Mapper 10, primarily an end-user tool, cuts development time by as much as one tenth for certain applications, compared with producing Cobol code. The screen formatter alone halves the time it takes to produce screens, says the company.

Despite such impressive statistics, software engineering is really

in its infancy. The Alvey Directorate believes there is a "critical need to move from the present ad hoc 'craft' practices of software production to a position which ensures that UK management turns increasingly to capital intensive methods of efficient software production and an engineered approach to reliability."

Over the next five years, the Alvey Directorate's software engineering programme will be spending some £38 million of government money, matched by £27 million from private sources. The aim of this effort is not only to develop tools and methods for producing software, but also to make sure that managers regard using them as normal practice.

The key development in the

programme will be the production of an integrated project support environment (IPSE) in which tools and methods exist for the specification, design, programming, building and testing of a system throughout its life cycle.

The Alvey Directorate also believes that there are enough similarities between the hardware and software design processes to be able to combine the two in something that is called the information systems factory.

There is little doubt that software engineering offers solutions to many of the deep rooted problems of software production. What must people involved in selling and buying productivity aids prefer not to talk about is their impact on programmers themselves.

WILMOT... Claims users have a backlog of applications development.

## The total network integration.

**NETIX**  
Part of our X-WIRE product range

Integration. Communication. Productivity. Your investments in data processing must be measured against these three basic criteria.

It makes no difference whether you are concerned with office automation, software development, data bank management or a combination of them.

NETIX provides total and automatic integration.

NETIX is a network operating system that provides real total integration of processor and storage capacity so that the user has at his disposal virtually one single machine.

NETIX, moreover, works automatically. Your computers and external memories can now be used at full capacity. NETIX grants shared access to all the peripherals, so needless duplication is eliminated.

NETIX optimizes your hardware investments.

**NETIX provides better communication.** All the users of all the machines can now communicate with each other and with all the apparatus more easily without being worried about protocols. Because, thanks to NETIX, you have virtually only one single machine. NETIX does automatically what one would have to do oneself with an ordinary installation.

**NETIX provides increases productivity.** Thanks to the total and automatic integration and the better communication, NETIX increased the productivity of UNIX and of the local area network.

**NETIX is completely compatible with UNIX.** Thanks to this complete compatibility, the users need no special training. NETIX is completely transparent. All UNIX applications, moreover, remain unchanged. NETIX safeguards your software investments.

Do you want to know more about NETIX? Fill in the coupon and send it to:

# The Transputer is at the crossroads

Martin Banks queries government support of the Inmos Transputer

THE English have the reputation of supporting financially technological white elephants while huying in from abroad lots of Trojan horses. It isn't always true, but the reputation tends to stick.

As a race, we also have the reputation of thinking up new ideas for technological Trojan horses, giving them away and then letting the recipients practise on us.

Again, it isn't always true, but it is a reputation that rings true. The latest vehicle for such speculation - white elephant or give-away Trojan horse - is the Transputer from Ian Barron's Inmos.

This insignificant looking device has been bedded in its silicon not only the active elements of an entirely different approach to designing computers, but also the seeds of classic English technical dilemma.

Should government departments provide the money to make such a device, given that its

It has the potential to make or break

support record has tended to be one of the key factors in creating the stated reputation, or should it let the company, and thus the product, go to the highest bidder out there in the commercial world.

The former route carries with it the potential political kudos that it would be the government which had the foresight and courage to grab a major opportunity to create the product of the future.

By the same token, it also carries the potential political minefield of leaving once again supported a profligate waste of national resources to no good purpose.

Not surprisingly, the second route carries with it the opposite potential. Sell to the highest bidder and the kudos of being a governmental sharp cookie is there to be had. There is, however, the risk that the buyer will sink just that bit more money into the product - money that had been asked for all along - make it work, and sell it back to us at vast profit.

Having been born of politics as much as any technical or financial consideration, it is probably only fair that Inmos should continue to be obliged to conduct its affairs in the glare of the political spotlight.

It could be a financial sponge for some time to come. The question, politically, is whether Inmos will become a financial black hole and, if not, when not.

There are reasonable technical arguments which indicate that the company will not in practice become a black hole. There are also reasonable marketing arguments. These are, however, set somewhat here out in the near future.

When it started out, Inmos got saddled with being the world progenitor of the wonder chip -

the 64K RAM - by an untutored national press. That same press then discovered that every other semiconductor manufacturing company in the world worth its diffusion furnaces was doing exactly the same thing. There was a quick volte face and the press called it all a con.

In practice, the 64K RAM was a part that, though it was hoped might make a profit in its own right, was something of a luss-leader to get a process going.

A semiconductor company needs a workforce and production plant that is working well if new circuits are to be produced, and easily categorised devices such as random access memories are helpful in that process.

In the end analysis however, Inmos is about the Transputer more than any other component it has so far designed or built. This device has the potential not only to make or break the company, it has the potential to make or break some big industry names.

Why this should be so is a function both of the device itself, and the direction in which computer technology per se is moving. It is possible to see that the two, the device and technology generally, are moving together with a certain degree of inevitability.

Taking the technology of computing first, there is the ever-present push from the users for more power, more speed, more flexibility.

One of the key requirements now is operational flexibility. Brute power is not forgotten, but today it must be flexible in its utilisation.

Because there is but a single processor inside the classic Von Neumann machine, it follows that only one task can be done at any time. Much effort has been put, therefore, into trying to develop bigger, faster and/or more powerful central processing engines with which to power computers.

No matter how powerful a single processor may be, however, it still ultimately restricts operations. Faster operation of the processor can give smaller periods in which to divide up a greater number of separate functions in a fantasy of apparent concurrent flexibility.

The way out of this particular bottleneck is, in practice, to find a new way to make the container. In terms of computer design, that means parallel processing, and the more parallel the better.

The Transputer combines a level of processing power that will be respectable in any form of computer together with a comprehensive range of internal and external communication capabilities.

All are tied together under the umbrella of a language and operating system that has been designed from the outset to work with truly concurrent processor operations.

Two devices are planned so far, though Inmos states that compatibility with future processors of virtually any type has been catered for. The first to appear will be the IMS T424, which will feature a 32-bit processor coupled to an on-board 4 Kbyte capacity of static random access memory and built-in support for multi-tasking operations, concurrency and communications. This is expected to be followed in 1985 by a 16-bit version, the IMS T222.

Fabricated using a combination of NMOS processing for the logic and CMOS for the memory, the device will hold the equivalent of 250,000 active components. With a cycle time of around 50 nanoseconds, the Transputer should be able to run at some five nips all by

BARRON... Has he a white elephant on his hands?

# How close to the PC must you get to make money?

You don't have to deal with IBM to cash in on the PC boom.

But you do need a computer that's operationally compatible.

A computer that allows you to benefit from all the software and peripherals that have been developed for use with the IBM PC and XT.

Happily, the new XTRA from STC fits the bill without matching the invoice.

The XTRA has been developed by ITT, the world leaders in IBM plus compatible workstations.

It's backed up with XtraCare servicing, full training programmes and all the sales support you'll need.

So, when it comes to profit, nothing comes close to the XTRA.

If you're interested in becoming an XTRA dealer and you'd like to hear all about STC's generous XtraCash package, phone us and ask for XTRA.

## XTRA

Personal Computer.

STC BUSINESS SYSTEMS LIMITED, BUSINESS MICROCOMPUTERS, MAIDSTONE ROAD, ROOTS CRAW, SIDCUP, KENT DA14 5HT. TELEPHONE 01-307778.

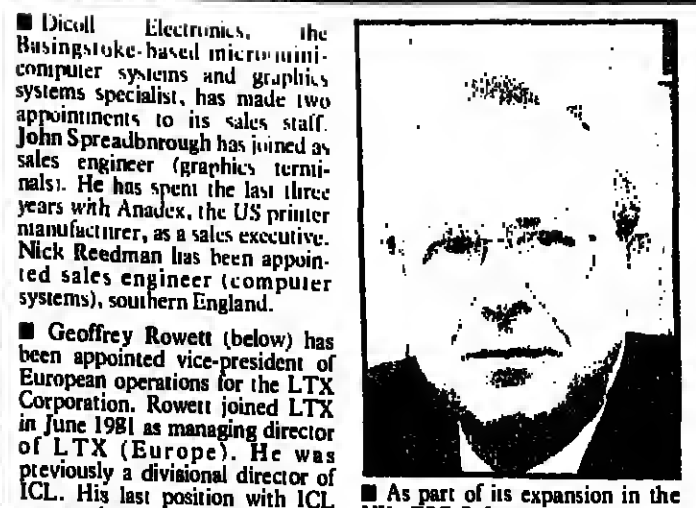

PEOPLE

Back in October Neil Hall (left) a senior support analyst at GEC Computers of Borehamwood, broke the world record for inshore circuit racing over the "flying kilometre" on Lake Windermere. Beating his 1982 record-breaking achievement, Hall averaged 70.95 mph on the required two laps in his Class T-1 craft, "GEC Computers". At this year's International Boat Show Hall received a certificate marking his feat from Richard Noble, the world land speed record holder.

Robert Harvey has been appointed senior sales consultant at CCS, a Cleckheaton, West Yorkshire, company offering services based on mainframe and microcomputers, particularly for stock and production control applications. Before joining CCS he was responsible for national computer hardware accounts as part of the Leeds-based NCR sales team; and was the Stockton branch manager of United Computing for five years.

Data General announces the election of Hisashi Tomino as a vice-president of the company. He is president of Data General's Japanese subsidiary, Nippon-Data General.

As part of its expansion in the UK, ESC Software has appointed Peter Fryle (above) as general manager. Previously he was European vice-president responsible for establishing UCC software products in Europe.

Bill Keen has moved from CPU where he was terminal sales manager, to become Southern area terminal sales manager with Mellordata. Tom Cook, appointed Mellordata's Southern area printer sales manager, was formerly with X. Data as a sales executive. Another newcomer to Mellordata is Vic Podmore also from CPU. He joins the company as a sales executive for the maintenance department.

Appointed systems consultant at MSA (Management Science America), providing customer support for General Ledger on existing and new accounts, Maurice Becher was most recently with the Clayton Dewandre group of engineering companies, where he was responsible for all computerised accounting systems. Prior to that he was at Coventry City Council, where he was responsible for developing and maintaining a variety of financial systems.

Bill Groves has joined Molecular Computer as financial controller, European operations. He will be responsible for the financial affairs of Molecular's European subsidiaries. Groves joins from Computervision, where he was European director of finance and administration.

Computer Technology has appointed Ian Stanley and Richard Griffiths as sales support executives for a new team formed to sell to strategic accounts. Stanley is support consultant in the team working mainly for nationalised industries and companies in the Financial Times top 100 companies. Before joining CTL, he worked for ICL for more than four years. Griffiths has been appointed support executive in the team involved primarily in pre-sales support roles. He was previously an application consultant for Tymshare UK.

David Parsonage has been appointed manager, UK field marketing operations, at Rediffusion Computers. He joined the company in 1977 as territory manager for the Western region and his last appointment was product marketing manager in 1982.

Peachtree has appointed Catherine Cornwell as product manager, responsible for office productivity products. She was previously senior technical adviser at Incometel/Loneywell.

The Gaviton Computer Corporation has appointed Collo Cook (above) as its European general manager. He was previously European marketing director of Storage Technology.

Alfred Mulenga, deputy DP manager of the Zambia State Insurance Company, receives his membership certificate of the Institute of Data Processing and Management from IDPM secretary-general, Ted Cliff. Mulenga spent 12 weeks in England during which he completed a Fellowship in Computer Management with Computech in London and was also awarded the NCC Certificate in Systems Analysis. Mulenga is also a founder member of the Zambia Computer Society which has a membership of about 1,000 people.

# All you need to know about synch and asynch operation

Fred Jennings, of software and systems house Data Logic, has prepared a series of reports on networks - called *Jensheets* - and the eighth of these is on communications protocols. The first two reports are on printing in line increments, of which this is the second.

WITH asynchronous operation each character sent/received over an asynchronous modem link at 300 bps - 1,200 bps or over an in-house link at 300 bps - 9,600 bps is 10 bits long:  
One start bit = 0  
Seven bits of ASCII code  
One parity bit (VRC)  
One stop bit = 1  
The start/stop bits which frame each asynchronous character use

used to start and stop the operation of the receiving device. The time between consecutive asynchronous characters can be any value between zero and the specified value of the inter-character time-out period.

Time-outs are an important aspect of line protocols. For example, one use of a time-out is to provide a software terminating condition to an unsuccessful or incomplete "Read" operation on a communications line.

With synchronous operation, each character sent/received over a synchronous link at 2,400 bps - 9,600 bps is normally eight bits long (seven bits ASCII plus parity bit or eight bits EBCDIC). The

time between consecutive synchronous characters sent as one transmission sequence must be zero.

When synchronous operation is used in conjunction with a control character orientated protocol then each transmitted character sequence (data block or response) must be headed by a number of SYN characters.

The number of SYN characters prefixing each sequence varies with different protocols and different types of communications link (switched line or leased line). A general rule is to assume a maximum of four SYN characters per transmitted character sequence.

SYN characters are used by the receiving device for character synchronisation purposes. For a receiving device to become character synchronised it must detect two consecutive SYN characters in the received serial character stream. Once synchronised, the remainder of the serial stream is divided into eight-bit quantities and handled as characters. Any SYN characters found after that are discarded.

SYN characters are often found within the data in a data block and these are normally the result of a SYN FILL operation by the transmitting device. SYN FILL is a facility normally built into the transmission hardware of a Synchronous Communications Interface (SCI). If a computer which is controlling its SCI should fail to provide the next character of a transmission sequence in good time, then the SCI will automatically transmit SYN characters to maintain character synchronisation until the next character is provided.

Manufacturers call this a computer UNDERRUN condition.

On the receiving side there is a reverse situation to this called a computer OVERRUN condition. This occurs when a computer cannot accept all the data in a received data sequence from its SCI because of receive buffer allocation problems. Most SCIs detect this OVERRUN condition and inform the computer via status information. In many cases the recovery from an OVERRUN condition is to request the data again by

sending a NAK.

Excessive UNDERRUN and OVERRUN conditions normally point to an overloaded computer system or poor system design.

The main reason for introducing the subject of asynchronous and synchronous operation is to explain that some control character orientated protocols operate equally well with asynchronous or synchronous operation using the same character sequences.

For such a protocol the only difference apart from the number of bits per serial character (10 or eight) is that with synchronous operation each transmitted sequence is preceded by SYN characters.

For bit-orientated synchronous protocols (eg HDLC, SDLC) the beginning and end of each transmitted sequence (frame) are

marked by one eight-bit FLAG character (binary 01111100). SYN characters and Control characters are not used and data transmission control functions are provided by a Control field which is the second character following the leading FLAG in each frame.

A half-duplex contention protocol is generally used on a point to point synchronous link to support the following device configurations: computer to computer, computer to remote job entry (RJE) terminal, RJE terminal to RJE terminal.

With a Poll-Select protocol the communications link is always active due to background polling, but with a contention protocol the link is active only when data is being transferred.

When a link which is operating a contention protocol becomes idle

then a communicating device on either end of the link can make a "bid" to send data.

A "bid" on a synchronous link is normally a five character sequence (SYN, SYN, SYN, SYN, ENQ). After sending a "bid" a device waits for an acknowledgment (SYN, SYN, SYN, SYN, ACK) from the other end which indicates that the "bid" is successful and that the device can proceed to send its data.

If a device does not receive an acknowledgment to its "bid" after a given time-out period then the device sends its "bid" again. If two devices on the same link make a simultaneous "bid" then each device will ignore the other's "bid" because with a half-duplex protocol a device is either sending or receiving.

To overcome this problem, de-

vices on each end of a communications link have different time-out periods, so that in the case of simultaneous "bidding" one device will eventually win.

A device which has its "bid" acknowledged will start to transmit its data in blocks. Each individual block will be acknowledged (ACKed) or NAKed by the receiving device, and NAKed blocks will be retransmitted.

Depending on the protocol an ACK can be a single ASCII ACK control character.

The control character used to terminate the data section of a transmitted block is normally an ETB except for the final data block where an EOT is normally used. When a sending device has sent all of its data blocks then it sends an "End of Transmission" sequence (SYN, SYN, SYN, SYN, EOT).

### Personal touch in typing centre

THE new Panorama Personal Typing Centre's basic system consists of an 8088 processor, 14-inch screen, separate keyboard, integral software, one 5 1/4-inch single sided double density floppy disc drive and a 20 characters per second daisywheel printer.

The 14-inch adjustable screen shows 25 lines of 80 characters. The screen guides the operator with messages, and the moveable keyboard contains a row of labelled function keys with commands like BOLD and UNDERLINE thus avoiding complicated code keys and sequences that can make some electronic typewriters difficult to use.

The Centre combines software and HELP and UNDO mechanisms. Pressing the HELP key provides additional information on how to use the part of the centre you are working with. UNDO allows you to correct

Eric Winkler, chairman of Panorama, with the new Personal Typing Centre.

your corrections - by pressing the UNDO key the typist can change back the last change made and this process can be continued right back in the beginning if required. Development was based on producing a printer that was mod-

ular and robust in design, making it easy to manufacture and maintain. A quality assurance program is included in the manufacturing process and stringent environmental and reliability tests are carried out to ensure that high

levels of printer quality are maintained. Panorama Office Systems (CW), Silbury Court, 352 Silbury Boulevard, Central Milton Keynes MK9 2HJ. Tel: (0908) 660444.

The dual screen word processor improves communications.

## Catering for lazy executives

LANIER Business Products, the US-based manufacturer of electronic office equipment, has launched a new word processor that comes with two screens, two keyboards, a 10 Mbyte Winchester disc and a daisywheel printer, price £7,250.

Called the EZ-2, the system has been designed so that an executive and his secretary can both use the same machine to enter text, make amendments, check spelling and so on without having to move from their respective desks.

In effect, the EZ-2 is a two screen multi-user/multi-tasking microcomputer system complete

with hard-disc storage and a letter quality printer.

The EZ-2 has 256K of memory, and a full range of software, including word processing, "Data-manager", EZ-Spell, "EZ-Task" and Greek word processing for academic/scientific text and equations.

A feature of the system is that one screen can be used for word processing, while the other can run any piece of CP/M compatible software.

Lanier Business Products (CW), Reunell House, 40A Mill Place, Kingstons-upon-Thames, Surrey. Tel: 01-549 8741.

## Screen star.

The TeleVideo 924

In a family of great performers the TeleVideo 924 is truly a star performer, offering the power and versatility you would expect from the world's leading independent manufacturer of video display terminals.

Ergonomically designed, to both tilt and swivel, the non-glare high contrast CRT combines beauty with brains. Packed with features which include 16 non-volatile programmable function keys, 64 special graphics characters, 32 non-embedded visual attribute combinations, programmable delimiters, buffered printer port, reconfigurable keyboard.

Not that the 924 is one night wonder, it will go on performing with unmatched reliability, an area in which its vertically mounted, convection-cooled logic board is setting new standards.

If you would like to see the TeleVideo 924 perform (or would like a more detailed biography) make a reservation with the able bodied people on the right.

معلومات

## Supporting cast.

As a supporting cast we will not be as well known to you as the star performer on the left.

In bettering the service that you can offer your customers though, we are just as essential.

Because a professional back-up service can mean the difference between you giving a customer the service he wants or giving him problems he can do without.

We'll give you, for example, a firm and competitive price.

We'll give you a definite delivery date (as a promise, not a guess) and we'll provide all the advice you need to make the most of every machine you sell.

From a printer to a touch sensitive screen and beyond. And we guarantee our concern won't stop with the delivery van.

Mellordata's Field Engineering Group has been on the road for ten years keeping computers computing.

It all adds up to a service which has been greeted by warm applause wherever we have performed.

As with any performance though, it's always best to be your own judge.

Authorised distributors for TeleVideo and Mannesmann Tally. Exclusive distributor for Datamedia and Carroll Touch Technology. Authorised main dealer for Epson.

NEW TECHNOLOGY IN EXPERIENCED HANDS.

## The Data PABX that grows with you

### MINI-PACX IV

- data PABX for up to 48 terminals/32 ports
- modular for easy system expansion to 12,000 attached devices
- handles 9600 bps async, 19.2 Kbps sync data
- unlimited queuing for computer ports
- system monitoring statistics for network management
- provides system security features

gandalf™

GANDALF DIGITAL COMMUNICATIONS LIMITED  
WOODSTON, WARRINGTON, CHESHIRE. (0925) 818484

THE Rental Research 2670 laser printer has just been launched on the market.

It runs at a claimed speed of up to 28 pages per minute. It produces letter quality print with a standard dot density of 90,000 dots per sq. in.

With 1,300 fonts available, the 2670 can be adapted to suit the requirements of the individual user. Once installed, it can be easily upgraded if these requirements should change. Users have the facility to intermix fonts and print graphics, logos and signatures.

Rental Research (CW), 59-63 Worship Street, London EC2A 2DU. Tel: 01-247 5901.

## PRODUCTS

## Package for small retailer

WITH the increase in power of the microcomputer, DSI Retail has put together a microcomputer package called Microempac, designed for small non-food chains of up to 10 outlets or large multi-department single units, such as sports shops.

The system is written for the Sirius 1 computer, with 10 million characters of hard disc storage. The system is modular, and covers stock control and merchandising, purchase order management, ticket printing and reading.

A feature of the system is that stock is controlled down to branch, department, style, colour and size.

It'll Collier, general manager of DSI Retail, explains: "It is sometimes argued that the small retailer does not want control down to this level. We don't agree - if it's the wrong colour or the wrong size, then it just won't sell."

As well as current stocks, information is held on sales in each of the last five weeks and for year to date.

Stocktaking with a laser gun used in conjunction with bar-coded garment tickets.

The files are open to screen enquiry at any time and there are periodic reports to help decisions on stock replenishment.

DSI Retail (CW), Abelson House, Coventry Road, Sheldoon, Birmingham B26 3PS. Tel: 021-742 3241.

## Foundry system gives better control

ADS COMPUTERS is to launch FO-COM, a foundry computer system designed to provide management of small and medium sized foundries with better control over operation and administration. In essence, the system will halve clerical time and increase productivity by 10%, says ADS.

FO-COM has been designed to minimise overstocking, supply and production bottlenecks, reduce paper work, administration and clerical costs, provide accurate costing, improve cash flow and increase productivity.

This is achieved by the control which FO-COM maintains over casting records, order processing, costing and pricing, acknowledgements, delivery schedules, shop loading, production control, invoicing, ledgers, credit control and payroll.

A suite of six major integrated programs contained within FO-COM include foundry operations,

master base, order processing, production control, accounts and payroll. Additional facilities include: weight estimating, quotations, on-line budgeting and word processing.

FO-COM's production control program allows job costing and future pricing to be analysed by the production of accurate information on productivity, scrap rates, output and cast weights, says ADS.

Over 100 sales and 100 debtors can be processed in one day by FO-COM's accounts facility. A suite of programs incorporates sales ledger, statements, aged debtor lists, purchase ledgers, nominal ledgers, sales analysis and numerous management financial reports.

ADS Computers (CW), Millan House, 172 Bath Road, Slough, Berks SL1 3XE. Tel: (0753) 821321.

Marconi's tracker ball.

## Tracker ball controllers

A NEW range of tracker ball controllers for mini and microcomputer systems and low-cost work stations has been introduced by Marconi Electronics Devices.

Known as the RB3, this tracker ball controller uses a 3in diameter ball supported in a low torque mechanism to translate an operator's two-dimensional hand movement into exactly equivalent electronic signals for precise positional control.

Marconi Electronic Devices (CW), Doddington Road, Lincoln LN6 0LF. Tel: (0522) 688121.

## PRODUCTS

## Back-up for 20 Mbyte Winchester in 4 minutes

MICRO Memory Systems has launched in the UK a range of 94in tape streamers capable of backing up a 20 Mbyte Winchester in four minutes, or a 45Mbyte disc in nine minutes.

Designed for use in multi-user, multi-tasking computer systems and networks, the Waugtek Series 5000 tape streamers fit into the same physical space as a half-high 5 1/4in floppy or hard disc.

The intelligent formatter is also packaged in a half-high module, enabling the complete back-up system - tape drive and formatter - to be fitted into the same space as a full height 5 1/4in disc drive.

Data capacity is 20 or 45 Mbytes, and data transfer rate is 90 Kbytes per second at a tape speed of 90 inches per second. They use a serpentine recording form, with nine or four tracks, at a recording density of 8000 bits/inch.

Micro Memory Systems (CW), Kennel House, London Road, Newbury, Berks RG13 1JN. Tel: (0635) 46405.

The Waugtek Series 5000 1/2in tape streamers, now available in the UK from Micro Memory Systems.

## Data acquisition board for IBM Personal

DATA Translation has announced a data acquisition and control board for the IBM Personal Computer. Available for £295 (OEM quantities), the single board DT2808 includes analogue and digital inputs and outputs, an on-board programmable clock, and an on-board microprocessor.

Providing 16 channels of A/D with 10-bit resolution, two channels of D/A with 8-bit resolution, and 16 lines of digital I/O, the DT2808 is intended for applications ranging from industrial control, data logging, product testing and quality assurance to home energy management and security systems.

The DT2808 is part of Data Translation's seven-member family of IBM-PC compatible data acquisition hardware and software products. All of these are compatible with the IBM-PC, IBM XT, Compaq Portable, Eagle PC, Columbia Data Systems, and the

DEC Rainbow 100. The DT2808 design includes an on-board microprocessor which acts as the interface between the DT2808 and the host personal computer, controls all on-board analogue and digital I/O operations, does self-tests.

Alternatively, the DT2808 may be programmed using PCLAB, Data Translation's library of Basic-callable subroutines. PCLAB is a real time software package supporting all the analogue I/O, digital I/O, and clock functions of the data acquisition boards.

Also available with the DT2808 is the DT707 screw terminal panel and DT752 signal conditioning/screw terminal panel.

The DT707 is priced at £149 and the DT752 at £175 in single quantities. PCLAB is £495. Data Translation (CW), 430 Bath Road, Slough, Berks. SL1 6BB. Tel: (06286) 849862.

## Package turns PC into design station

DICOMED (UK) has announced a package of software and peripheral hardware which it says will turn an IBM Personal Computer into a design station which will produce high resolution business graphics.

Called the Dicomed Micro 2, the system calls for no extensive knowledge of either computers or artwork techniques. With a minimum of training the operator can create graphics for a wide range of business and presentation uses. Pie charts, bar charts, column charts, line graphics, organisation charts and text are within the scope of the system.

The design created on the IBM-PC is transmitted - via a telephone modem or on disc - to a Dicomed Colour Recorder for production of the final output. This is most commonly a 35mm slide, but can also be in the form of an

overhead transparency. In addition to producing slides with high colour saturation and a resolution of 8,000 lines, says Dicomed, this process cuts costs by a good deal more than half when compared with conventional slide production methods. Origination costs are also lower as no typesetting, masking or keylining is required.

The Dicomed Micro 2 package consists of the software and a graphics tablet. Text is entered on the keyboard and displayed on the screen. There are seven sizes of characters in Helvetica. Charts can be prepared automatically with the operator requesting the type required and entering the numeric data.

Dicomed UK (CW), Coworth Park House, Coworth Park, Ascot, Berks SL5 7SF. Tel: (0990) 27312.

The IBM-PC with the Dicomed graphics tablet.

## IBM-type terminals

ALTERNATIVES to the IBM 3278 and 5251 terminals are being introduced by CPU Peripherals in the shape of Esprit Executive 10/78 and 10/51. Both terminals have IBM layout keyboards and in conjunction with an appropriate protocol converter, will perform all IBM 3278/5251 applications with no software changes.

One-off end user recommended prices are £1,046 for Executive 10/78 (IBM 3278) and £1,075 for Executive 10/51 (IBM 5251).

CPU Peripherals (CW), Rudd Industrial Estate, Goyett Avenue, Shepperton TW17 8AQ.

## Microfloppy follow on

SHUGART has introduced a double-sided microfloppy disc drive capable of storing one megabyte of information on the industry-standard 3 1/2in media. The Shugart 350 is a follow on to the company's first microfloppy drive, the 300.

Designed to operate with the ANSI working standard 3 1/2in hard-shell cartridge media format the Shugart 350 provides six-millisecond track-to-track access time and 80 tracks per side.

Shugart Corporation (CW), PO Box 57, Woking, Surrey GU21 1AJ.

brother

Dept. B Jones & Brother, Office Equipment Division, Shepley Street, Guide Bridge, Aylesham, Kent ME14 5JL. Tel: 061-330 6531 (10 lines), 061-330 0116 (5 lines), 061-330 3036 (4 lines). Telex: 649092. BROTHER INDUSTRIES LIMITED, NAGOYA, JAPAN.

All you require is a little peace and quiet. By the time you've finished reading, you'll be convinced that the HR-15, from Brother International Europe Limited, is quite simply an outstanding printer at an exceptional price.

That's not to say it's basic. Far from it.

EVERYTHING YOU WANT FROM A PRINTER.

Daisy wheel, letter quality, and bidirectional printing at a speed of 13 cps (Shannon text), 18 cps maximum, is the platform upon which Brother have developed the HR-15. Making it an attractive proposition to business people and hobbyists alike. Take the daisy wheel itself.

Available in a host of typelanes, it comes encased in a protective varnished.

As much to guard it from handling and probing its usefulness as to save you from dirtying your fingers.

A small point, perhaps, but it's indicative of just how far Brother go into the planning of their machines. Simple but ingenious ideas like a

ribbon cassette that snaps into place, plus a separate real ribbon.

Ingenuity that extends as far as a family of compatible accessories.

More specifically, the TF-50 tractor feeder for continuous paper feed.

The CF-500 of short order to word processing and letter use. It can automatically feed 150 sheets of A4 size paper, and the movable roller guide allows you to slip in a different sized sheet without removing the unit.

Finally, an invaluable attachment for all small businesses, the KB-50 keyboard.

It transforms the HR-15 into a sophisticated electronic typewriter.

Allowing the HR-15 to be of more use around

the office than a lot of its competitors in the printer market. And, as with all of the Brother accessories, the price adds to the HR-15's economic performance.

SOPHISTICATED OPERATIONS AT YOUR FINGERTIPS.

As the functions, by necessity, become more complex, Brother have kept their operation as simple as possible.

At the touch of a button, the HR-15 can be set to continuously print whatever is stored in its 3K buffer. Making form letters and document duplicates no problem at all. It also leaves your computer free for other operations. To clear the buffer for new text, all you do is re-press the same button.

The HR-15 boasts proportional spacing which eliminates unsightly gaps between characters, giving a uniform appearance and highly professional finish.

For those finishing touches that give your print-out something extra, the HR-15 can print in two colours, shadow print and underline.

All carried out automatically during the print run, as instructed by your program.

Should that program be of a scientific or unusual nature, the HR-15 can take it in its stride. Fractions, exponential or any other characters that require specialised treatment are dealt with by its super and sub script facility.

There's even an impact control to vary the character arm pressure on the paper, which is ideal for making carbon copies.

TAKING THE WORRY OUT OF INTERFACE.

An impressive array of capabilities which is equalled by interface and DIP switch options, thereby extending the versatility of its operation. At no extra cost, the HR-15 offers a choice of either a Centronics parallel or an RS-232C interface and it's compatible with almost all the micro computers currently available.

There you have it, the Brother HR-15, its facilities, its simple plug-in accessories and its interface connections.

And for a price that gives you a lot more than you probably bargained for.

You don't need a computer to tell you which printer to buy.

## NCR system aimed at small hotels

THE NCR 2160 Lodging System is a guest accounting and food service system for small to medium-sized hotels and motels.

It handles accounting for advance deposits, registration, charge posting from the front desk or separate service locations, package deals, checkout, and city ledger.

Food service features include timekeeping and inventory options, wellproof micromotion keyboard and multiple pre-set price keys.

Features of the system include an optional form number reader which automatically recalls previous balance information from memory. Personnel therefore do not need to enter manually numeric data such as room number and previous balance.

A memo key allows the operator to type in information after an entry on an account.

A variety of front desk, restaurant, bar and other revenue centre management reports is available.

A typical configuration, including a processor, five 2160 terminals, and a variety of printers sells for about £25,000.

The system will be available for delivery within two to three months.

NCR (CW), 206 Marylebone Road, London NW1 6LY. Tel: 01-388 8248.

The 2160 Lodging System.

The Chubb magnetic media protection cabinet.

## Protection for floppies

FLOPPY discs are easily damaged. Manufacturers recommend that they are not exposed to temperatures above 52°C or humidities above 85%. Even a hot mug of coffee if spilt or stood on a disc represents a hazard and a smouldering cigarette or fire would destroy discs in minutes unless protected.

A new fire protection cabinet from Chubb provides protection at workstations for floppy discs, data

cartridges, tape reels, hard disc cartridges, micro film and micro fiche, against fire, dust, magnetic fields from office equipment, humidity, unauthorised access, pilferage and accidental or malicious damage.

The cabinet has been awarded the VDMA-S60DIS label for floppy disc protection following independent fire tests.

Chubb & Son Lock & Safe Co (CW), 51 Whitfield Street, London W1P 6AA. Tel: 01-637 2377.

## MIDDLE EAST IBM & DIGITAL Specialists

Earning package  
**£34,000-£41,000 p.a. Tax Free**

### Analyst/Programmers

PL1, IMS experience ideally with ADF

### Systems/Programmers

4 years + supporting MVS/JES2, and/or IMS/VS, TSO Internals, VTAM, SNA design and MVS structure and design.

### Business Analysts

10 years + D.P. assisting in the design, development and implementation of a major Human Resources programme (Personnel, Payroll etc.). To develop detailed user requirements, conversion plans and implementation.

### Systems Analysts/Scientific/Analyst Programmers

Candidates should either have a B.Sc Engineering qualification with a minimum of 4 years D.P. experience or 7 years related job experience with 2 years as an Analyst.

Experience in PL1 programming is essential with sound knowledge of some of the following skills:  
SPF, OS, JCL, TSO, Project Development Methodology, Parvalet Program Management, IBM Utilities, Flow Charting - Data Flow Diagrams, ISPF Dialogue Manager, Structured Programming Techniques, Documentation Writing.

The ability to liaise with users to define maintenance and development projects through to implementation with minimal supervision is essential.

### Systems Analysts - Training

Training in PL1, Fortran, TSO/SPF CMS in an IBM environment operating under MVS/JES2 and/or VM.

In addition a sound knowledge of the oil industry and the ability to communicate effectively is essential.

### Systems Analysts

Candidates should either be degree qualified with 5 years IBM D.P. experience or a minimum of 8 years IBM D.P. experience. A sound knowledge of MVS, VM, SAS, TSO/SPF, PL1 and/or Fortran is desirable. Previous experience either as an Instructor or working as a member of a project team is an advantage.

### Senior DIGITAL Technicians

B.Sc in Electronics/Computer Sciences with 5 years + in a maintenance or Field Service environment. Experience in maintenance of micro and mini computer systems. In particular, DEC VAX 11/780, PDP 11/34, AUISCOM and CALCOMP 925 controllers in association with BENSON CALCOMP APLICON and graphic plotters.

These contracts represent a once in a life time opportunity to make your future financially secure and they include:

- \* Leave 16 days every 16 weeks
- \* One year renewable contracts
- \* 9 public holidays
- \* Medical/Dental cover
- \* Camp facilities: Tennis court, Racketball court, Swimming pool, leisure vehicles.

So don't delay - call Knight on 01-491 4706 quoting ref NW991. Alternatively complete and return the attached coupon.

## Real-Time PDP II Programmers

Central London  
(Overseas Travel)

£12,000 +  
Generous Bonuses

Our client is a British privately owned company and a world leader in its field. The company develops and sells a sophisticated communications and word processing turnkey system used in large real-time applications as well as the electronic darkroom system.

To continue their policy of expansion our client wishes to increase their development potential by 2 or 3 Programmers.

Applicants should be able to demonstrate two years practical experience in the following:

- \* Real-time applications
- \* PDP II experience
- \* RTII, RSIM and Macro 11 Assembler

It will be an added advantage to have experience in VAX and FORTRAN and a knowledge of Telecommunications.

These positions will involve working on overseas assignments for periods of three to six weeks; and therefore fluency in a foreign language would be desirable. Successful candidates will be offered competitive salary levels plus generous financial incentive schemes.

Find out more - contact Knight on 01-491 4706 quoting ref YY407

## Chief Programmer and Senior Programmer

Surrey (Nr Croydon)

Negotiable to £15,000  
+ Excellent Benefits

Rank Hotels and Holidays, which includes Burt's and Leisure Holidays has an annual turnover in excess of £225 million employing some 4,500 staff.

The computer services department is currently developing a major real-time Holiday Reservation system with other related systems to follow. A DEC VAX 11/750 handles the development centrally and this is linked to a network of 11/750's distributed throughout the UK. The latest screen handling, DBMS, and Networking products are being used and Videotex software will be incorporated in the near future.

Responsibilities will include the development of new programs and the support of existing operational systems. An ability to work to time and cost schedules and effectively manage

people are essential qualities required of candidates plus experience as follows:  
Chief Programmer - 4 years + COBOL programming with a working knowledge of VAX/VMS, DBMS, IECNCT and/or Videotex is desirable.

Senior Programmer - 3 years + COBOL programming. A working knowledge of VAX/VMS and DBMS is desirable. Successful candidates will be rewarded with a generous competitive salary plus benefits including free Medical Insurance and Life Assurance, holiday discounts, subsidised restaurant and many more.

Find out more - contact Knight on 01-491 4706 quoting ref: GK626.

## Customer Support/Accounts Person

(Micro computer based systems)

Central London

£8,000

Cambridge Data Limited specialises in the supply of turnkey systems for the clothing and allied industries.

Their product range incorporates a wide variety of commercial applications e.g. Factory Production Control, Accounts, Stock Control and Order Processing, for CP/M based multi-users networks using a wide range of micro computers.

To continue their policy of expansion, Cambridge Data Limited is currently seeking a person to perform customer support and training, and manage the internal computerised Accounting system.

Candidates should either be partly qualified in Accountancy or have received formal or practical accounts training with a knowledge of computerised systems. In addition, the ability to communicate effectively at all levels is essential.

Find out more - contact Knight on 01-491 4706 quoting ref: YY406.

## Analysts and Designers Realise Your Ambitions . . .

As a Company we are leaders in the field of providing finance for the domestic and business markets. We enjoy the stability and security afforded by being a subsidiary of one of the UK's top clearing banks. Our commitment to the use of data processing has never been stronger. We make full use of IBM, and TANDEM equipment, with delivery in mid-1984 of an IBM 3083 to replace an IBM 4341.

We are now at the early stages of a five year systems development programme, incorporating online and database techniques. Our core system for business is currently being redeveloped, and once implemented, a substantial new systems development programme will get underway. To play a major role and ensure the success of this programme we need to recruit **Systems Analysts and Systems Designers**.

As an Analyst you will have a working knowledge of financial systems, although, of particular importance is your ability to work closely and effectively with user management throughout our Organisation - 'somebody who can advise users what is best for them'. As a Designer we would be very interested if you have IBM database design experience, nonetheless, full training will be provided to ensure that you make the most of your ability.

Working in a project team environment you will have every opportunity for career progression to management levels. If your interests as a Designer are in more technical areas, then we have the scope for you to specialise.

Our location in Covent Garden makes for easy access from virtually all Main Line railway stations, and the Underground. Company benefits include Non Contributory Pension Scheme, Health Care Plan, Profit Sharing, Subsidised Staff Restaurant, Generous Holiday Allowance, and after a qualifying period, an Interest Free Season Ticket Loan and Subsidised Mortgage.

To find out how to achieve your ambitions by joining our Company telephone our Advising Consultant, **Stephen Brown**, on the SCR London office telephone number below or **04024 72160** evenings and weekends. Alternatively submit a detailed C.V. to him at the SCR London office.

## Programming Professionals

### Cobol

### Mini-Computer Environment

### North West

Salary to £12,000  
+ Relocation

Our client is a highly successful, profitable company operating at the forefront of technology. Located in an attractive area of Cheshire, it is well serviced with motorway, road and rail links. Following a major review of its requirements, the company has identified the following career opportunities:-

### Team Leader

Circa £12,000

The successful candidate will lead a team of around six programmers working on a variety of management information systems, primarily developed on a powerful mini-computer. It is likely that he/she will have at least five years programming experience including some staff supervision. The person appointed will be responsible for imposing and maintaining programming standards within the team, and knowledge of structured programming techniques would be of particular interest.

### Senior Programmers

Salary between £9,600 and £11,300

These positions represent excellent opportunities to join small project teams engaged on a range of commercial systems. The company offer a stimulating working environment developing systems on-line and using databases.

Candidates for all positions should be able to demonstrate sound Cobol skills, gained on any equipment, either mini or mainframe, preferably in an on-line environment using database techniques. Full training will be provided to familiarize the successful candidates with hardware and software.

Career prospects and conditions of employment are excellent, including flexible, 37 hour week, over six weeks holidays and a relocation package where appropriate.

Specialists since 1971 in UK and International computer & technical appointments

## Logica B.V. - TANDEM based Manufacturing/Communications Systems

### Holland - Rotterdam based Full Relocation Assistance

Logica B.V. has recently celebrated ten years of successful business growth in the Netherlands, and is now recognised as the leading Systems House/Consultancy specialising in Real-Time Systems Engineering.

Logica B.V. employs around 120 staff of both Dutch and English nationality. Major development and consultancy projects are currently being carried out in many areas of Commerce and Industry.

Logica B.V. now has vacancies for staff to work on the Definition, Design and Development of innovative Banking Systems. These Systems will use advanced Communications concepts and will run on TANDEM 'non-stop' hardware.

#### Senior Consultant/Project Engineer

Candidates must have significant development experience, where a large proportion of this must have included TANDEM based applications in a Communications environment.

Experience in leading teams of Analysts, Designers and Programmers within such projects is essential, and an understanding of Dutch and International Banking Systems and practice would be a definite advantage.

Logica B.V. employs staff of the highest calibre, who work closely with Client staff during the course of the projects; candidates should therefore possess good academic qualifications and powers of communication.

The Netherlands is a stable and prosperous country, and is regarded as the commercial gateway to Europe. It is roughly the same size as Wales, and English is widely spoken. The rest of Europe is easily accessible by road, rail and air, and Holland itself offers the expatriate a standard of living and social facilities comparable to those enjoyed in the United Kingdom.

Logica B.V. will offer successful candidates an attractive remuneration package, plus total relocation cost reimbursement. Shortlisted candidates will be able to travel to Rotterdam for a day to visit Logica's Head Office to meet staff and to discuss career opportunities in more detail. Initial interviews will be carried out by SCR in London, Birmingham and Manchester.

Applicants are asked to register their interest with our London Office, or to call Rex Ashcroft directly during working hours on Amsterdam 76 09 47, or Amsterdam 73 78 22 during the evening or over weekends, or to send a copy of a detailed personal CV. to our London address quoting reference RAL/1.

## We're the biggest because we employ the best...

### We now need:

- MVS Systems Programmers
- IMS Specialists
- VSE Systems Programmers
- Applications Programmers

### The Company

Synapse Computer Services is the UK's leading independent IBM systems software support company. From a fledgling start in 1980, Synapse today has nearly 150 clients, among whom are some of the biggest IBM users in the U.K. We are successful because we give our clients the best service using the best people.

Synapse employs a national team of experienced systems programmers. In their specialities they provide technical support and consultancy in the fullest sense to our clients.

Our growth is creating opportunities for people experienced in MVS, IMS, VSE and applications.

### The Jobs

The jobs we are offering are varied, interesting and responsible.

**MVS Systems Programmers** should have a minimum of three years' experience in installing, tuning and debugging MVS. Knowledge of associated products will be an advantage. With company benefits, the minimum remuneration package averages £19,000 plus company car.

**IMS Specialists** should have installed and debugged IMS and designed databases. With company benefits, the minimum remuneration package averages £19,000 plus company car.

**VSE Systems Programmers** should have a minimum of two years' experience with VSE and associated products. With company benefits, the minimum remuneration packages averages £18,000 plus company car.

**Application Programmers** with COBOL, CICS and DL/I experience are required. With company benefits, the minimum remuneration package will be £9,000.

Company benefits include BUPA, health insurance and individualised training programmes for skills and career development.

### The Next Step

If you are interested, please write with career details or telephone Bill Williams for an application form etc:-  
Synapse Computer Services Ltd.,  
120A High Street,  
Chesham, Bucks. HP5 1EB  
(0494) 775532

### The IBM SYSTEM 34/36/38 Recruitment Specialists

**MARCH COMPUTER SYSTEMS LTD.** one of the UK's leading software houses specializing in IBM Systems 34/36/38 now have the following openings:

**RPG III Project Leaders  
Analyst/Programmers**

**RPG II Project Leaders  
Analyst/Programmers**

Join us to work in our unique environment developing systems on our In-House Systems 36/38 for blue-chip clients in the UK and abroad:

**Bespoke Systems**

**Multicurrency Distribution Package**

**MRP-II Software (Data-3 Package)**

To apply please call **Richard Milsum** on 01-354 1055 during office hours or on 01-958 2553 during evenings and weekends. All response will be strictly confidential.

## CONTRACTORS

RTL are seeking experienced personnel in the following categories

**VME Cobol - Programmers/  
Team Leaders**

**TPMS & IDMS - Designers**

**System 25 - Specialists**

**RATES FROM £350 - £750  
PER WEEK**

We offer fixed term contracts of varying duration involving challenging projects in several locations. Every assistance is offered to 'first time' contractors in setting up their operation and administering business affairs.

For further details of these contracts please contact John Read on 0734-788213 or send full CV to:

(7327)

**RTL Software Services Limited**  
Wingmore Lodge, 2 Rose Street, Wokingham,  
Berkshire RG11 1XU. 0734 788213

### TECHNICAL SUPPORT ROLE • To £9,500 + Car + Bonus • West of London

Recognising certain characteristics is something our client, OCR Scotland knows all about. They are market leaders in the development and supply of sophisticated Optical Recognition Equipment which has placed them at the forefront of the UK, European and US markets. Their diverse products range from Hand Held OCR readers to 'State of the Art' full document image capture equipment. The applications utilising these products are equally wide ranging.

The Company is constantly improving the performance of its products and it is within the Software area that you will play an important role in a technical support capacity. This is a responsible and varied position within a team involved in both the development of customised software and also the demonstration and implementation of the company's products. The technical environment includes DEC, IBM and Perkin-Elmer hardware and a diverse range of mini/micro systems supporting the products.

You'll be working with a variety of high and low level languages, with the latest developments taking place in 'C' and MS-DOS.

Ideally you should have experience of around 2 years programming in a mini/micro environment. Applications from candidates with the ambition to move into this field are also invited. If you have the technical ability and the confidence to communicate effectively, this is a company that will maximise your talents and stimulate you both personally and professionally.

And should you need further convincing, the rewards include a salary of up to £9.5K + car + bonus, private health scheme, pension scheme and life assurance.

If you can identify with such technical scope and career prospects call Hugh Macer up to 7pm Weekdays on 01-734 9723. Evenings and weekends 01-881 2788.

## Programmer/Analysts • An exercise in character recognition

**CTR**

Computer Technology Recruitment Limited Triumph House, 189 Regent Street, London W1R 7WD.

# Systems Analyst

## Develop a large company's new business systems from scratch

Middx/Herts border

c £15,500

Our client is a world leader in the design and manufacture of advanced electronic systems with an exceptional reputation worldwide. They are now establishing a new information systems function including the installation of new hardware to support a demanding systems development plan.

They are now looking for someone to define the detailed business systems needs for each sector of the company and build and lead teams to implement them. You will report directly to the Information Systems Manager.

You should be a self-motivated business-orientated computer professional with

practical experience of working with users to define systems requirements. In addition you will need a record of successfully implementing projects in a complex commercial environment - at least one project in a leadership role. Hardware background is not critical but a knowledge of IBM and DEC would be an advantage.

A degree or professional qualification would be preferred. Age range 27-40.

In addition to the salary this position enjoys a range of excellent fringe benefits including relocation expenses should you need to move.

Write with c.v. quoting reference 09/43 to the address below or telephone for more information.

### AGB Recruitment

173 Sloane Street, London SW1X 9QG  
Telephone: 01-235 9891

A member of the AGB Group of companies

# At the Centre of Development

The Information Centre concept grew from a need to provide users with a method for developing their own applications within a controlled environment utilising information and personal computing systems compatible with existing IBM architecture. We have established this concept, as ideas for new systems dedicated to specific applications can often be identified by users with practical experience of the job. In many cases however the relative simplicity of developing such applications does not merit the full project cycle. Instead the users can access the Information Centre for consultancy support and guidance on software tools along with educational and training support.

To ensure effective utilisation of the Information Centre we are building a team of specialists to link user requirements to the Information Systems Department. We now require a DATA SPECIALIST to augment the team.

Arthur Young McClelland Moores & Co. provide clients with a full range of accountancy services including consultancy. The firm has over 160 partners and more than 2,200 professional staff operating from 21 offices located throughout the country.

Arthur Young McClelland Moores & Co.  
A MEMBER OF AMSA IN EUROPE AND ARTHUR YOUNG INTERNATIONAL

## Analyst Programmer (Data Specialist)

We are seeking an analyst programmer, with database experience, to fill the role of Data Specialist. Responsibilities include managing the effective use and relevance of data resources, defining data requirements for end user applications and providing copy management facilities. In addition the Data Specialist will prepare data for manipulation by and user computing tools, so the ability to assess suitable software tools is required. The capacity to develop and implement education aids is necessary.

You should have four to five years programming experience with a sound Cobol background in at least two hardware environments one of which should be IBM, preferably 4341. Knowledge of high level languages such as RPG II, Easytrieve and database, such as DL/I, Total or Adebis is required, along with the ability to present the Centre's services to users.

Salary To £14,000

Location: London

For further details including company information please ring Francesca Drinkwater or return the coupon below.

Ferranti Computer Systems Ltd

# Head in the clouds, feet on the ground?

Outstanding conceptual ability rooted in a soundly pragmatic orientation.

For that kind of numerate engineer - with his/her head in the clouds but feet firmly on the ground - there's no greater challenge than that offered by Ferranti's System Problem Analysis Group.

Based in Bracknell, this centre of technological excellence provides theoretical support for a diversity of projects in the area of realtime on-line systems.

In addition to this, we undertake our own research initiatives as well as studies for outside agencies such as the MOD.

Right now we're looking for men and women -

Section Leaders,  
Team Leaders, Senior Staff,  
Professional Staff

- able to perform research and development of algorithm or system level and with the potential not only to apply, but also to advance, the state-of-the-art.

Your degree should be in mathematics, engineering or another scientific discipline and this should be followed by a postgraduate qualification in a related field.

First or second class honours in a relevant subject, a strong interest in information and communications technology, and a proven ability in the following areas:

Mathematical Modelling  
Data Planning and Analysis  
Command and Control Systems  
Artificial Intelligence  
If you have a proven ability in FORTRAN, and/or previous experience of realtime applications using MASCOT, this would be a major advantage.

Join us and you'll find your projects are invariably new and always stimulating.

Rewards packages are competitive and include a comprehensive range of top company benefits including, where appropriate, relocation allowances.

The working environment is very friendly and there's a wide range of recreational activities.

And your opportunities to progress both in expertise and career - will be second to none.

So if you're a high flying engineer with your head in the clouds, make sure your feet touch ground with Ferranti.

Telephone or write, quoting reference SPAC/01/84, to The Recruitment Section, Ferranti Computer Systems Ltd, Bracknell Road, Bracknell, Berkshire, RG40 3BT. Telephone: Bracknell 3471, extension 3471.

# You...and your skills in PASCAL

## Creating the tools for Ada

*"The advent of integrated software support environments is undoubtedly the most exciting yet challenging aspect of the Fifth Generation Software Engineering Programme. It is a concept that confirms the 'forward thinking' industry professionals believe that effective software tools and automated software design are the key to a better computer industry".*

**Salaries**  
**£8,000 - £16,000**

**Covent Garden**  
**London WC2**

We are a well resourced, wholly British concern, playing a highly visible role in realising this concept by the establishment of a new Software Products Company. We are committed to achieving excellence in the production and marketing of tools for the emerging ADA Programming Support Environment.

Our positive response to this enormous software engineering opportunity, combined with our recognition of the need for product portability underwrites our future success. All that remains is to attract the team of talented software professionals whose skill and original thinking will create the products.

Our development programme creates NEW opportunities for Project Leaders, Team Leaders, Designers and Programmers who will enjoy dedicated 'state-of-the-art' development, based on powerful 32 bit super minis.

Whilst experience of ADA/APSE would be welcomed we recognise the need to train. We would therefore wish to meet with candidates possessing at least eighteen months' software engineering experience using PASCAL, or indeed any similarly structured language.

If you feel you can contribute to this exciting realisation of the user-friendly and intelligent computer systems for the Fifth Generation, contact our Advising Consultants Stephen Brown and Alan Carnell on 01 935 0671 or telephone in the evenings from 7.00 till 10.00 on Hornchurch 72610 or Harpenden 2976. Alternatively, submit a full Curriculum Vitae in confidence to our London office, marking this reference GS2.

## Systems Analysts RPG III Programmer/Analysts c £10,500 c £9,000

Recently a great deal has been said about the scope and opportunities to be found in Wales, but at Laura Ashley we've been aware of that fact for a long time. Over 20 years to be precise. In the rural beauty of Mid-Wales we have developed the home furnishing and fashion products that have made us internationally famous, investing in every kind of resource that will enhance this success still further. DP is one of our prime commitments.

We have established an IBM System/38 facility that is at the very forefront of development, serving a diverse range of applications. But because we're ambitious and forward thinking, we do not intend to stop there. We want to maximise our computer power and consequently are investigating many new areas of involvement. That's where your challenge starts.

### Systems Analysts (2 positions)

If you would like to be part of an exciting development programme covering Production, Retail and Financial systems in an online database environment, then we would like to hear from you.

System/38 experience is not essential. What is more important is an ability to develop systems from the initial feasibility stage through to full implementation with the minimum of supervision.

### RPG III Programmers/Analysts (2 positions)

If you are an RPG III programmer with at least 18 months application programming experience we would like to hear from you.

We are starting a large scale development programme covering production, retail and financial areas in an online database environment involving the setting up of an international network.

You should be able to involve yourself totally in a department that expects its development personnel to liaise directly with users with a minimum of supervision.

Benefits for all positions include a 4½ day, 38½ hour week, 4 weeks holiday, discount on company products and generous relocation assistance when appropriate.

'Phone Richard Milsum, for an informal and confidential discussion of your requirements on: 01-354 1055, during office hours or on 01-958 2553 evenings and weekends. Alternatively please send full details to me at: March Computer Recruitment Ltd, 1 Noel Road, London N1 8HQ

## Mid-Wales

## LECTURERS

Marconi's world renowned college at Chelmsford requires lecturers to instruct on systems, mainly in the radar field, and software.

### Real-time Systems

This is an excellent opportunity to advance your real-time systems knowledge. You will learn about, prepare and deliver lectures on the hardware and software of modern radar systems incorporating mini and micro computers. Good communicative skills and a knowledge of computer applications are essential with an added background in radar systems and teaching experience providing an advantage.

### Software Engineering

Required to teach programming techniques, software structures and languages used in the design of real-time systems. Programming experience is essential.

Accept the challenge to work on the latest advanced technology projects and become part of a compact team working in pleasant surroundings. Salary scales rise from £9,000 to £14,000, starting commensurate with experience. Advancement prospects are good. Relocation assistance.

A continuing or new career in teaching could be yours by applying in writing with details of experience to Mr Frank Braybrook, Personnel Manager, The Marconi Company Limited, Chelmsford Services Unit, Marconi House, New Street, Chelmsford, Essex CM1 1PL Tel 0245 353221 ext 478.

## CORAL CONTRACTS

We require analysts and programmers with experience of CORAL for a number of interesting and rewarding freelance assignments throughout the North. Should you be available now or in the near future then send a detailed cv or telephone me, Peter Moore, for an initial discussion.

P-E Computer Services Limited

## Sales Executive— Turnkey Systems MANCHESTER

Elstree Computing Limited, a member of the Laing Group, is a leader in the development and marketing of specialist computer systems for the construction industry.

We can currently offer a challenging career opportunity to an experienced sales executive in our Manchester Regional office.

Candidates, probably aged 26/40, should have several years' sales experience, ideally in a computing environment. Some knowledge of the construction industry, particularly quantity surveying, would be an advantage.

An attractive basic salary and commission based on realistic quotas will be offered. A company car will be provided.

Please write with brief details of experience and current salary to:

D. C. Madden, Personnel Manager  
John Laing plc  
Page Street, Mill Hill  
London NW7 2ER  
Interviews will be held  
in Manchester

17570

## Senior and Junior Programmers

STC Components, leaders in the manufacturing and distribution of electronic components, has an ambitious data processing expansion programme for 1984, coupled with an expanding business.

Our current hardware consists of a Tandem Honeywell D.P.S. 300, supporting over 300 terminals and ten I.B.M. System 34 minis, currently running the M.A.A.P.I.C.S. manufacturing modules, but with plans for further developments and enhancements.

To aid this expansion, we now want to recruit computer programmers with a minimum of one years experience in either Cobol or R.P.G. II to join us at our Harlow Headquarters. The duties of our Cobol Programmers are based around the writing and testing of programs through to completion, whilst the major function of our R.P.G. II programmers will be to write and test programs on the manufacturing system 'M.A.A.P.I.C.S.'

Successful applicants will have excellent career prospects in both the programming section, and in other parts of the Data Processing Department. Salaries are set at very competitive levels, which take into account the current market rates, age and experience of the individual, and are reviewed at regular intervals.

Benefits include five weeks holiday and generous relocation assistance, where appropriate. In addition, our Harlow Headquarters are within easy reach of London and excellent cultural and recreational facilities.

Please send full personal and career details to Phil Gray, Headquarters Personnel Department, STC Components, Edinburg Way, Harlow, Essex. Tel: Harlow (0279) 26811 Extension 2690.

## YOUR FIRST MANAGEMENT MOVE SYSTEMS MANAGER

**HONEYWELL L6** **c.£10,000 + Relocation**

Our Client, based on the Bucks/London borders, is part of the L.R.C. group. They have recently installed a Honeywell L6 which will shortly be upgraded to a DPS 6. They wish to appoint a Systems Manager to liaise and eventually take over systems being implemented by a Software House.

Applicants will probably be in an Analyst/Programmer role with experience of Honeywell L6 Cobol and/or Screenwrite. Strong user skills are essential as there will be a considerable amount of contact with management departments. The successful candidate will also have the opportunity to work with microcomputers.

In return our Client offers a good starting salary with regular reviews, 22 days' holiday, NCPS, relocation assistance where necessary and other large company benefits. If you are able to work on your own initiative and enjoy a challenge contact Mike Hermer for further details.

## CHIEF SYSTEMS ANALYST

Circa £13,950

The Royal Liver Friendly Society, Liverpool, one of the largest collecting assurance societies in the country, with funds of over £340,000,000, has a vacancy for a Chief Systems Analyst. The Society has an I.B.M. 4341 Computer with 4 megabyte memory using fixed disks and tapes. Additionally, a number of colour VDUs located in User Departments are attached to the mainframe. Several major new systems are currently at an early stage of development. These include network development and the use of microcomputers. To assist in the planning and control of these systems a Chief Systems Analyst is required. The successful applicant will report to the Systems and Programming Manager leading a team of some 20 Analysts and Programmers. He/She will be at least 30 years of age, must have had a minimum of 5 years experience as a Systems Analyst, and have led systems development work on major projects. Knowledge and experience in the field of communications and microcomputers would be a distinct advantage. In addition to a salary of £13,950, fringe benefits include annual bonus, 35-hour week on flexible working hours, and contributory pension scheme. Generous concessionary rates of interest for House Purchase and re-location expenses where appropriate are also available. Written applications, giving full personal details, qualifications and experience, should be addressed to:

Mr. M. E. Penny,  
Management Services Manager,  
Royal Liver Friendly Society,  
Royal Liver Building,  
Liverpool L3 1HT.  
Tel: 061-226 1481 (Ext. 271).

## ANALYST/PROGRAMMER

New challenge in the Leisure Industry

**Fylde Coast** **c.£9,500**

The DP Manager of this thriving member of a substantial UK group, involved in the Leisure Industry, needs the support of a talented and innovative Analyst/Programmer. Following a brief period of systems maintenance which will familiarise you with the organisation and its DP procedures, you will play a major role in transferring existing work on to a Honeywell Laval 64.

The company is expanding its DP activities and this is an ideal opportunity to be in at the ground floor of new developments. If you are an enthusiastic, ambitious, Analyst/Programmer, with COBOL and possibly BASIC experience, this thriving company offers excellent rewards and future prospects.

C.V. to: Cathy Homar, P.E.R., 8th Floor, Victoria House, Ormskirk Road, Preston PR1 2DX. (7553)

**PER** Executive Selection

Chr. Michelsen Institute is an independent multi-disciplinary research institute which serves industry and society in Norway and abroad. The work of the Institute is financed by means of government grants and by R and D Contracts.

CMI's dept of science and technology has a staff of 105, most of whom are graduate scientists or engineers.

## COMPUTER GRAPHICS/ANIMATION

Applications are invited from highly qualified and suitably experienced persons for a position in computer graphics and animation. Applications with a Ph.D or M.Sc in computer science will be preferred.

Research activities in the dept of science and technology are concentrated in the following areas:

- Powder technology, dust and gas explosions
- Instrumentation and measurement technology
- Remote sensing and image processing
- Signal processing, including seismic interpretation
- Mechanical design and precision engineering
- Electronic design

Many of our projects in these fields utilise computers for simulation, data reduction, and design purposes. In order to enhance our ability to interpret and understand computer output, we plan to expand our use of computer graphics and animation techniques. Further details of this challenging appointment can be obtained from Heleen Holland at CMI. Deadline for applications is February 20, 1984.

CMI offers competitive salaries and an attractive work-place on the outskirts of Bergen, on the west coast of Norway. The Institute will assist in obtaining suitable accommodation. Applications, accompanied by curriculum vitae, should be sent to the Director, Dept of Science and Technology,

Chr. Michelsen Institute  
Postboks 38  
Fantoft, Bergen, Norway.  
Tel: + 47 6 284410; Telex: 40008 CMI N (7578)

**THORN EMI**  
**Electronics**  
DEFENCE SYSTEMS DIVISION

With the further development of high technology Video Processing equipment, we are looking for Team Leaders and Software Engineers; people who need an outlet for their innovative and technical abilities. The work is demanding and exciting with scope to progress within the organisation for ambitious and talented individuals.

Based at Feltham, or our new facility being established at Woking, Surrey, you will be involved in the very latest developments of video processing equipment, utilising an excellent array of design tools. Experience of working on high speed, real time systems using minis and micros, particularly PDP 11 or VAX using CORAL, or INTEL 8086 using Assembler is desirable.

These unique positions command salaries of £8 - £14K with excellent large company benefits.

Write or phone for an application form to Judy Ball, THORN EMI Electronics Ltd., Defence Systems Division, Victoria Road, Feltham, Middx. Tel: 01-890 3600 or 01-751 0702.

There are a few people who could make Isaac Newton turn in his grave...

They are the professionals who through one simple quality, ambition, can put paid to the theory 'what goes up must come down'. This sheer determination to get ahead keeps their careers progressive and optimises the scope of their responsibilities. But they need the right environment. In only a few years HAL Computers Ltd have grown through a policy of high standards, aggressive marketing and a commitment to use some of the best products to become the largest independent peripheral distribution houses in Europe. Few other companies can rival their success or opportunities. If you want to get to the top and have the ability this is the company where you will find the head room.

**EXPORT SALES**  
**MANAGER DESIGNATE**  
**£30K OTE + and Car**

This key role is concerned with developing and servicing their continental sub-systems distributorships, making full use of a first class product range and excellent technical back-up. A European language plus an in-depth appreciation of both European markets and the approach to business would be a distinct advantage. They say that you can't keep good professionals down; this is a company that wouldn't want to.

**SOFTWARE ENGINEERS**  
**£ Excellent +**  
**Generous Package**

You will be joining a company that thrives on technical excellence and that will expect you to achieve a similar standard, customising products to meet their clients needs. In your mid twenties with good communication skills and business acumen you are likely to have gained your expertise of Apple or IBM PC operating systems in a small software house.

So if you are really ambitious call  
Richard Nash on 01-734 9723 or 01-581 5829  
Evening & Weekends.

# ... NEW IBM Installation

## Systems Programming Manager

West Midlands  
(Full Relocation)

to £15,500  
+ 2 lease cars  
+ benefits

A new Company has been established to provide a Parts and Equipment distribution facility for one of the UK's leading Manufacturing Organisations. From a prestigious base on the South East Boundary of Birmingham, the Company will provide an autonomous service centred on IBM hardware - initially IBM 3031 AP under MVS using TOTAL and ENVIRON 1. A Management team has been recruited to provide the impetus to a challenging systems development plan to cater for the needs of the business.

A key position exists for a **SYSTEMS PROGRAMMING MANAGER** - to head a team engaged on technical support to the installation. This important post calls for a strong technical knowledge of IBM MVS environments including database and telecomms (ideally TOTAL/ENVIRON 1 CICS). Areas of responsibility will include Databases, Personal Computing, Operating Systems, as well as

planning future technical enhancements to the installation. Candidates should possess the ability to combine technical knowledge with effective man management skills and be able to contribute to the forward planning of the Company.

The installation is located in an attractive area close to the green belt and surrounding areas provide a large choice of housing prices and styles.

An excellent salary will be paid, enhanced by 2 leased cars under a Management Car Plan, and medical cover through BUPA. Comprehensive and generous relocation assistance is available to this delightful area with easy access to the rural countryside of Warwickshire and Worcestershire.

To apply please contact the Advisers to the Company, **Grahame Murphy or Martin Stainthorpe on 021-236 3761** (24 hour answering service) or 021-778 2974 till 9.00 pm evenings.

## Attractive five figure starting salaries plus relocation assistance Rural Essex

Our Client is one of the largest IBM users in the UK, running an expanding nationwide teleprocessing network of over 1,800 terminals and RJE's, from two major IBM Data Centres, one of which is located in a pleasant, rural area of Essex.

The site maintains an impressive configuration comprising IBM 3033 and Amdahl V7 mainframes running MVS/JES2, IMS DB/DC, CICS/DLI, VM/CMS, RAMIS, NCP, VTAM, MSNF, and TSO/SPF. A hardware upgrade, possibly involving the installation of a third large mainframe and migration to MVS/XA are planned for this year.

In such a progressive environment, opportunities for career progression are excellent. Openings currently exist for Systems Programmers with varying levels of experience, who seek broader technical involvement with the very latest in IBM systems software.

Applications are therefore invited from Systems Programmers with at least twelve months experience, ranging up to Senior Systems Programmers, where, at the more advanced levels, specific skills in perhaps VTAM or IMS would be especially welcome.

Whatever the length or breadth of your experience, our Client is keen to discuss the future with you and, in simple terms, will pay you what you are worth.

Apart from superb career prospects and involvement with the latest IBM hardware and software in a developing site, you will benefit from on-going training and excellent working facilities in a new and well equipped Computer Centre, situated in clean, rural surroundings, away from the 'commuter crush', yet only 35 minutes by rail from London and within easy reach of the popular East Coast resorts.

For Systems Programmers looking for room to develop their careers in a large and well resourced IBM environment, our Client offers unrivalled opportunities for personal and technical development. If you wish to refresh your career, start by sending your c.v. to **Ian Payne** at the SCR Birmingham office, giving details of current and expected earnings, home and work telephone numbers (to be used with the utmost discretion) who will arrange to meet with you in confidence at SCR offices in either London, Birmingham or Manchester to suit your convenience.

## SYSTEMS CONSULTANTS

W.C. London c£14,000 + Car

With significant computerisation projects underway in its subsidiaries this major UK finance house represents an ideal growth environment. Due to an internal promotion they now need an experienced Senior Analyst/Project Leader.

You will undertake feasibility studies and provide advice on the selection of hardware and software and the subsequent installation planning and implementations. As you will also be developing requirement specifications you must have a thorough understanding of all aspects of DP with the ability to communicate with all levels of management. Previous consultancy experience would be advantageous. The companies are located, mainly, to the North of London and there will be some travelling.

Salary is negotiable according to experience and will be accompanied by a generous benefits package which includes a non-contributory pension, group BUPA scheme, subsidised restaurant, and after a qualifying period, loan and mortgage facilities.

Ring David Mason Johns now at KPG or 01-891 0906 (evenings or weekends) for an immediate interview.

## Software Tools

Central London: Salaries to £18K

Software Designers and Managers, with at least four years experience in software design and development, are urgently required to join our clients, newly created team. As this leading Systems and Software House is aiming to build a variety of tools and methods in their software environment, specific experience is less important than high basic ability and a strong interest in improving the development process.

However, candidates who have developed Programming Support Environment (e.g. ABSE), Software Productivity Analysis Project Management Tools will be of particular interest. Although these positions will be extremely demanding, job satisfaction will be high and successful candidates can be assured they will remain at the forefront of software methodologies. Ref: L/S/A

## Comms Software

Overseas: Package to £22K

An internationally renowned Systems House and Computer Manufacturer has recently launched a range of Data Communications and Networking Products and is, therefore, seeking additional Programmers and Designers. Suitable applicants should hold a minimum degree and have at least three years relevant post-university experience with either a Systems and Software House or multi-branch computer manufacturer. In particular, you will be expected to have an in-depth knowledge of Data Communications, Networking Systems (LAN's or WAN's), communications protocols (X.25, SDLC/HDL) or office automation systems. Successful applicants will undergo intensive product training at the Company's Copenhagen Headquarters and, thereafter, you will be based in USA, Singapore or an EEC country. Ref: L/S/A

## Micro Applications Consultants

London and E. Midlands: Salaries to £25K (O.T.L.)

Profile: KPG Computers Ltd is a leading supplier of UNIX based systems and networks in particular (OS/2, T) and is again poised for a period of planned growth in 1984. The Company has recently established a network of nationwide service and support centres in its Regional Head-Quarters, based in The City and Nottingham and support offices in Bristol, Manchester and Slough.

Personnel: Applicants aged 25-35 years should have practical programming, systems analysis or design experience gained in a commercial environment. Your programming background must include fluency in two or more of: PASCAL, C, COBOL, C++, FORTRAN or Basic. Of particular interest will be those who can combine a sound knowledge and proven experience of applications software in such areas as word processing, database management, operating systems, and communication software. Candidates who are familiar with UK accounting practices are also encouraged to apply.

Job Content: All positions entail a significant degree of client contact in the form of product demonstration, seminars, in-house and on-site client training, and post-sales support. Well developed interpersonal skills are therefore essential. A willingness to travel within UK and when necessary, also of paramount importance. Rewards: Earnings will only be limited by your ability since in addition to a very competitive salary, all clients offer an outstanding sales and performance related bonus scheme. All positions carry a generous allowance of company car.

Applications: Please forward a well documented resume or alternatively telephone one of our Consultants quoting Ref: L/S/10.

## Graduate Programmers

London & H. Counties: Salaries to £8.5K

A number of exciting opportunities have arisen in London and the Home Counties for Programmers who graduated in 1982 or 1983. You should hold a first or second class honours degree in Computer Science, Mathematics or Electronic Engineering and of particular interest, will be applicants who additionally hold an MSc. It is essential for all positions that you offer fluency in PASCAL, C, ADA, PROLOG, LISP or Assembler. Ideally your project work and/or subsequent experience should include compiler writing, expert systems, firmware development or UNIX. Ref: L/S/A

## Real-Time Systems

Dorset: Salaries to £16K

The recently created subsidiary of a major Systems and Software Consultancy has a number of vacancies for Real Time specialists. Programmers to Project Leader level. Current projects include the development of C, packet switching and guided weapons systems for both UK and overseas clients. Their requirement is for candidates who have been engaged on the development of real-time systems utilising high level, block-structured languages such as Pascal or RTL/2. Alternatively, our clients will consider those with a micro-Assembler background or fluency in Fortran, especially if supplemented by exposure to a structured development environment such as MASCOT. Ref: L/S/D

## VAX/FORTRAN Progs

London: Salaries to £12K

An International Systems Company specialising in the development and marketing of communications software is seeking additional Programmers and Designers for its London Headquarters. Candidates, aged 22-27 years, should hold a numerate degree and have a minimum of twelve months FORTRAN programming experience, preferably gained in a PDP-11 or VAX environment. Application areas of interest include Office Automation, Viewdata and Prestel, Data Communications and Distributed Processing. Since these positions entail a high degree of client liaison, you should possess excellent personal communication skills and be prepared to travel both nationally and internationally. Ref: L/S/E

# DALROTH

## WORLDWIDE COMMUNICATIONS SYSTEMS

# Project Managers

**£16,500-£18,500 + car**

**LONDON BASED**

Our client, with development headquarters in London, was established more than a decade ago and is currently a market leader in the Financial, Banking and Trading areas.

The Company are looking for Project Managers for their Communications Development Group to enhance their existing highly successful operations and, at the same time, establish a new generation of software to service its worldwide client base through its Operating Companies in the USA, Far East, Middle East and Europe.

The successful applicants may be drawn from a wide range of backgrounds, but must have realtime or online development experience in a communications environment, be highly motivated individuals and able to work on their own initiative. They should also be willing to travel, both in the UK and overseas.

Systems are presently based on DEC PDP11 and VAX hardware but future strategy is to make the software portable and therefore implementable on other CPUs.

This is an ideal opportunity to influence the direction of future products, to grow with an expanding international organisation, and to be responsible for the design and implementation of their next generation of communications developments.

For further information, please contact Jenny Dalrymple-Hay or Ian Murray West on 01-493 2947, from 8am to 10pm Monday to Friday, or weekends Jenny Dalrymple-Hay on Beaconsfield (04946) 4579, quoting REF 5040.

## CONSIDER HOW MUCH WE CAN OFFER YOU

As the Software Services Division of the UK's largest and most successful mini and mainframe manufacturer, our organisation offers you exceptional opportunities. In order to cater for the ever increasing demand for our services, we are, once again, seeking to recruit the highest calibre of D.P. Professionals to join our elite team.

In exchange for your valuable skills, we offer the opportunity to work with superb technical resources, many still unannounced, at the leading edge of major D.P. developments in the commercial world, first rate remuneration and a career structure designed to capitalise on your particular talents.

You will be based in either our Birmingham or Reading offices, but a major and attractive feature of these posts is the requirement for mobility - and the opportunity for travel overseas from time to time.

### PROJECT MANAGERS c.£15,000

Able to organise, co-ordinate and manage people, you are seeking a new challenge. We offer the opportunity for you to take on major systems from inception through to completion controlling teams of first rate technicians. You will be working mainly on site with our most valued clients, and your personality, ability and managerial skills will be the measure of our credibility.

If you possess the experience to control projects in either of the following environments, adhering to the high quality assurance standards expected from us, this is your opportunity to enhance your career aspirations.

ICL 2900 VME IDMSX CAFS QUICKBUILD  
ME29 TME TP IDMS OMAC

### IDMS DATABASE DESIGNERS c.£12,000

Physical and logical database design is your forte. You are now looking for the opportunity of working with the very latest techniques in this field. We can offer you the challenge of designing leading edge systems for the very latest ICL hardware using tomorrow's methodology! If you have experience of database design in either of the following environments, we offer you the opportunity of capitalising on your skills and dramatically enhancing your career.

VME IDMSX DDS CAFS/ME29 TME TP IDMS DDS

Are you ready to take the lead with the leaders? Telephone our recruitment consultant and ask for Phil Harkness on 021 643 8501 (business hours) or 021 308 4285 (evenings/weekends) or fill in and return the FREEPOST coupon to Computer People Midlands, FREEPOST, Alpha Tower, Birmingham B1 1BR.

# Your career comes first — but not if you come second

## SALES SUPPORT CONSULTANTS £10K to £14K

And you may well be coming second in your current position by not working for the most professional and respected systems company in the U.K., with an international reputation to match.

The company success can be attributed in part to the design and development of one of the world's leading relational database products. More importantly, their success is due to the quality of their people.

Success has led to growth and the need for professional sales support consultants to join the existing team. They are looking for database and Fortran experience. Your database knowledge may have been gained in a supplier or user environment. You will probably have a degree and a technical background.

Your responsibilities will include:

- Researching and answering technical enquiries
- Supporting sales with presentations and proposals
- Assisting customers to design and tune their databases
- Setting up demonstrations and benchmarks
- Database Consultancy

The first move you can make in putting your career first, is to phone Keren Whelan for an informal discussion and interview at BUSINESS: 01-637 9611 or on Sunday HOME: 01-241 3239 or send her your cv.

MANAGEMENT &  
EXECUTIVE SELECTION

 Digital Research

## European Product Development Manager

£20,000 + car

Digital Research is the world's leading supplier of microcomputer operating systems and program development tools.

As such it has established a network of European offices and distributors. To help it maintain its 100% per annum growth rate, the post of European Product Development Manager has been created. The responsibilities include:

- The internationalisation of software products, developed both locally and in the USA, on a country-by-country basis.
- The provision of strategic, technical and commercial input in the development or acquisition of software products.

As the successful candidate you will probably be educated to degree level. You will have a strong technical background preferably gained within a multinational supplier of semi-conductors/electronics/computers/peripherals or software.

The role demands an in-depth understanding of operating systems and compilers.

You will be capable of co-ordinating product development programs using contracted resources both in the UK and on the European continent. As it is European in scope a second language would be an advantage.

The remuneration package is highly attractive and includes a relocation package to the Digital Research west country headquarters where appropriate.

For further information please contact Tony McGrath or Karen Whelan on 01-637 9611

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

The Market Leaders

## SENIOR PROGRAMMER

£11,000

We are a small, fast growing business specialising in the design, development, testing, installation, commissioning and maintenance of computer systems for a wide range of mainly international customers. The company is expanding rapidly and is seeking a senior programmer to provide business software and to develop and maintain the company's software for clearly defined markets. Extensive use is made of a range of IBM hardware and software.

Applicants should possess sound programming skills, preferably in COBOL and CICS (other languages will be considered). Systems experience in a business environment is preferable and the work is likely to be very good communications skills.

The company can, in return offer you:  
★ An exciting and progressive working environment  
★ A range of bespoke and package software projects  
★ The opportunity for career development which only a leading fast growing company can offer

Please write to:

Peter Davidson, Managing Director, PACT, 17 Lyons Crescent, Tonbridge, Kent TN11 1EX, Telephone 0733 360011

**PACT**

## AMERICAN EMBASSY REQUIRES A COBOL PROGRAMMER

With two to three years' experience, knowledge of Wang VS an advantage. Will work on new programme and current systems. Installation consists of two Wang VS-100s, with a wide variety of applications.

Hours 9am to 6pm. Salary £9,079 p.a. To apply send full details of qualifications and experience to:

PERSONNEL OFFICE  
AMERICAN EMBASSY  
24 GROSVENOR SQUARE  
LONDON W1A 1AE (7644)

## COMPUTER SOFTWARE AND TRAINING

Conventional and Unit Linked Life Assurance

As a result of re-organisation and continued expansion Scottish Provident has a vacancy for a person with a broad experience of computing to work in the areas of training and software evaluation, implementation and user support. Training will be of computer staff for example trainee programmers and user. Software evaluation will normally be of packages produced within Scottish Provident but implementation and user support will also include software produced externally. The successful candidate would therefore require to be a good communicator and able to work on his/her own initiative.

Scottish Provident's data processing is carried out mainly on a Burroughs medium systems machine but use is also made of mini computers and key to disk equipment. Salary will fully reflect qualifications and experience. Other benefits include a non-contributory Pension and Life Assurance Scheme and a very attractive Staff House Purchase Scheme. Please apply in writing with full personal and career details to The Staff Manager, Scottish Provident Institution, 6 St. Andrew Square, Edinburgh EH2 2YA.

**SCOTTISH PROVIDENT**

## N.C.R. EXPERTISE

Birmingham and Bridgwater is a major building society with assets approaching £450 million and over 70 branches serving the Midlands and South West of England.

We have recently upgraded our mainframe to an NCR V8675/II running under VRX, and are about to embark upon an extensive development programme to introduce counter terminals into all our branches. This has created the following attractive career opportunities.

**PROGRAMMER/ANALYST £8,300-£9,590 p.a.** (Review pending)

The successful applicant will play a major role in the investigation, design and implementation of new systems and must possess the ability to communicate effectively with all levels of staff. A knowledge of on-line techniques and/or database principles would be an advantage.

**PROGRAMMERS £7,000-£8,050 p.a.** (Review pending)

Candidates should have at least twelve months' in-depth experience of either NEAT/3 or COBOL.

An exciting career is offered to DP professionals who are prepared to work on their own initiative and accept the responsibilities these positions demand. In addition to a competitive salary structure, these positions also offer the following benefits:

- ★ Concessional mortgage facilities
- ★ Free private medical care (including spouse and children)
- ★ Low-cost contributory pension 2% scheme with life assurance (4 times annual salary)
- ★ Permanent health insurance
- ★ 22 days' annual leave (increasing with service) plus 8½ days Bank Holidays
- ★ Subsidised staff restaurant
- ★ Free, easy car parking
- ★ Relocation package where appropriate

In the first instance applicants should write, giving full personal and career details, including current salary, to:

Ray Jones, Computer Manager  
BIRMINGHAM AND BRIDGWATER BUILDING SOCIETY  
53/57 Waka Green Road, Moseley, Birmingham B13 9HX

**BIRMINGHAM BRIDGWATER**  
BUILDING SOCIETY

We are one of the largest Financial/Banking Systems Houses in the world with an impressively large multinational client portfolio. The opportunities described have been created by business expansion world wide and are available to candidates who appreciate an environment where promotion is on merit and are able to assume increasing responsibility. Candidates who possess one or more foreign languages would be of particular interest for support of European sites (Spanish, French and German).

For a full and complete description of the opportunities and the requirements, please contact our advising consultant Roger Wilkins at:

- Knowledge of International Finance/Banking
- Full client product implementations
- Project Control
- Pre and post sales support
- Requirement studies
- Client management and responsibility
- Real-time expertise
- Design/Specification
- Programming DEC, VAX
- Financial/Banking applications
- Client involvement

A personal growth and career development bonus (including a bonus for senior staff) plus normal international company benefits are a feature of these positions which are based in the City.

Interested candidates should contact our advising consultant Roger Wilkins at:

Experience in scanning systems/video circuitry is a particular need; knowledge of micros and digital electronics is essential. Excellent prospects. Re-location assistance. Ref. 212

**SYSTEMS PROGRAMMER/  
TRAINEE SYSTEMS PROGRAMMER**

Salary to £11,600 + profit share + relocation

ROBERT HORNE is probably Europe's most successful paper merchant. Our annual turnover currently exceeds £80m and we employ more than 600 staff at our Northampton HQ and 19 branches/subsidiaries throughout the UK. We are a friendly, interesting and challenging organisation to work for. We are now looking for computer professionals to join our staff team responsible for technical services - software, data-base administration and MRP system administration. The team is also involved in the development of distributed computing giving our branches local computing facilities.

The **SYSTEMS PROGRAMMER** should have 3 years' computing experience, the last 18 months of which should have included working with and installing Sperry software - the Company currently uses CMS, DMS, and TSP. An interest in the new technologies especially micros and mainframe and micro connection would be useful. Further training will be provided where required.

The **TRAINEE SYSTEMS PROGRAMMER** should have 18 months' experience with some exposure to Sperry software. The Company will be looking for enthusiasm to progress in these areas as well as an interest in the new technologies. Training will be provided as necessary.

The jobs will be based in our modern Northampton HQ complex where squash and swimming facilities are provided. Housing in the Northampton area is very reasonably priced, alternatively a Development Corporation rental can be arranged.

Please write with full career details to:  
Martin Jones, Robert Horne Group plc, Huntmen House, Merton Close, Moulton Park, Northampton, Tel. (0804) 495333

or for more details telephone Tim Hunt on the above number or on (0804) 882807 outside normal working hours.

**Success breeds Success**

Information Builders (UK) Ltd market and support the highly successful 4th generation language FOCUS, which is currently one of the leading software products available. Over 1000 copies have been sold so far. The demand for FOCUS and its sister product PC/FOCUS running on the IBM/PC, which was successfully launched late last year, has created a need for highly motivated and professional staff to assist in our expansion in the British Isles.

**Sales Executive**

The sales executives are responsible for marketing FOCUS and PC/FOCUS to major companies by means of seminars and product presentations in conjunction with an extensive promotional and advertising campaign that is initiated by the marketing team.

The position provides the opportunity of growth into a product management function in the near future as the company develops new lines of business.

Full technical training and support is provided.

A good degree and four years experience in the computer industry are mandatory, as is some experience of selling advanced computer software products and a good understanding of IBM products.

A company car is provided with all the usual fringe benefits.

**Sales Support Executive**

The Sales Support executives work with the sales team assisting them at seminars, running benchmarks, preparing demonstration systems and handling the technical issues raised by our prospects.

You will need to combine good communication skills with a solid technical background and enjoy the 'sales' environment.

You will be a graduate with five years experience in the computer industry and have a wide knowledge of IBM operating systems, DBMS's and 4GL's. A background of sales support in the computer services sector would be desirable.

A company car will be provided plus all the usual fringe benefits.

**Senior Analyst/Programmer**

£12,000 to £15,000

The Senior Analyst/Programmer is responsible for designing and implementing FOCUS systems under contract with our clients in the British Isles and Netherlands.

You will be a graduate with at least 2 years experience of TSP/IVMS or VMCMS including at least one year of COBOL, FORTRAN or PL/I. In addition sound experience of designing and implementing several commercial systems using FOCUS or an equivalent 4GL would be advantageous.

You should also have the potential to grow into line management in the near future.

This position is new and will report to the Manager of the Professional Services Group. This team will expand in the future towards developing specific FOCUS based packages.

**Consultant**

to £15,000

The Consultant is responsible for providing technical support to our clients, primarily through conducting formal training courses at our offices or on client sites and informal training through consultancy assignments at client offices.

You will be a graduate with at least three years experience in the computer industry, a sound knowledge of IBM software and preferably some experience with FOCUS or another 4GL. Good communication skills and an interest in working closely with client staff, both formally and informally, are highly desirable.

For the right candidate a company car will be provided plus all the usual fringe benefits.

**Technical Consultant**

£12,000 to £15,000

The Technical Consultant is responsible for providing in-depth technical support to our clients in the way FOCUS interacts with the various IBM operating systems used.

You will be a graduate with some 5 years experience in the computer industry coupled with a sound knowledge of at least MVS/TSP, VM/CMS or IAS/DC and practical experience of at least one major DBMS.

You will need good communication skills and the ability to present complex technical issues lucidly to your colleagues, our clients and prospects.

For the right candidate a company car will be provided plus all the usual fringe benefits.

Information Builders is a marketing oriented company and all our staff enjoy that very demanding life style. A willingness to travel throughout the UK and W Europe plus a recognition that the client's needs come before ours is essential.

In all instances apply in writing with a full C.V. to:

Mr. R. R. Scawen,  
Information Builders (UK) Ltd,  
Station House,  
Harrow Road,  
Wembley,  
HA9 6EB.

**@ FOCUS**

The British Medical Association is a well-established and renowned public body with its headquarters in Central London between Euston and Russell Square. A major review of current and potential applications is in hand as to hardware revision and two vacancies now arise.

**TECHNICAL AND OPERATIONS SUPERVISOR**

c.£12,000 p.a.

**BUSINESS/SYSTEMS ANALYST**

c.£11,000 p.a.

Terms and conditions of employment are above average.

Full job specifications and further information is available on request. Telephone: 01-387 4499, ext. 37.

Applications must be received before 17th February, 1984, and addressed to: Mrs Barbara Dyer, Personnel Manager, British Medical Association, BMA House, Tavistock Square, London WC1H 9JP.

**ANALYST/PROGRAMMER**

MINI/MICRO COMPUTERS

WEST COUNTRY

£9k-£12½k

Application development and support for systems supplied to the Typewriting/Printing Industry. We employ a small group of talented software people and now need to expand this team to cope with a growing order book. Experience of mini or micro assembler software is a must with a minimum of three years' experience in computing.

We are currently committed to work in the following areas:

- ★ Text processing
- ★ Typesetting
- ★ Graphics
- ★ Mathematical formulae

Interest has now established itself as a market leader within the Printing Industry - you could play a major part in our continuing success.

If you have the talent and self-reliance we can offer a lively, stimulating environment with plenty of scope for a variety of roles.

Please contact Wyn Thomas on 0761 232606 or write to him with full c.v. to: Intersect Computer Systems (UK) Limited, New Rock, Chilcompton, Bath BA3 4JE.

**MARKETING  
PROFESSIONAL-****Your chance  
to communicate  
with a  
brand new market.**

Racal Millicom Limited, a member of the highly successful Racal Electronics Group and based in Newbury, Berkshire, was recently formed having won the license from the British Government to provide a nationwide radio-telephone network by means of cellular radio technology. Introduction of this network represents a major and challenging development in telecommunications and the Company now seeks to expand its Marketing function to take full advantage of this development.

A Senior Marketing post exists therefore, wherein the successful applicant, reporting to the Commercial Director, will contribute to the market research, product policy testing and further application studies, together with supporting the agreed sales programmes by co-ordinating resultant advertising, P.R. and promotional campaigns.

Applicants for this new and interesting position are likely to be aged 30 to 45 years and possess considerable marketing experience in a communications or "brown

goods" environment. A proven track record of achievement is required.

The successful applicant will receive a competitive remuneration package and Company car, over 5 weeks annual leave, pension and free life assurance cover. Assistance with relocation expenses will be given if appropriate.

This position offers great potential for the right person. If you think you are that person then please write, in confidence, stating age, experience and salary expectations to:

Mr. G.E. Fisher, Personnel Manager,  
RACAL MILLICOM LIMITED, The Courtyard,  
2-4 London Road, NEWBURY, Berkshire.

This post is open to both male and female applicants.

**RACAL****World leaders in electronics****SOFTWARE ENGINEER £10,000 +**

Experienced in Fortran/Pascal and Assembler for real-time micro-based equipment.

To develop and design software for our range of personal identification equipment.

An excellent chance to join a small company with fantastic potential, yet be part of a substantial group with a secure position.

Write with C.V. to: Veeanoy, A.I. Transaction Security Ltd., P.O. Box 72, Guildford, Surrey GU3 3BT. Tel: (0483) 503363

**Sales Support - Microcomputers**

Opportunity to join a new fast-growing company - based in Oxford Street, London - affiliated to a successful microcomputer group in the U.S. dealing with leading international brand names. Suitable candidate should ideally be a young graduate with one or two years working knowledge of microcomputer systems. Experience in sales, technical support and customer liaison in relevant markets and some knowledge of computer programming/accounting would be desirable.

Excellent opportunity to train and grow with company. Salary £10,000 NEG.

Please write with C.V. to: A. Khoury, Oryx Systems, c/o BS Pler House, Oakley Street, London SW3 5NH.

Credit Suisse First Boston Ltd., a major International Investment Bank based in the City, require the following experienced people to work on their twin VAX-11/780 installation.

**Systems Development Technician**

The Systems Development Department requires a highly experienced technician with substantial VAX COBOL knowledge to guide the structural design of banking application systems, and to provide general technical support to the bank's programmers. User-related experience of VMS with COBOL is mandatory and banking application knowledge would be helpful.

**Information Support  
Designer/Programmer**

The recently-formed Information Support Services Department requires a broadly-based Designer/Programmer to work closely with end-users in investment management and security trading. The primary need is for someone to assist these users to get results from the computer quickly. The necessary programs may be written conventionally in COBOL, bought in as packages, or built using fourth generation techniques such as query languages, modelling packages and application generators: the successful applicant will be expected to participate actively in the evaluation and selection of such techniques. Candidates must have a substantial record of personal success in implementing complete working systems.

**VAX Designer/Programmers**

Two results-oriented Designer/Programmers are required for their twin VAX-11/780 installation in the City.

A competitive salary will be offered for all of the above positions along with generous banking fringe benefits. Please write with full details to: Angela Callan, Credit Suisse First Boston Ltd., 22 Bishopsgate, London EC2.

## TEAM LEADER SYSTEMS DEVELOPMENT

Move into rural Wiltshire and join in our success

Since 1965 our company has grown into a £30 million, truly international business — one of the major independent frozen seafood companies worldwide. Along with our success the company still operates a policy of encouraging individual participation.

As Team Leader, reporting to the Accounts Manager you will have the opportunity to make a real contribution to computer systems development at a time when all our systems are under review to meet future needs.

Ideally you will have a business studies qualification and general business background, including 2-3 years in a computer environment with relevant systems experience.

Starting salary range will be c£10,000, with progressive increments. Benefits include non-contributory pension and life assurance, free BUPA and relocation help to this attractive area.

Our system is based on a Honeywell DPS4, using release 1.10 with IPS and our language is COBOL.

For further details please ring or write to:  
Alan Mundy, Flying Goose Limited, Barrow House, Bishopcleeve, Warrminster, Wiltshire BA12 9HL. Tel: (0985) 214565.

# PERSONAL COMPUTERS

# First Division Opportunities

My client is part of a diversified international group with a turnover in excess of £600 million. It is no stranger to the microcomputer market, from stand alone business systems to powerful superminis. Based on this successful penetration, a new division has been formed to sell multiple IBM PC and Local Area Network configurations into substantial organisations. Using the Group's own IBM mainframe to demonstrate wide area communications is seen as a distinct competitive advantage.

## COMMUNICATIONS SPECIALIST up to £15,000

**London and Home Counties**  
A software expert with hardware familiarity, you will provide both pre-sales and post-sales technical support to a small, professional sales team based in the Thames Valley. Initially covering

Southern England and the Midlands, you will encounter a broad range of proposed wide area communication systems. Training in IBM PC and state-of-the-art Local Area Network technology will be provided where necessary. IBM mainframe environment and front-end communications experience, including 3720 and 3780, are essential. An ideal background will encompass SNA/SDLC, BSC, and to a lesser extent, Systems 34, 36 or 38. Your brief will involve liaison at board level, so we will be looking for a mature approach, combined with effective presentation and demonstration skills.

This is a key appointment within a leading edge team, and career prospects are genuinely outstanding for the successful candidate when a national branch network is established. An attractive negotiable salary will be complemented by large company benefits. Ref. W1720.

## COMPUTER SALES PROFESSIONALS on target £23,000+ car

**London, Bristol, Birmingham**  
We are also looking for hungry, achievement orientated sales people with the confidence and flexibility to make major deals in the multi-user, multi-function market involving configurations from £20K to £100K.

Quite simply, this company does not believe in launching products unless they work. It is also committed to providing the very best in terms of professional support, including a 6-figure marketing budget and a first class training and development programme. Top players could easily be team leaders within 12 months. Ref. W1721.

If you're ready to join a First Division side, apply for a transfer now. Contact Peter Lloyd quoting the appropriate reference.

24 hour answering service Recruitment Consultants, Craven House, 121 Kingsway, London WC2B 6PA.

# OPPORTUNITIES IN THE SOUTH

## HEWLETT PACKARD - SENIOR

**C.£14,000**  
My client can offer a challenging job with excellent potential if you have over 7 years' D.P. experience, a sound knowledge of HP3000, and no independent personality with a desire to succeed. Based in London they are about to embark on many new development projects due to major company expansion. There are excellent prospects to become involved in analysis and project leading. Experience of FORTRAN, QUZ, QUICK K or CDB would be assets but not essential. An excellent salary of £14,000 is offered - this could be increased for the right person. Ref. HW/1010

**MOVE INTO ANALYSIS - RSTS/E TO £11,000**  
This is an excellent opportunity for a Programmer/Analyst to become more involved in systems design. You must be familiar with and display a thorough knowledge of DBC/DBP, RSTS/E and BASIC+. The company has a lot of development work to be completed in the near future, covering all aspects of commercial applications. Lots of prospects for advancement. Based in the City. Ref. HW/4115

**OCC - BANKING & FIVE FIGURES**  
If you are currently in DBC Analyst/Programmer, with BASIC+/12 experience, preferably with a knowledge of banking - my London based client would like to meet you. They offer the chance to work on the latest DEC/VAX VMS machines, become involved in banking systems and also occasional world-wide travel. They offer an above average salary, combined with free BUPA, STL, 5 weeks' holiday and excellent profit share scheme. Too good to be true - call me now for more details. Ref. HW/2707

**HEWLETT PACKARD - COBOL/SPL TO £9,000**  
Programmers and Analyst/Programmers are required by this expanding financial organisation on the South-East. You will become involved in developing commercial and financial applications to an extremely high standard, whilst expanding your skills. You must have a minimum of 6 months' HP3000 experience using COBOL and/or SPL. Prospects are excellent. Ref. HW/2711

These positions are just a brief selection from our extensive database of jobs in London and the South-East. If you cannot see a position advertised for your particular skills, or are considering re-locating or a change of hardware, a quick phone call will put you in touch with a consultant specialising in your field. 70% of jobs in this industry are never advertised. Why not let us tell you about some of them? We look forward to hearing from you.

## ANALYST/PROGRAMMERS -

**OIBOL** £11,000  
This well-known development organisation based on the Surrey/Berks borders has a requirement for an Analyst/Programmer with either OBC PDP/VAX or System experience to work on their new VAX systems. You must display a sound knowledge of OIBOL and be interested in moving into analysis, dealing with users, etc. I also have similar posts in London and East Surrey areas. Ref. HW/2597

**COBOL PROGRAMMER/ANALYST SURREY** £11,000  
My client, one of the UK's largest and most successful trading groups, are entering a very exciting age in the development of their computing facilities. For Programmers/Analysts with sound COBOL skills the opportunities are exceptional involving projects from initiation to implementation. Experience of thorough large systems is desirable with a minimum of 2 years' programming background and the potential to progress within the company. Flexible, free lunch sports and social facilities are just some of the benefits plus excellent working environment. Ref. MW/4241

**SYSTEMS ANALYST/DESIGNER SURREY** £12,000  
If you have a minimum of 2 years' analysis, preferably within a commercial environment and are looking to develop your skills, my client would like to hear from you. You must be able to work alone or as part of a team, and have designed and implemented at least one real time system through the feasibility stage. The company offer an excellent package and re-location expenses for the right applicant. Ref. HW/4191

**TRAVEL COMPANY MIDLESEX** £9,500  
Interesting opportunity for FORTRAN Programmer to develop your skills in an on-line environment dealing with reservations and travel applications. Initially you will work as a member of a small team and every opportunity for advancement will be available within this expanding D.P. department. The company utilises Perkin Elmer equipment and experience of this machine would be desirable. Benefits include free flights. Ref. MW/4246

## WANG

**SURREY/LONDON TO £10,500**  
Well-established software house currently recruiting for versatile COBOL programmer with a minimum of 18 months' experience on interactive systems. They use various models including WANG VS. This company in return offers interesting development work on various projects. Friendly environment and lots of prospects for self-motivated individuals. Ref. MW/4244

**DATAPoint LONDON** £9,500  
An interesting opportunity has arisen with this major oil company for a Datapoint Programmer with good Datapoint skills. Career opportunities within the group are excellent and they offer a full range of benefits commensurate with a prosperous organisation, plus the chance to eventually train on IBM MVS. Ref. MW/4245

**COBOL PROGRAMMER LONDON** £8-10,000  
An opportunity has arisen for an ambitious programmer to join a progressive multinational organisation based in Central London. They require a minimum of 18 months' recent experience using any structured COBOL knowledge of the UNIVAC 1100 being especially welcome. Just one of the many benefits in joining this company are the fast career prospects and training. If you are educated to graduate level and you are now looking for career advancement within a professional environment contact us now for further details. Ref. MW/2744

**NCR ANALYST/PROGRAMMER MIDLESEX** £11,000  
This large retail company require an experienced Database Programmer, with excellent analytical skills. The essential requirement is for someone with 2 years' + NCR COBOL, preferably with accounts experience. This is an interesting and challenging position with lots of user liaison, so good communication skills are essential. The company offer excellent career prospects and plenty of development projects in the future. Ref. BW/4184

## ICL PROGRAMMER/MOVE INTO ANALYSIS SURREY

**£9,000**  
This large household retail company is seeking a number of additional D.P. staff. If you can offer either 18 months' structured programming with a knowledge of TOTAL and/or RAMIS or over 2 years in an ICL COBOL environment and wish to move into analysis, this could be the post for you. The company offer the applicant the chance to work on a number of different mainframes and plenty of scope to advance to your career. Ref. BW/4233

## HONEYWELL PROGRAMMERS

**£9,000**  
Excellent opportunity for a successful COBOL Programmer to work on new development projects, in a lively environment. Can you offer 2 years' COBOL as a Honeywell L64 site with TDS and on-line experience? Then I am sure you would benefit from a move to this prestigious company, who offer good promotion prospects and mortgage subsidy, life assurance and profit share scheme. Ref. BW/2839

## ICL ME29 PROGRAMMER C.£9,000

I have two companies based in N.W. London offering an Analyst/Programmer with a minimum of 3 years' IBM COBOL with DL/I is essential, whilst CICS would be an advantage. You will be responsible for guiding the team in the technical aspects of DL/I, and developing a range of exciting systems including Point of Sale. Benefits include discount on products, profit sharing scheme and restaurant. Ref. CW/4234

**IBM SYSTEM 3B CITY** £13,000  
Exciting opportunity to get in at the start of a new IBM System 3B installation. Leading City brokers are seeking an Analyst/Programmer with a minimum of 3 years' RPG II or RPG III to take a senior role in the design and development of bespoke financial systems. A degree or equivalent would be advantageous, and the ability to liaise confidently with users. Benefits include BUPA and life insurance. Ref. CW/2792

These positions are just a brief selection from our extensive database of jobs in London and the South-East. If you cannot see a position advertised for your particular skills, or are considering re-locating or a change of hardware, a quick phone call will put you in touch with a consultant specialising in your field. 70% of jobs in this industry are never advertised. Northampton

- ★ Project Leader role
- ★ Expanding Company
- ★ Systems Development
- ★ Career Opportunity

We are a world renowned Company, possessing a range of products and specialist skills that have firmly placed us at the leading edge of our market. Consequently, our order books are continuing to be filled with major contracts from around the world and this, in turn, is demanding further expansion of our facilities in order to achieve our maximum potential.

Such growth, and the necessity to improve our efficiency, requires us to commence a programme of development that incorporates the computing strategy throughout the Company and the introduction of systems to improve and enhance those critical areas that require management control.

Our Hewlett Packard 3000 installation, encompassing the use of MM 3000 and real-time processing, is engaged in major systems development and has now reached the point where an experienced individual is required to fulfill a challenging and progressive role. You will be required to understand our Management Services Manager and in so doing play a major part in project leadership, to enable the implementation of critical systems throughout the production and administration areas of the Company.

We are seeking an individual with the character and personality to assume responsibility at an early stage and to successfully liaise with users throughout the Company. Ideally you should possess Hewlett Packard experience and have followed a career path that encompasses either manufacturing or engineering environments and associated systems. Obviously, experience of Database, COBOL, and MRP would be highly advantageous. Candidates who feel that they have the required background, though perhaps developed on alternative systems, are still encouraged to apply.

Our growth could be the opportunity you have been seeking, to join a developing systems environment, which will lead to career progression over a suitable period. Employment benefits, including relocation assistance where applicable, match the position and Company.

Candidates should apply by telephoning Brian Harris on 021-236 3781 (24-hour answering service) or on 0788 77732 (evenings and weekends until 9pm).

The company offers a very attractive package of benefits and extremely good career opportunities. Married status may also be considered.

# QUALITY OF LIFE... & A CAREER TO MATCH

## There are many sound reasons for a move to the North West

### Consider these benefits:

- Where appropriate our client provides a generous and fully comprehensive relocation scheme.
  - Housing prices offer perhaps the best value for money in the country; this means a better more spacious family home, or cheaper rent for equivalent property.
  - Situated close to the countryside of rural Cheshire yet within easy reach of Manchester, there is a wide range of types of houses and communities in which to live.
  - Some of Britain's most inspiring National Parks and open spaces - including the Lakes, Snowdonia, Peak District are within easy access, made easier by the area's comprehensive motorway network.
  - Educational facilities, both for schooling and further education, are excellent in the area and the cost of living is appreciably lower than in the South.
  - Manchester is highly regarded as a centre for music, art and theatre, and recreational facilities abound - with many squash courts, golf courses and leisure centres within easy reach.
- In summary, you have an opportunity to make a significant improvement to the quality of life for you and your family.

## Hardware and Software Systems Engineers to £15K

Our client is a major force in real-time industrial control and communication and information systems, with exclusively non-military projects under development for clients around the world. Unprecedented international demand for their hardware and software products have created new positions at various levels and across a wide skill range. If you have worked on real-time applications, you must find out more about these exciting career opportunities. ## PUBLIC SECTOR APPOINTMENTS

**SOUTH NORFOLK DISTRICT COUNCIL**

### Post A Programmer/Analyst

Scale 6/SO1 £16,154 to £9,660 p.a.)

### Post B Programmer (Temporary)

(For period of 18 months)

Scale 5/6 (£7,181 to £8,712)

Due to the development of our computer services we have vacancies for experienced Cobol programmers for an ambitious programme of developing on-line and batch systems for the ME29/45 computer and the development of other equipment, including ICL ORS 20/50 micros. All applicants should have a good academic background and personal qualities will include the ability to work to demanding timescales. Experience of RPG2, TME-TP, communications, IOMS and/or DOS will be advantageous. Appropriate training will be provided where necessary.

The posts are based at the modern, open plan Council offices at Long Stratton where working conditions include flexible working hours, staff restaurant and BUPA membership at reduced rates. Relocation expenses may be payable in appropriate circumstances. Application forms, together with further details (please state the post for which you wish to apply) are obtainable from:

Management Services and Personnel Officer,  
South Norfolk District Council, South Norfolk House, Swan Lane, Long Stratton, Norwich NR15 2XE (Tel: Long Stratton (0508) 31122).  
Closing date for applications - Friday, February 17th, 1984. (7573)

**RICHMOND UPON THAMES COLLEGE**  
Egerton Road, Twickenham, Middlesex

**TUTOR ANALYST/PROGRAMMER**  
Lecturer Scale 1

Richmond upon Thames College has an excellent range of computer hardware to provide an educational computer service to students and staff. This includes a PDP11 minicomputer plus many microcomputers. To expand our service we have created the above additional post for the Computer Unit.

Applicants are invited from persons with a solid computing background who are enthusiastic about continuing practical computing with students and staff and teaching Computer Literacy. Although a teaching qualification is desirable it is not essential as teaching training can be provided.

Successful candidates must be willing to act as Collegium tutors, teaching up to two hours of the tutorial curriculum weekly for mixed tutor groups.

Salary Scale: £5,945-£7,735 plus £248 Overtime Weighting Allowance per annum

Further particulars and application forms, returnable within two weeks of the date of this advertisement, may be obtained from the Administrative Assistant, Personnel Section, Richmond upon Thames College, Egerton Road, Twickenham TW2 7BA. (Teletype and e-mail address available only).

**LONDON BOROUGH OF RICHMOND UPON THAMES** (75730)

London Borough of Ealing

Ealing College of Higher Education  
81, Mary's Road, Ealing W5  
£7,816-£8,520 p.a. inclusive

Required to join a team of two other programmers in providing a range of services to academic and administrative users. The centre provides an interactive computing service on Prime 760/660 as well as facilities on BBC and Neph Star micro computers.

Applicants should have a relevant degree and at least two years' practical experience, and preferably a good working knowledge of all systems. Please quote reference ED888. Closing date 17/2/84.

Application forms and further details from the Chief Administrative Officer (T/D/UC), E.C.H.E., St. Mary's Road, London W5 8RF. Telephone: 01 874 4111. (75741)

**GLC**

Working for London

## Computer Applications Manager

### Architecture & Civic Design

The Architects Department's Computer Group is active in a wide range of computer-based administrative financial systems. It is responsible for the largest computer-aided design installation within the European construction industry.

The Manager's role includes establishing forward operational and resource requirements for the Department, carrying out appraisals and feasibility studies and providing technical input to reports. This post also carries responsibility for new technology applications and developments and will involve close liaison with the Central Computer Service.

A broad-based computing background is required, with good communication skills and the capacity to understand and interpret the specific needs of specialist professional areas. This post is suitable for job sharing.

Salary: £24,349-£25,612 inclusive.  
For an application form, to be returned by 17th February 1984, write to: Establishment Director, Department of Architecture and Civic Design, Ref: 017, Greater London Council, Room 469 North Block, The Connaught, SE1 7PB or telephone 01-632 2147.

The GLC welcomes applications from all sections of the community, irrespective of sex, ethnic origin, colour, sexual orientation or disability, if they have the necessary attributes to do the job.

The GLC is an equal opportunities employer.

## Shift leader IBM experience in Brighton

Up to £8883 p.a. inclusive of shift allowance, to lead a team of computer operators on an IBM 4331-2 running under VM/SP with DOS/VSE, POWER, CICS, DL1 and CMS.

You should have considerable technical expertise and applications are particularly welcome from those with experience of our equipment and software, but we require a minimum of 18 months' operations experience. Preference will be given to those with supervisory skills or experience.

Two shift system, early start at 07.30 and finish up to 23.30. Generous relocation allowances include a grant of up to £3750 plus full reimbursement, removal costs, lodging and travelling allowances.

Please telephone Brighton (0273) 29801 extension 466 for an application form or write to the Borough Treasurer, PO Box 4, Town Hall, Brighton BN1 1JA.  
Closing date 17th February. (75681)

**LEICESTER POLYTECHNIC**  
Posts in Information Technology

Leicester Polytechnic is a leading group of Polytechnics in the development of innovative courses in information technology, based on a new and exciting range of computer systems.

**PRINCIPAL LECTURER** (Scale 6/5)  
This is a full-time post in a leading department in the development of innovative courses in information technology, based on a new and exciting range of computer systems. The post involves a range of responsibilities including the development of new courses, the supervision of staff, and the management of the department. The successful candidate will be responsible for the development of new courses, the supervision of staff, and the management of the department. The successful candidate will be responsible for the development of new courses, the supervision of staff, and the management of the department.

**LECTURER II Communications Systems**  
This post involves a range of responsibilities including the development of new courses, the supervision of staff, and the management of the department. The successful candidate will be responsible for the development of new courses, the supervision of staff, and the management of the department.

For further details and application forms please call our 24 hour telephone answering service 0532 323128 or write enclosing a stamped addressed envelope to Mr. R. G. Smith, Administrative Assistant (Recruitment), Newcastle upon Tyne Polytechnic, Elwell Place, Newcastle upon Tyne NE1 6ST, to whom completed forms should be returned quoting the reference number by February 17th. (75645)

**SHEFFIELD CITY POLYTECHNIC**  
COMPUTER SERVICES DEPARTMENT  
**PROGRAMMER (SYSTEMS PROGRAMMING SECTION)**  
Scale 5/6 £7,191-£8,712

A Programmer is needed to work as a member of a team responsible for operating system support on the IBM 4341 under VM/CMS. The team is also involved in support of microcomputer systems software and data communications.

Applicants should have previous systems support experience, including IBM 370 Assembly language programming, and should preferably have a degree level qualification.

APPLICATION FORMS AND FURTHER DETAILS FROM THE PERSONNEL DEPARTMENT, SHEFFIELD CITY POLYTECHNIC, HALFORDS HOUSE, 14 FETTERALL SQUARE, SHEFFIELD S1 2BB. TEL: 0742 20911, EXT. 2281. PLEASE QUOTE POST NO. 6825. CLOSING DATE FEBRUARY 17th.

Sheffield City Polytechnic is an equal opportunities employer. (75646)

**HALTON BOROUGH COUNCIL**  
Chief Finance Officers Dept Post Number 87

**Operations and Network Controller**  
Grade SO 1/2 - £9,060 - £10,539

Applications are invited for the above position which is based in the municipal building, Widnes. It is a new post, reporting to the Computer Manager. For the post, the successful candidate will be responsible for the operation and maintenance of the Council's computer system, including the mainframe, data control and terminal network. The Council provides a service not only to its own departments but also to Warrington and Halton Development Corporation. The Council has recently installed an ME 29 model 84 computer, supporting a considerable terminal network at several locations. Several years experience in a Computer Operations Department is required, preferably on ICL ME 29 equipment. A sound knowledge of hardware, software and communications is essential, whilst experience of the management and control of staff is desirable. Application forms and job descriptions may be obtained from the Head of Personnel and Administration Services (Tel: 051-428 2051, ext. 148) and should be returned no later than 12th February, 1984. (75651)

## POLICE COMPUTING - MANCHESTER

up to £11,703

Greater Manchester Police is one of the largest forces in the country with a comprehensive programme of computerisation.

The Force is currently installing a major computer system based on Tandem hardware incorporating criminal records, message switching and an associated data network linking Headquarters to divisions and sub-divisions.

The Force is also in the process of installing, developing or planning a number of other administrative and operational systems.

To play an important role in these developments there are a number of posts:

**SYSTEMS ANALYST** P01/2  
**ANALYST/PROGRAMMER** P01  
**PROGRAMMER** S01/2

Salaries within the range £9,060-£11,703.

The Systems Analyst will work on departmental management systems. Experience of mini and microcomputer systems is desirable and implementation experience must be demonstrable. About six years' D.P. experience is required.

The Analyst/Programmer will work on operational systems. You should have experience of large databases using fast response on-line systems, together with about four years' D.P. experience.

The Programmer will assist the above posts. Experience of a commercial language is essential and the use of a microcomputer language would be desirable.

The posts, although on the County Treasurer's establishment, are within the Police Computer Projects Branch which is based at Force Headquarters in Trafford, Manchester. For an informal discussion phone Andy Softley, Project Leader, on 061-872 5050 extn. 2782.

Application form, job description and further details available from the County Treasurer, Greater Manchester Council, Piccadilly Gardens, Manchester M60 3HR.

Closing date 15th February 1984. (75646)

**NEWCASTLE UPON TYNE POLYTECHNIC**  
COMPUTER UNIT

**PROGRAMMER/ANALYST** (Scale 5/6)  
Ref. No: APC 5/84

To design, specify and implement computer programs and packages across a wide range of applications. Candidates will be assessed on a combination of a degree, professional qualification and relevant experience.

NJC Salary and Conditions £7,181-£8,712 per annum.

For further details and application forms please call our 24 hour telephone answering service 0532 323128 or write enclosing a stamped addressed envelope to Mr. R. G. Smith, Administrative Assistant (Recruitment), Newcastle upon Tyne Polytechnic, Elwell Place, Newcastle upon Tyne NE1 6ST, to whom completed forms should be returned quoting the reference number by February 17th. (75645)

**UNIVERSITY OF LIVERPOOL**  
Department of Computer Science

**EXPERIMENTAL OFFICER**

Join small team which provides software and hardware support for teaching and research. Experience of local area networks, assembly language programming, UNIX, Algol 68, or Pascal particularly welcome.

Candidates should possess an Honours degree in Computer Science, or have appropriate equivalent professional qualifications.

Salary within range £6,310-£8,530 per annum.

Application forms may be obtained from the Registrar, The University, P.O. Box 147, Liverpool L69 3BX. Quote Ref: W/25/84. (75639)

**NHS Computing - PROJECT LEADERS**  
Grade: Scale 14

Salary £2,404-£21,434 (new entrants to the NHS normally commence on the minimum of the salary scale).

The management Services Division of the West Midlands Regional Health Authority is responsible for many computing projects both within the Region and nationally, using GLC mainframe computers and a wide variety of mini and micro computers. These projects require experienced professional project leaders who are capable of coordinating teams of analysts and programmers who have the ability to plan and execute high quality work under pressure with different client groups within the NHS. Vacancies have arisen for such staff, based in Birmingham. If you feel that your career has led you to the position where you can handle real responsibility, please send now for an application form from: West Midlands Regional Health Authority, Personnel Division, 1st floor, Cumberland House, 200 Broad Street, Birmingham B15 1SW. Tel: 021-643 5781, ext. 41. Closing date for receipt of completed applications, February 23rd, 1984. (75638)

## PROGRAMMING PROFESSIONALS

LSI Logic Limited (a leader in the design and manufacture of custom and semi-custom integrated circuits) has established a design centre and development laboratory in Bracknell. There are immediate openings for qualified professionals seeking a career in state of the art software development.

## Our requirements include:

- BSc or Higher Degree in Computer Science or related field.
- Familiarity with modern programming languages (PASCAL, C, PL/1).
- Strong background in compiler design and implementation.
- Familiarity and experience with IBM/370 architecture and instruction set and the VM/370 operating system.

This group will initially be engaged in development of a new compiler for the C language to operate efficiently in the IBM/370 environment under the VM/370 operating system. Emphasis will be placed on compatibility with other C compilers (UNIX, VAX/VMS, etc.) and efficiency of generated code. Experienced individuals are required for both the 'front end' (Syntax Analysis and Parsing) and 'back end' (Code Generation and Optimisation) portions of the project.

Individuals selected for these positions will spend several weeks at LSI Logic Corporation in California to become familiar with the LDS (LSI Design System) and the technical requirements of the project. It is planned that the Bracknell Development Laboratory will make major contributions to LSI Logics ongoing worldwide CAD capabilities.

LSI Logic is in the forefront of both IC technology and design automation software and believes in providing a well-supported environment for its programming staff. Our Bracknell Design Centre includes an on-site Amdahl V8 computer running the VM/370 operating system, with a dedicated, locally attached 3270 compatible terminal provided for each programmer. In addition, a satellite links the Bracknell Design Centre to the main computer facility (an IBM 3081K) in California's 'Silicon Valley'.

If you have the qualifications for these positions, please send your résumé to:

Sylvia Davidson, General Manager  
LSI LOGIC LIMITED  
Grenville Place, The Ring  
Bracknell, Bucks RG12 1BP

## MICROCOMPUTERS

# SALES AND SALES SUPPORT

### THIS COULD BE THE START OF SOMETHING BIG!

Probably the most sought after job opportunities as far as accomplished and ambitious salespeople are concerned is the chance to join a major foreign company with an outstanding product range who is just setting-up in the U.K. The implications of the 'ground floor opportunity' are obvious. However it is not very often that such a situation occurs involving a multi-national company with revenues in excess of £500 millions and employing over 25,000 people worldwide!

So determined is our client to succeed, that the investment in U.K. manufacturing facilities has trebled within the last two years. Early success has already been achieved and the product/quality performance may be judged by its rapid revenue growth.

This company is about to launch a powerful range of home and business microcomputers with performance and prices that will amaze you, supported by application packages and a comprehensive range of languages, system utilities and operating software.

Requirements now exist!

## THROUGHOUT THE U.K.

## AREA SALES MANAGERS

Candidates should be directly experienced and successful salespeople who are currently selling microcomputers to Dealers, Distributors, Specialist Computer Retailers, Major End-Users, etc. They will be self-motivated and industrious individuals, able to create and implement sales strategy and manage a small team of sales and technical support people. An attractive compensation package will be offered including a guarantee against commission earnings and a company car is provided. Territories are available throughout the U.K.

## SALES SUPPORT ANALYSTS

Candidates should have substantial experience of either the business or home microcomputer market and be able to handle the technical requirements of distributors, retailers and large-scale end-users. Knowledge of CPM and BASIC is essential and fluency in commercial applications will be advantageous. Opportunities exist throughout the U.K., an attractive salary will be paid and a company car is provided.

## SALES TRAINEES

These opportunities will appeal to those young people with obvious flair for selling who have significant experience of utilising microcomputers or are already involved in marketing or merchandising to distributors, retailers, etc. The job entails the provision of sales and marketing support, including the operation of varied promotional campaigns to a wide selection of clients and reports to the local Area Sales Manager. Opportunities exist throughout the U.K., an attractive salary will be paid and a company car is provided.

All these excellent job opportunities carry considerable fringe benefits, a company pension, but above all they offer considerable potential for job satisfaction, high earnings and career advancement.

Please provide complete career details to Roger Dodd (Midlands and North) and Lindsay Howie (South) quoting reference SDB/024.

## SALES BIT

Quality of Management - 81

# Know-how is not enough - you need to pass it on

A REGULAR arrival at Sales and Marketing Recruiters is the aspiring sales trainee; young people trying to get into selling.

Many come to us in the hope of getting into the computer industry; others simply due to the frustration of being unable to obtain basic sales training within their own company.

More often than not, we are unable to offer them any direct opportunities of employment, but we are always happy to point them towards those companies which have the resources, commitment and long-standing reputation of providing effective selling training for people who are new to selling.

Among those we normally recommend as having the best understanding of the fundamental needs of such people are British Olivetti, Burroughs, Kalamazoo and Rank Xerox, all of which have

and inadequacy. Occasionally some get lucky and take over from a sales manager who has left in order to continue his climb to further stardom, leaving behind him a well-trained, highly motivated and disciplined team.

Much more likely, however, is that the manager departed because the managing director thought it might be a good idea.

So there you are, with your motley crew, 'til head-hunter or size 10 boot do you part. So what comes next?

For a start you need to make sure everybody in the team is singing from the same hymn book. Everyone must have a clear understanding of the marketplace, the product, the competition, and above all the way your particular product should be sold relative to the personality of the individual.

You need to make sure everyone in the team is singing from the same hymn book. Everyone must have a clear understanding of the marketplace, the product, the competition, and above all the way your particular product should be sold relative to the personality of the individual.

For many years provided an excellent breeding ground for computer industry salespeople.

So I was extremely surprised to receive a telephone call the other day from an employee of one of these companies asking if we could provide her with some sales training. Talk about snails to Newcastle!

It transpired that we were discussing a classic sales management shortfall - that is, the lack of acceptance, or realisation that sales training (like recruitment) is a continuing process, that well established and proven salespeople have as great, albeit different, a need as new recruits for training.

Continuous training is a fundamental part of their professional occupation.

For many companies, sales training is something one is obliged to give to trainees and new recruits, and even then it is a task preferably offloaded to an external agency if at all possible.

Continuity and commitment don't come into it. It is treated more like an unavoidable nuisance than an integral and stimulating part of sales management.

The caller explained that she was selling an excellent and highly technical product for a first-class company with which she had been employed for many years and where she was happy to continue.

The only problem was that for its established salespeople replenishment sales training was non-existent, and competition and product-related training occurred only when it could not be put off any longer.

This she found not only demotivating, but a considerable handicap within a competitive marketplace.

This prompted me to relate to the subject of training, having spent some time in discussing the merits of field training.

Few sales managers have the good fortune and experience of setting up a sales team from scratch. More often than not they take over a legacy of management neglect

about it. Whether you use an external agency or do it yourself, it is not as important as establishing what kind of training is needed and assessing the commitment to do it.

This training should be relevant, not only now, but on a continuing basis for the foreseeable future.

In other words, don't merely think about the training that is required now. Consider also what will be needed throughout the coming year.

In the educational process, merely having the information is not sufficient in itself. Knowing how to convey it to others is what really counts.

Teaching is a very special skill that should not be underrated but respected.

The principal areas of training for salespeople are product knowledge, selling skills, knowing the competition, and knowing the customer.

Next week I would like to continue by highlighting some of the primary considerations related to these key areas, as they apply to the growth of the individual salesperson.

Alan Williams

## PUZZLE ANSWER

IT is clear that whichever man served first he could not have won all five of his service games, since this would allow for no 'breaks' by his opponent. So it is fair to assume that the first server won only 4 of his service games - and fair also to say that he must have won some (say 2) of the other four games. This gives a total of (4+2)=6 for the number of games lost by both servers together. But this total is known to equal 5, so must actually equal 4. The inference therefore is that the first server must have won an even number of games, and so it must have been X who served first.

# CROSSWORD

## Prize Crossword No 49

Compiled by Alec Robins

A prize of £10 will be awarded for the first correct entry opened. The second and third solutions opened will receive £5 each. Entries to Crossword Competition, Computer Weekly, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS, by first post Friday, February 10. Please use a ballpoint pen to complete the crossword, and include a telephone number at which you can be reached during the daytime.

Name ..... (Miss, Mrs, Ms, Mr)

# PROGRAMMING PROFESSIONALS

LSI Logic Limited (a leader in the design and manufacture of custom and semi-custom integrated circuits) has established a design centre and development laboratory in Bracknell. There are immediate openings for qualified professionals seeking a career in state of the art software development.

Our requirements include:

- BSc or Higher Degree in Computer Science or related field.
- Familiarity with modern programming languages (PASCAL, C, PL/1).
- Strong background in compiler design and implementation.
- Familiarity and experience with IBM/370 architecture and instruction set and the VM/370 operating system.

This group will initially be engaged in development of a new compiler for the C language to operate efficiently in the IBM/370 environment under the VM/370 operating system. Emphasis will be placed on compatibility with other C compilers (UNIX, VAX/VMS, etc.) and efficiency of generated code. Experienced individuals are required for both the 'front end' (Syntax Analysis and Parsing) and 'back end' (Code Generation and Optimisation) portions of the project.

Individuals selected for these positions will spend several weeks at LSI Logic Corporation in California to become familiar with the LDS (LSI Design System) and the technical requirements of this project. It is planned that the Bracknell Development Laboratory will make major contributions to LSI Logic's ongoing worldwide CAD capabilities.

LSI Logic is in the forefront of both IC technology and design automation software and believes in providing a well-supported environment for its programming staff. Our Bracknell Design Centre includes an on-site Amdahl V8 computer running the VM/370 operating system, with a dedicated, locally attached 3270 compatible terminal provided for each programmer. In addition, a satellite links the Bracknell Design Centre to the main computer facility (an IBM 3081K) in California's 'Silicon Valley'.

If you have the qualifications for these positions, please send your résumé to:

Svein Davidson, General Manager  
LSI LOGIC LIMITED  
Grenville Place, The Ring  
Bracknell, Bucks RG12 1BP

## We've got the right reasons for going contract...

Whether you're an established contractor already, or contemplating going contract for the first time, the excellent salary rates are an obvious attraction. However, we at Lorien believe there are many other good reasons for going contract - the right reasons. Many of our contractors have been with us for several years, and with good reason. Our large blue chip client base can provide a high level of security, tremendous variety and ensure that technically you keep abreast of advances within the industry - and our highly experienced consultants match your skills to the right contract. Why not discover the reasons for yourself? Lorien are so good for contractors!

### Southern Contracts

IBM System 36  
PROGRAMMER Branch speaking PARIS  
PROGRAMMER RPG III for Bank in the City  
PROGRAMMER RPG III Commercial  
LONDON  
PROGRAMMER RPG III Commercial  
SOUTH, WALES, MIDLANDS

# SMR

Sales & Marketing Recruiters Ltd

Leaders in High Technology Recruitment

## MICROCOMPUTERS

# SALES AND SALES SUPPORT

### THIS COULD BE THE START OF SOMETHING BIG!

Probably the most sought after job opportunities as far as accomplished and ambitious salespeople are concerned is the chance to join a major foreign company with an outstanding product range who is just setting-up in the U.K. The implications of the 'ground floor opportunity' are obvious. However it is not very often that such a situation occurs involving a multi-national company with revenues in excess of £500 millions and employing over 25,000 people worldwide!

So determined is our client to succeed, that the investment in U.K. manufacturing facilities has trebled within the last two years. Early success has already been achieved and the product/quality performance may be judged by its rapid revenue growth.

This company is about to launch a powerful range of home and business microcomputers with performance and prices that will amaze you, supported by application packages and a comprehensive range of languages, system utilities and operating software.

Requirements now exist

### THROUGHOUT THE U.K.

## AREA SALES MANAGERS

Candidates should be directly experienced and successful salespeople who are currently selling microcomputers to Dealers, Distributors, Specialist Computer Retailers, Major End-Users, etc. They will be self-motivated and industrious individuals, able to create and implement sales strategy and manage a small team of sales and technical support people. An attractive compensation package will be offered including a guarantee against commission earnings and a company car is provided. Territories are available throughout the U.K.

## SALES SUPPORT ANALYSTS

Candidates should have substantial experience of either the business or home microcomputer market and able to handle the technical requirements of distributors, retailers, and large-scale end-users. Knowledge of CPM and BASIC is essential and fluency in commercial applications will be advantageous. Opportunities exist throughout the U.K., an attractive salary will be paid and a company car is provided.

## SALES TRAINEES

These opportunities will appeal to those young people with obvious flair for selling who have significant experience of utilising microcomputers or are already involved in marketing or merchandising to distributors, retailers, etc. The job entails the provision of sales and marketing support, including the operation of varied promotional campaigns to a wide selection of clients and reports to the local Area Sales Manager.
